Burnout is common among doctors in the West, so one might assume that a medical career in Malawi, one of the poorest countries in the world, would place far greater strain on the idealism that drives many doctors. But, as *A Heart for the Work* makes clear, Malawian medical students learn to confront poverty creatively, experiencing fatigue and frustration but also joy and commitment on their way to becoming physicians. The first ethnography of medical training in the global South, Claire L.

Wendland's book is a moving and perceptive look at medicine in a world where the transnational movement of people and ideas creates both devastation and possibility. Wendland, a physician anthropologist, conducted extensive interviews and worked in wards, clinics, and operating theaters alongside the student doctors whose stories she relates. From the relative calm of Malawi's College of Medicine to the turbulence of training at hospitals with gravely ill patients and dramatically inadequate supplies, staff, and technology, Wendland's work reveals the way these young doctors engage the contradictions of their circumstances, shedding new light on debates about the effects of medical training,

Beyond simulation and algorithm development, many developers increasingly use MATLAB even for product deployment in computationally heavy fields. This often demands that MATLAB codes run faster by leveraging the distributed parallelism of Graphics Processing Units (GPUs). While MATLAB successfully provides high-level functions as a simulation tool for rapid prototyping, the underlying details and knowledge needed for utilizing GPUs make MATLAB users hesitate to step into it.

Accelerating MATLAB with GPUs offers a primer on bridging this gap. Starting with the basics, setting up

Yoga today connotes many images and ideas -- from holy men on a high mountaintop to throngs of young women toting designer mats. Yoga, meaning 'union,' is actually a many-layered discipline designed to help an individual attain health, serenity, focus, and ultimately, union with the Divine. Aleister Crowley was one of the first Europeans to practice yoga and believed the practice was essential to spiritual growth, stating that 'Magick is a Pyramid built layer by layer. The work of the Body of Light -- with the technique of Yoga -- is the foundation of the whole.' This succinct and uniquely helpful book explores the frequently overlooked importance of bringing a healthy body and a clear-thinking mind to the practice of ceremonial magick or Wicca. While many books on magick discuss the importance of ritual, almost none point to the physical, spiritual, and moral quality necessary to make those rituals effective. Spiritual power demands physical health and the contemporary western practitioner can learn much from the ancient tradition of yoga.

How much risk should we take? A Short Guide to Risk Appetite sets out to help all those who need to decide how much risk can be taken in a particular risky and important situation. David Hillson and Ruth Murray-Webster introduce the RARA Model to explain the complementary and central roles of Risk Appetite and Risk Attitude, and along the way they show how other risk-related concepts fit in. Risk thresholds are the external expression of inherent risk appetite, and the challenge is how to set the right thresholds. By progressively deconstructing the RARA Model, the authors show that the essential control step is our ability to choose an appropriate risk attitude. The book contains practical guidance to setting risk thresholds that take

proper account of the influences of organisational risk culture and the individual risk preferences of key stakeholders. Alongside this, individuals and organisations need to choose the risk attitude that will optimise their chances of achieving the desired objectives.

Most of the world's major hotel and resort developers now operate timeshare properties. Firms like Marriott, Hilton, Hyatt, Disney and Ramada have brought a new formality and legitimacy to timeshare development and operation. *

This is not a book geared to one branch of activity – like gestalt group therapy, or organization development, or applications to management. The papers assembled here embrace a whole variety of practice settings and areas of professional endeavour: organisations, training groups, communities, national groupings, life - focus groups, as well as (of course) the special case of two people working together, in the relational fields of group facilitator–participant, or of consultant–consultee, or of teacher–student, all or which are fields within fields. Co-written by the author of the best-seller *An Aid to the MRCP Short Cases* this new, systematically organized text concentrates on examples that are frequently examined in the MRCP Part 2 written examination - saving candidates time during revision and enabling them to concentrate on weaker specialities. Since hardware and software-based design and implementation approaches can be applied to Chua's circuits, these circuits are also excellent educative models for studying and experimenting nonlinear dynamics and chaos. This book not only presents a collection of the author's published papers on design, simulation and implementation of Chua's circuits, it also provides a systematic approach to practising chaotic dynamics.
