This book analyzes the regulatory framework that Russia has developed to attract private capital and technology in the modernization of the electricity infrastructure. Comparing Russian and EU electricity law, the book identifies regulatory risks and examines investors’ protection under Russian and international investment law.

The comprehensive guide to working more effectively within the multi-commodity market. The Handbook of Multi-Commodity Markets and Products is the definitive desktop reference for traders, structurers, and risk managers who wish to broaden their knowledge base. This non-technical yet sophisticated manual covers everything the professional needs to become acquainted with the structure, function, rules, and practices across a wide spectrum of commodity markets. Contributions from a global team of renowned industry experts provide real-world examples for each market, along with tools for analyzing, pricing, and risk managing deals. The discussion focuses on convergence, including arbitrage valuation, econometric modeling, market structure analysis, contract engineering, and risk, while simulated scenarios help readers understand the practical application of the methods and models presented. Gradual deregulation and the resulting increase in diversity and activity have driven the evolution of the traditionally segmented market toward integration, raising important questions about opportunity identification and analysis in multi-commodity deals. This book helps professionals navigate the shift, providing in-depth information and practical advice. Structure and manage both simple and sophisticated multi-commodity deals Exploit pay-off profiles and trading strategies with a diversified set of commodity prices Develop more accurate forecasting models by considering additional metrics Price energy products and other commodities in segmented markets with an eye toward specific structural features As one of the only markets strong enough to boom during the credit crunch, the commodities markets are growing rapidly. Combined with increasing convergence, this transition presents potentially valuable opportunities for the development of a robust multi-commodity portfolio. For the professional seeking deeper understanding and a more effective strategy, the Handbook of Multi-Commodity Markets and Products offers complete information and expert guidance.

Is Brexit the beginning of the end for the EU? Fully updated and revised, this new edition of John R. Gillingham’s swingeing study explains why the European Union is so profoundly unsuited to the modern political economy. In a devastating historical account of political failure, he takes readers back to the union’s postwar origins, when it was considered the best means to guarantee peace, demonstrating how the flaws of the institution date to its origins. Today, these inherent failings leave it unable to deal with the most pressing issues of our time: the refugee crisis, Britain’s exit, the foundering eurozone, and the increasing disquiet among its member states. In a globalised marketplace where technological innovation transcends state boundaries, the EU is no longer fit for purpose. It is time to let the union dissolve.

This book is a theoretically rich and empirically grounded account of UK trade union engagement with climate change over the last three decades. It offers a rigorous critique of the mainstream neoliberal and ecological modernisation approaches, extending the concepts of Marxist social and employment relations theory to the climate realm. The book applies insights from employment relations to the political economy of climate change, developing a model for understanding trade union behaviour over climate matters. The strong interdisciplinary approach draws together lessons from both physical and social science, providing an original empirical investigation into the climate politics of the UK trade union movement from high level officials down to workplace climate representatives, from issues of climate jobs to workers' climate action. This book will be of great interest to students and researchers in environmental politics, climate change and environmental sociology.

Increases in cereal prices can have adverse effects on poor net food buyers. This is a particular problem in Ethiopia because of frequent natural calamities – especially droughts – that lead to significant price hikes. Conversely, falling domestic prices of some cereals (especially maize), typically at harvest time, can be detrimental to producers who are net sellers. Price stabilization efforts are therefore an important consideration for Ethiopian policy makers. This paper sheds light on options for cereal price stabilization in Ethiopia drawing on experiences

This book gathers international and national reports from across the globe on key questions in the field of antitrust and intellectual property. The first part discusses the application of competition law to online sales platforms, which is increasingly a focus for anti-trust authorities around the world. A detailed international report explores which are the major challenges for competition law generated by the growth of online platforms. It provides an excellent comparative study of this complex and challenging subject. The second part of the book gathers contributions from various jurisdictions on the topic "To what extent do current exclusions and limitations to copyright strike a fair balance between the rights of owners and fair use by private individuals and others?" This section presents an international report, which offers an unparalleled comparative analysis of this topic, bringing together common themes and contrasting the various national provisions dealing with exceptions to copyright, amongst other things. The book also includes the resolutions passed by the General Assembly of the International League of Competition Law (LIDC) following a debate on each of these topics, which include proposed solutions and recommendations. The LIDC is a long-standing international association that focuses on the interface between competition law and intellectual property law, including unfair competition issues.

This is the official record of the report of the Statistical Commission on its forty-fifth session for the period of 4-7 March 2014. As well as taking stock of the current and proposed legal instruments, the book looks at the wider policy and economic aspects of coping with climate change. It provides a comparative overview of key issues across Europe, the United States, Asia-Pacific. The Asian Development Outlook 2014 projects that developing Asia's growth will increase from 6.1% in 2013 to 6.2% in 2014 and 6.4% in 2015. Moderating growth in the People's Republic of China as its economy adjusts to more balanced growth will offset to some extent the stronger demand expected from the industrial countries as their economies recover. Risks to the outlook have eased and are manageable. The monetary policy shift in the United States may invite some volatility ahead in financial markets, albeit mitigated by accommodative monetary policy in Japan and the euro area. The regional growth outlook depends on continued recovery in the major industrial economies and on the People's Republic of China managing to contain internal credit growth smoothly. Widening income gaps in developing Asia strengthens the case for greater use of fiscal policy to foster equality of opportunity. While the region has benefited from fiscal prudence in the past, demographic and environmental challenges are expected to compete for public resources in the coming years. To boost public spending on equity-enhancing programs such as education and health without undermining fiscal sustainability, the authorities will need to explore a wide range of options for mobilizing revenue and to build equity objectives into their fiscal plans.

Energy security is a burning issue in a world where 1.4 billion people still have no access to electricity. This book is about finding solutions for energy security through the international trading system. Focusing mainly on the European Union as a case study, this holistic and comprehensive analysis of the existing legal and geopolitical instruments strives to identify the shortcomings of the international and EU energy trade governance systems, concluding with the notion of a European Energy Union and what the EU is politically prepared to accept as part of its unified energy security.

This fully updated book offers a compact and accessible account of EU intellectual property (IP) law and policy. The digital age brings many opportunities, but also presents continuing challenges to IP law as the EU's programme of harmonisation unfolds. As well as addressing the main IP rights (copyright, patents, designs, trade marks and related rights), the book also considers IP's relationship with the EU's rules on free movement of goods and competition, as well as examining the enforcement of IP rights. Taking account of numerous changes, this timely second edition covers the substantive provisions and procedures which apply throughout the EU, making extensive reference to the case law. The author considers how the exploitation of IP is increasingly global; harmonisation, in contrast, is only partial, even at the EU level. In response, the book sets EU IP law in its wider international context. It also seeks to highlight policy issues and arguments of relevance to the EU, in its relations both within the Union and with the rest of the world. Designed as a compact and approachable account of these difficult and technical areas, and with advice on further reading and research, this unique book is useful both as a work of reference and for more general study. It is essential reading for postgraduate students, academic researchers and legal practitioners alike.

The pace of recovery has disappointed in recent years, and downside risks have increased, including from heightened geopolitical tensions. These increased risks make it a priority to raise actual and potential growth. In a number of economies, an increase in public infrastructure investment can also provide support to demand and help boost potential output. And in advanced economies as well as emerging and developing economies there is a general, urgent need for structural reforms to strengthen growth potential or make growth more sustainable. The four individual chapters examine the overall global outlook, the prospects for individual countries and regions, the benefits of increased public infrastructure investment in terms of raising output, and the extent to which global imbalances have narrowed significantly since their peak in 2006.

This contextual analysis of Islamic financial law challenges our understanding of both Islamic law and global financial markets.

The Economic Survey of Latin America and the Caribbean 2014 looks at how economic growth in the region has been slowing since 2011, and the data available for the first six months of 2014 indicate that the region will not match the growth rate of 2.5% recorded in 2013. Growth has been muted over the first few months of the year, owing to stagnant gross fixed capital formation and faltering private consumption. Government consumption, on the other hand, has picked up, and the net contribution of exports has been more positive than during the same period of the previous year. A regional growth rate of 2.2% is forecast for 2014.

Within the framework of globalization from below, this multi-disciplinary collection addresses important phenomena of social change across the African continent and in China that have resulted from intensifying interactions between Chinese and African social and economic actors since the early 2000s.
