'Rofé's book is a unique scientific contribution to the understanding of psychopathological phenomena. He does more to unravel the mystery of the underlying causes of psychological disorders than we've seen in a long time. His book *The Rationality of Psychological Disorders* is a 'true endeavor that presents a definite challenge to the scientific community of Psychology'. This book is a must-read for scientists, mental health professionals and others who search for the logic and rationale in the irrational and bizarre.' Elizabeth F. Loftus, University of Washington, Past President, American Psychological Society. 'The notion of repression is crucial to many psychological theories, but serious questions have been raised about it. Indeed, some investigators have questioned whether repression even exists. In this book, Professor Rofé offers provocative ideas concerning repression and its role in psychopathology in general. His ideas merit attention and I can highly recommend his book for both researchers and clinicians.' David S. Holmes, Chancellor and Distinguished Professor, University of Kansas.

Rumination (recyclic negative thinking), is now recognised as important in the development, maintenance and relapse of recurrence of depression. For instance, rumination has been found to elevate, perpetuate and exacerbate depressed mood, predict future episodes of depression, and delay recovery during cognitive therapy. Cognitive therapy is one of the most effective treatments for depression. However, depressive relapse and recurrence following cognitive therapy continue to be a significant problem. An understanding of the psychological processes which contribute to relapse and recurrence may guide the development of more effective interventions. This is a major contribution to the study and treatment of depression which reviews a large body of research on rumination and cognitive processes, in depression and related disorders, with a focus on the implications of this knowledge for treatment and clinical management of these disorders. * First book on rumination in depressive and emotional disorders * Contributors are the leaders in the field * First editor is a rising researcher and clinician with specialist interest in depression, and second editor is world renowned for his work on cognitive therapy of emotional disorders

Comprehensive in breath and textbook in depth, the

Encyclopedia of Adolescence – with entries presented in easy-to-access A to Z format – serves as a reference repository of knowledge in the field as well as a frequently updated conduit of new knowledge long before such information trickles down from research to standard textbooks. By making full use of Springer’s print and online flexibility, the Encyclopedia is at the forefront of efforts to advance the field by pushing and creating new boundaries and areas of study that further our understanding of adolescents and their place in society. Substantively, the Encyclopedia draws from four major areas of research relating to adolescence. The first broad area includes research relating to "Self, Identity and Development in Adolescence". This area covers research relating to identity, from early adolescence through emerging adulthood; basic aspects of development (e.g., biological, cognitive, social); and foundational developmental theories. In addition, this area focuses on various types of identity: gender, sexual, civic, moral, political, racial, spiritual, religious, and so forth. The second broad area centers on "Adolescents’ Social and Personal Relationships". This area of research examines the nature and influence of a variety of important relationships, including family, peer, friends, sexual and romantic as well as significant nonparental adults. The third area examines "Adolescents in Social Institutions". This area of research centers on the influence and nature of important institutions that serve as the socializing contexts for adolescents. These major institutions include schools, religious groups, justice systems, medical fields, cultural contexts, media, legal systems, economic

structures, and youth organizations. "Adolescent Mental Health" constitutes the last major area of research. This broad area of research focuses on the wide variety of human thoughts, actions, and behaviors relating to mental health, from psychopathology to thriving. Major topic examples include deviance, violence, crime, pathology (DSM), normalcy, risk, victimization, disabilities, flow, and positive youth development.

This review of recent evolutionary theories on psychopathology takes on controversies and contradictions both with established psychological thought and within the evolutionary field itself. Opening with the ancestral origins of the familiar biopsychosocial model of psychological conditions, the book traces distinctive biological and cultural pathways shaping human development and their critical impact on psychiatric and medical disorders. Analyses of disparate phenomena such as jealousy, social anxiety, depressive symptoms, and antisocial behavior describe adaptive functions that have far outlasted their usefulness, or that require further study and perhaps new directions for treatment. In addition, the book's compelling explorations of violence, greed, addiction, and suicide challenge us to revisit many of our assumptions regarding what it means to be human. Included in the coverage:

- Evolutionary foundations of psychiatric compared to non-psychiatric disorders.
- Evolutionary psychopathology, uncomplicated depression, and the distinction between normal and disordered sadness.
- Depression: is rumination really adaptive?
- A CBT approach to

coping with sexual betrayal and the green-eyed monster. - Criminology's modern synthesis: remaking the science of crime with Darwinian insight. - Anthropology: the abiding malady of the species. With its wealth of interdisciplinary viewpoints, *The Evolution of Psychopathology* makes an appropriate supplementary text for advanced graduate courses in the evolutionary sciences, particularly in psychology, biology, anthropology, sociology, and philosophy.
