This volume connects the evolving modern financial systems of China, Japan, and Korea to the development and growth of their economies through the first decade of the twenty-first century. It also identifies the commonalities among all three systems while accounting for their social, political, and institutional differences. Essays consider the reforms of the Chinese economy since 1978, the underwhelming performance of the Japanese economy since about 1990, and the growth of the Korean economy over the past three decades. These economies engaged in rapid catch-up growth processes and share similar economic structures. Yet while domestic forces have driven each country's financial trajectory, international short-term financial flows have presented opportunities and challenges for them all. The nature and role of the financial system in generating real economic growth, though nuanced and complex, is integral to these countries. The result is a fascinating spectrum of experiences with powerful takeaways.

Seminar paper from the year 2003 in the subject Business economics - Accounting and Taxes, grade: 1,7 (A-), Technical University of Braunschweig (Economics - Controlling), course: Intenational Accounting, 20 entries in the bibliography, language: English, abstract: Some years before the financial scandal of Enron, which was mainly caused by the misuse of derivatives, the Financial Accounting Standard Board (FASB) began deliberating on issues related to derivatives and hedging transactions.¹ The cause of thinking about changes in accounting for derivatives was a problematic situation in 1986 (comparable to current situation in Germany). For example, the applicatory use was very complicated and transactions with derivatives were not transparent enough. There were only clear standards for a few product groups and transactions with derivatives were not reported on the balance sheet.² In consequence, first in 1986, a work program called Project on Financial Instruments was founded.³ In 1992 the members of the FASB received the responsibility in working on derivatives and continued improving the existing statement for about six years in more than 100 meetings. In June 1998 (06/16/1998) the Statement for Financial Accounting Standard (SFAS) No. 133 "Accounting for Derivative Instruments and Hedging Instruments" passed as an outcome of these efforts and is valid for every entity.⁴ Some public voices say, it is one of the most complex and controversial standards ever issued by the FASB.⁵ Statement No. 133 replaced FASB Statement No. 80 (Accounting for Future Contracts), No. 105 (Disclosure of Information about Financial Instruments with Off-Balance-Sheet Risk and Financial Instruments with Concentrations of Credit Risk) and No. 119 (Disclosures about Derivative Financial Instruments and Fair Value of Financial Instruments).⁶ Also FASB Statement No. 52 (Foreign Currency Translation) and No. 107 (Disclosures about Fair Value of Financial Instruments) were amended, by including the "disclosure provisions about concentration of credit risk" form Statement No. 105 in Statement No.107. Despite the fact that the new Statement was issued in June 1998 it only was effective on financial statements for fiscal years beginning after June 15, 2000. [...] ¹ Cp. Financial risk management is currently subject to much debate, especially the accounting for derivative products, and a number of commentators are objecting to the introduction of International Accounting Standard IAS 39 for Derivatives that will be in force by January 2005 for all EU companies. The topic of hedge accounting and the treatment of fair values may have a significant impact on many companies reported profits, and the volatility of earnings is likely to increase. Uniquely this monograph focuses on interest rate risk management. Most studies of corporate risk management have typically dwelt on the topic of management of exchange rate risk, with interest rate risk management being neglected. The book's findings examine the views of UK corporate treasurers who are usually involved in the risk management strategies of their organisation and who have responsibility for implementing those strategies in practice. * The research is the first comprehensive UK study on this area * Relevant to the imminent arrival of IAS 39, the International Accounting Standard for Derivatives that will be in force by January 2005 for all EU companies. * The findings of the book have implications for government policy and regulators

As there is no current book that deals extensively or exclusively with survey research in corporate finance Survey Research in Corporate Finance is the only one of its kind. For even while there are numerous books on survey methodology, none focus on this methodology as specifically applied to corporate finance. In the book, Baker, Singleton, and Velt do nothing less than provide an overview of survey methodology useful to financial researchers, synthesize the major streams or clusters of survey research in corporate finance, and offer a valuable resource and guide for those interested in conducting survey research in finance. Thus this volume will be an essential reference for practitioners, academics, and graduate students—who all must know the methodology of finance survey research. In addition to methodology, the book identifies areas that will be best served by survey-based research. Researchers will have a wealth of information regarding past surveys and will be aware of suitable candidates for future surveys. Several chapters are devoted to synthesizing survey results on major issues in finance. These will help decision makers in finance and in non-finance firms to acquire knowledge learned from years of communications between academics and practitioners.
