Assessment in Health Professions Education provides comprehensive guidance for persons engaged in the teaching and testing of the health professions – medicine, dentistry, nursing, pharmacy and allied fields. Part I of the book provides a user-friendly introduction to assessment fundamentals and their theoretical underpinnings; Part II describes specific assessment methods used in the health professions, with a focus on best practices, assessment challenges, and practical guidelines for the effective implementation of successful assessment programs. Key features: Comprehensive – the first text to provide broad, single-source coverage of all aspects of assessment in the health professions. Accessible – while scholarly and evidence-based, the book is geared towards health professions educators who are not measurement specialists. Thematic – assessment validity is an organizing theme and provides a conceptual framework throughout the book.

Math for Healthcare Professionals: Dosage Calculations and Fundamentals of Medication Administration builds upon a student's existing basic math skills and teaches them the more complex solving calculations that are representative of today's healthcare practice. The foundation for learning to calculate dosages and intravenous administration will be based on the ratio and proportion model, which also adapts to the dimensional Analysis method--an increasingly popular method as dosage calculations are universalized. Math for Healthcare Professionals contains diagnostic test questions at the beginning of each chapter, sample questions throughout each chapter, and

Applied Neurosciences for the Allied Health Professions provides a solid and comprehensive foundation in neurosciences for undergraduates and pre-registration postgraduate students. Using a multidisciplinary approach, it helps understand the commonly found problems in neurological rehabilitation and inform clinical practice. The book starts with the foundation of basic neurosciences, covering the normal function and structure of the nervous system from the organism as a whole through to the molecular. It then goes on to discuss the most commonly found disorders and how to manage them, covering both behavioural and pharmacotherapeutic interventions. The book closes by summarising current principles underpinning best practice and also looks to the future by identifying gaps in evidence-based practice with ideas for future research and what the future may hold for rehabilitation. Throughout the book, a variety of supplementary information boxes point towards additional information such as Case Studies which highlight the clinical relevance of topics discussed; and a variety of Research Boxes which refer to more advanced material and/or original research studies. Each chapter ends with self-assessment questions which will check progress and prompt students to reflect on how the information presented in the chapter could be applied to clinical practice. Lays the foundation of basic neurosciences for allied health
