This introductory college-level molecular biology textbook builds upon concepts from first-year high school biology and chemistry courses to elucidate essential concepts in molecular biology, biochemistry, cell biology, and genetics. It is appropriate for college courses and high school courses taught at the college level. Over 170 color figures clearly illustrate key concepts. The goal of this work is to clarify concepts in a streamlined manner, not to be an encyclopedic collection of facts. Connections are explicitly made to prior knowledge and key high school chemistry concepts are reviewed. The biotechnology driving basic science research and translational medicine is explained so that this textbook can serve as a companion to a student beginning molecular biology research. Highlighted techniques include PCR, Sanger DNA sequencing, next-generation DNA sequencing, genetic engineering of plasmids, iGEM gene assembly, principles of gene expression, gene transfer into bacteria and mammalian cells, strategies in drug design, human gene therapy, CRISPR and other genome editing techniques. This Seventh Edition connects experimental material to key concepts of Cell Biology. The text offers streamlined information that reinforces a connection of key concepts to experimentation. Though the use paired art, and new science illustrations, readers benefit from a visual representation of experimental connections. Animations and video clips are tied to key illustrations with practice questions to provide a variety of ways to experience a key concept. This new edition offers an appropriate balance of concepts and experimentation. Experimental detail is offered when it helps to reinforce the concept being explained.

This edition explores the core concepts of cell biology in considerable depth and presents experimental detail when it helps to explain and reinforce the concepts. The majority of discussions have been modified to reflect the latest changes in the field and it opens each chapter with and illustration that serves as a visual summary.
