According to the IAPP, candidates seeking their IAPP privacy certification must pass the MC based Certification Foundation exam which covers elementary concepts of privacy and data protection from a global perspective. The major exam components are: I. Introduction to Privacy: Common Principles and Approaches II. Information Security: Protecting and Safeguarding Personal Information III. Online Privacy: Using Personal Information on Websites and with Other Internet-related Technologies After this exam the next step is to take the CIPP/US exam or the CIPP/C exam, both of which have a lot of legal topics. Simply put, to earn the CIPP designation you need to pass both exams. It is our opinion that you need to possess both technical knowledge and legal knowledge in order to succeed. When we develop our material we do not classify topics the official way. In fact, we follow our own flow of instructions which we think is more logical for the overall learning process. Don't worry, it does not hurt to do so, as long as you truly comprehend the material. To succeed in the exam, you need to read as many reference books as possible. There is no single book that can cover everything! This ExamFOCUS book focuses on the more difficult topics that will likely make a difference in exam results. The book is NOT intended to guide you through every single official topic. The book is also NOT an introductory guide to privacy text. You should therefore use this book together with other reference books for the best possible preparation outcome.

Matters of privacy have profoundly changed since electronic storage of information has become the norm. Consequently, policy-makers and legislators are trying to keep up

with privacy challenges in the workplace, in healthcare, in surveillance, and on social networking sites. With *Privacy: Defending an Illusion*, Martin Dowding fills a very important gap in policy analysis and the teaching of privacy issues at the senior undergraduate and early graduate student level. In the first section of this book, Dowding recounts historical interpretations of privacy in a wide variety of socio-cultural circumstances. In the second section, the author addresses how information and communication technologies have changed our conceptions about privacy and redirected our focus from keeping information private to sharing it with many more people than we would have even a few years ago. Dowding also examines a variety of possible options for the future of privacy. The appendixes include seminal readings on relevant topics that should encourage debates about the nature of privacy and its problems. Overall, this book provides a solid background for defining and understanding privacy in a wide variety of contexts.

"It's our thesis that privacy will be an integral part of the next wave in the technology revolution and that innovators who are emphasizing privacy as an integral part of the product life cycle are on the right track." --The authors of The Privacy Engineer's Manifesto The Privacy Engineer's Manifesto: Getting from Policy to Code to QA to Value is the first book of its kind, offering industry-proven solutions that go beyond mere theory and adding lucid perspectives on the challenges and opportunities raised with the emerging "personal" information economy. The authors, a uniquely skilled team of longtime industry experts, detail how you can build privacy into products, processes, applications, and systems. The book offers insight on translating the guiding light of OECD Privacy Guidelines, the Fair Information Practice Principles (FIPPs), Generally Accepted Privacy Principles (GAPP) and Privacy by Design (PbD) into concrete concepts that organizations, software/hardware engineers, and system administrators/owners can understand and apply throughout the product or process life cycle—regardless of development methodology—from inception to retirement, including data deletion and destruction. In addition to providing practical methods to applying privacy engineering methodologies, the authors detail how to prepare and organize an enterprise or organization to support and manage products, process, systems, and applications that require personal information. The authors also address how to think about and assign value to the personal information assets being protected. Finally, the team of experts offers thoughts about the information revolution that has only just begun, and how we can live in a world of sensors and trillions of data points without losing our ethics or value(s)...and even have a little fun. The Privacy Engineer's Manifesto is designed to serve multiple stakeholders: Anyone who is involved in designing, developing, deploying and reviewing products, processes, applications, and systems that process personal information, including software/hardware engineers, technical program and product managers, support and sales engineers, system integrators, IT professionals, lawyers, and information privacy and security professionals. This book is a must-read for all practitioners in the personal information economy. Privacy will be an integral part of the next wave in the technology revolution; innovators who emphasize privacy as an integral part of the product life cycle are on the right track. Foreword by Dr. Eric Bonabeau, PhD, Chairman, Icosystem, Inc. & Dean of Computational Sciences, Minerva Schools at KGI.
