Money in Asia examines two chronic problems that faced early modern monetary economies in East, South, and Southeast Asia: The inability to provide sufficient amounts of small currencies to facilitate local economic transactions and to control currency depreciation.

Competition between firms is usually the most effective way of delivering economic efficiency and what consumers want. However, there is a balance to be struck. Firms must not be over-regulated and so hampered in their development of innovative products and new strategies to compete for customers. Nor must they be completely free to satisfy a natural preference for monopoly, which would give them higher profits and a quieter life. The economic role of competition policy (control of anticompetitive agreements, mergers and abusive practices) is to maintain this balance, and an effective policy requires a nuanced understanding of the economics of industrial organization. Cases in European Competition Policy demonstrates how economics is used (and sometimes abused) in competition cases in practical competition policy across Europe. Each chapter summarizes a real case investigated by the European Commission or a national authority, and provides a critique of key aspects of the economic analysis.

Two experts in monetary policy offer a unified framework for studying the role of money and liquid assets in the economy. In *Money, Payments, and Liquidity*, Ed Nosal and Guillaume Rocheteau provide a comprehensive investigation into the economics of money and payments by explicitly modeling trading frictions between agents. Adopting the search-theoretic approach pioneered by Nobuhiro Kiyotaki and Randall Wright, Nosal and Rocheteau provide a logically coherent dynamic framework to examine the frictions in the economy that make money and liquid assets play a useful role in trade. They discuss the implications of such frictions for the suitable properties of a medium of exchange, monetary policy, the cost of inflation, the inflation-output trade-off, the coexistence of money, credit, and higher return assets, settlement, and liquidity. After presenting the basic environment used throughout the book, Nosal and Rocheteau examine pure credit and pure monetary economies, and

a careful analysis of potential risks and benefits which vary greatly from country to country and even from day to day. In *Cracking the Emerging Markets Enigma*, emerging markets expert Andrew Karolyi outlines a practical strategy for evaluating the opportunities and-more importantly-the risks of investing in emerging markets. Karolyi's proposed system evaluates multiple dimensions of the potential risks faced by prospective investors. These categories of risk reflect the uneven quality or fragility of the various institutions designed to assure integrity in capital markets-political stability, corporate opacity, limits placed on foreign investors, and more. By distilling these analyses into a numerical scoring system, Karolyi has devised a way to assess with ease emerging markets by different dimensions of risk and across all dimensions together. This novel assessment framework already has been tested in the market to great success. Researchers, students, firms, and both seasoned and novice investors are poised to gain a clear understanding of how to evaluate potential investments in emerging markets to maximize profits.

the body, and costumes that complement movement. This unique book approaches the process of staging a dance production from a balanced perspective, making it an essential resource for dancers and designers alike. Covering a broad range of topics, author Jeromy Hopgood takes the reader through the process of producing dance from start to finish – including pre-production planning (collaboration, production process, personnel, performance spaces), design disciplines (lighting, sound, scenery, costumes, projections), stage management, and more. Bridging the gap between theatrical and dance design, the book includes a quick reference guide for theatrical and dance terminology, useful in giving dancers and designers a common working vocabulary that will ensure productive communication across the different fields.
