The Tibetan language comprises a wide range of spoken and written varieties whose known history dates from the 7th century AD to the present day. Its speakers inhabit a vast area in Central Asia and the Himalayas extending into seven modern nation states, while its abundant literature includes much of vital importance to the study of Buddhism. After surveying all the known varieties of Tibetan, including their geographical and historical background, this book concentrates on a phonological and grammatical description of the modern spoken Lhasa dialect, the standard spoken variety. The grammatical framework which has been specially devised to describe this variety is then applied to the written varieties of Preclassical and Classical Tibetan, demonstrating the fundamental unity of the language. The writing system is outlined, though all examples and texts are given in roman script and where appropriate, the International Phonetic Alphabet. The volume includes a comprehensive bibliography.

This resource contains 14 articles on connected speech of interest to teachers, researchers, and materials developers in both ESL/EFL and Japanese.

This book argues that ideophones provide the 'missing link' in our knowledge of how communication has evolved to become the spoken language of today.

Translation of cognitive representations into written language is one of the most important processes in writing. This volume provides a long-awaited updated overview of the field. The contributors discuss each of the commonly used research methods for studying translation; theorize about the nature of the cognitive and language representations and cognitive/linguistic transformation mechanisms involved in translation during writing; and make the case that translation is a higher-order executive function that is fundamental to the writing process. The book also reviews the application of research to practice -- that is, the translation of the research findings in education and the work-world for individuals who interact with others using written language to communicate ideas. This volume provides a rich resource for student, theorists, and empirical researchers in cognitive psychology, linguistics, and education; and teachers and clinicians who can use the research in their work.

In this MPIL volume, Janet Dyk and Percy van Keulen implement computer science, linguistic analysis, and text-historical insights in treating the differences between the Hebrew and Syriac versions of Kings. Applying the distinct disciplines helped in arriving at a more balanced assessment of the nature and provenance of the deviations observed.

Any study of communication must take into account the nature and role of speech acts in a broad context. This book addresses questions such as: - What do we mean? - How do we say it? and - How is it understood? in the broad context of universal, socio-cultural and psychological issues that bear on human communication. It presents an overview of current issues in speech act theory that are at the center of human and social sciences dealing with language, thought and action, building on John Searle's famous article 'How Performatives Work' (included in this book). The contributions by linguists, psychologists, computer scientists, and philosophers thus address issues of communication that are crucial in conversation analysis, cognitive science, artificial intelligence, psychology and philosophy, and a general understanding of how we communicate. The book is suitable for courses with an extensive bibliography for further reading and an Index.

Foreword Looking back the past 30 years, we have seen steady progress made in the area of speech science and technology. I still remember the excitement in the late seventies when Texas Instruments came up with a toy named "Speak-and-Spell" which was based on a VLSI chip containing the state-of-the-art linear prediction synthesizer. This caused a speech technology fever among the electronics industry. Particularly, applications of automatic speech recognition were rigorously attempted by many companies, some of which were start-ups founded just for this purpose. Unfortunately, it did not take long before they realized that automatic speech recognition technology was not mature enough to satisfy the need of customers. The fever gradually faded away. In the meantime, constant efforts have been made by many researchers and engineers to improve the automatic speech recognition technology. Hardware capabilities have advanced impressively since that time. In the past few years, we have been witnessing and experiencing the advent of the "Information Revolution." What might be called the second surge of interest to commercialize speech technology as a natural interface for man-machine communication began in much better shape than the first one. With computers much more powerful and faster, many applications look realistic this time. However, there are still tremendous practical issues to be overcome in order for speech to be truly the most natural interface between humans and machines.

In Speech-in-Character, Diatribe, and Romans 3:1-9, Justin King focuses on the rhetorical skill of speech-in-character to identify which voice speaks which lines in Paul's diatribal dialogue in Romans 3:1-9. He then considers this passage's function in its larger epistolary context.

THE RHETORICAL ACT: THINKING, SPEAKING, AND WRITING CRITICALLY, Fifth Edition, teaches liberal arts students how to craft and critique rhetorical messages that influence, inviting and enabling them to become articulate rhetors and critics of the world around them. The new edition maintains a traditional humanistic approach to rhetoric, while extending the scope and relevance of the text. THE RHETORICAL ACT reaffirms the ancient Aristotelian and Ciceronian relationships between art and practice-one cannot master rhetorical skills without an understanding of the theory on which such skills are based. The text combines thorough coverage of rhetorical criticism, media literacy, and strategic public speaking, providing a solid grounding in essential concepts while helping students hone their skills in each area.
