Snow warned of a gap that had opened up between scientists and the 'literary intellectuals' that made it almost impossible for the two groups to communicate. Snow complained that literary intellectuals were not only ignorant of science but contemptuous of it, as if scientific knowledge were unnecessary for a good education. Snow believed that improvements in the teaching of science were required in order to address the world's greatest problems, and that both the USA and the USSR were ahead of Britain in that respect. Snow spoke with the authority of a man with a foot in both camps, as a trained research scientist and a successful novelist, and his lecture provoked worldwide coverage.
