corresponding refereed papers are organized under the following themes: New trends and innovations, human resource management, information technology and standardization. The underlying motivation behind this collection of works is to bridge the gap between cruise theory and practice, by providing a 'living research agenda' aligned with the cruise sector's realities and needs.

This textbook presents a compendium of important issues that were discussed at the 2nd International Cruise Conference in Plymouth (UK) between the 18th and 20th February 2010. The focus of the conference was to consider emerging issues, problems and solutions for the cruise industry at a time when trading conditions were perceived to be highly volatile.

This book explores the lessons learned from half a century of Caribbean cruise tourism; one of the most popular and profitable sectors of the tourism industry. The modern-day cruise industry dates from the 1960s when the three major cruise lines, Carnival, Royal Caribbean, and Norwegian, set up shop in Florida and began selling winter cruises to the Caribbean targeting American retirees. For geopolitical reasons, the US initially excluded cruises to Cuba. This changed in 2016, following the historic Obama-Castro agreement to move towards diplomatic, trade and travel normalization. Cuba quickly became the Caribbean's fastest growing cruise destination. This book considers the limited economic benefits of cruise tourism, its environmental and social impacts, and the effects of climate change, and "overtourism." Based on this analysis and case studies of key Caribbean and Mediterranean destinations, this book cautions against overdependence on cruise tourism and outlines reforms needed to bring more benefits and equity to Caribbean countries. It will be valuable to professionals, businesses, development agencies, NGOs, and academics

interested in a sustainable cruise industry and the economic well-being of Caribbean island nations.

This open access book is based on work from the COST Action RESTORE - REthinking Sustainability TOwards a Regenerative Economy, and highlights how sustainability in buildings, facilities and urban governance is crucial for a future that is socially just, ecologically restorative, and economically viable, for Europe and the whole planet. In light of the search for fair solutions to the climate crisis, the authors outline the urgency for the built environment sector to implement adaptation and mitigation strategies, as well as a just transition. As shown in the chapters, this can be done by applying a broader framework that enriches places, people, ecology, culture, and climate, at the core of the design task - with a particular emphasis on the benefits towards health and resilient business practices. This book is one step on the way to a paradigm shift towards restorative sustainability for new and existing buildings. The authors want to promote forward thinking and multidisciplinary knowledge, leading to solutions that celebrate the richness of design creativity. In this vision, cities of the future will enhance users' experience, health and wellbeing inside and outside of buildings, while reconciling anthropic ecosystems and nature. A valuable resource for scientists and students in environmental sciences and architecture, as well as policy makers, practitioners and investors in urban and regional development.

The 2020 edition analyses tourism performance and policy trends across 51 OECD countries and partner economies. It highlights the need for coherent and comprehensive approaches to tourism policy making, and the significance of the tourism economy, with data covering domestic, inbound and outbound tourism, enterprises and employment, and internal tourism consumption.

Tourism is that area of activity of contemporary man that

touches on various fields of human interest. Representatives of numerous academic disciplines find it intriguing for its exceptionally interdisciplinary character. Conditions for and consequences of the development of tourism are investigated, among others, by economists, geographers, sociologists, experts in culture, anthropologists, management and social policy specialists and even by representatives of some natural sciences. Researchers dealing with tourism need to meet strict methodological requirements, but they get access to a very interesting subject of scientific inquiry, which combines social, cultural, economic and environmental aspects to create an ontologically new quality offering epistemological challenges.

Tourism, as with many parts of the economy, is at a pause-reflect-rest stage in the post pandemic world. This book puts forward some positive and practical concepts for the reset stage in terms of pushing towards wholly sustainable tourism. The COVID-19 pandemic has been disastrous in terms of the loss of human life, the physical and mental strains placed on large numbers of populations across the globe who have been quarantined in their homes and in terms of the costs of dealing with the pandemic and supporting business and citizens through the period. Tourism has been comprehensively damaged, not only in advanced economies, but also in poorer developing economies where tourism provides a vital source of income and employment. The problem has been complicated by the shattering effect on mass tourism, which has been far more sensitive to the shutdown of travel and accommodation than ethical and responsible tourism activities focused at a local sustainable level. Therefore this book evaluates how the pandemic and economic decline affects ethical and responsible tourism - the type of tourism which sustains and develops local communities in a balanced way for the benefit of future

generations. It reflects on the position the authors established in "Ethical & Responsible Tourism - managing sustainability in local tourism destinations" and then determines how ethically and responsibly focused tourism may adapt, develop and maintain safety for consumers in the post-virus world. This book will be essential reading for students, researchers and practitioners of tourism, environmental and sustainability studies.

Seminar paper from the year 2020 in the subject Tourism - Miscellaneous, grade: 1,3, University of Applied Sciences Südwestfalen; Meschede, language: English, abstract: This research project deals with the question to what extent the Croatian port city of Dubrovnik is affected by overtourism and how this can be interpreted and mitigated. Overtourism is a multifaceted phenomenon that is very much on the agenda of the tourism industry today. At the International Tourism Fair in Berlin in 2018, as well as in numerous newspaper articles, but also in general language use, the subject of overtourism is omnipresent. Due to the worldwide increase in travel behavior and the growing popularity of city tourism, urban areas are becoming increasingly congested. These include overcrowded streets and alleys, public places, accommodation facilities and numerous other facilities. This often has negative social, economic and ecological effects. More and more often, headlines of disgruntled inhabitants, socio-cultural conflicts, infrastructural problems, as well as other grievances can be found in the media. In many cases, these are due to even more rapidly increasing numbers of tourists.

This book offers essential insights into how the world's second largest industry, tourism, is responding to challenges involved in expanding the corporate social responsibility (CSR) concept to corporate sustainability and responsibility, referred to as CSR 2.0. It analyzes the typical setup of

tourism with various types of commercial agents: corporations, small and medium sized enterprises, public-private partnerships, social enterprises and local cooperatives. In addition, the book examines a broad range of voluntary initiatives, the effectiveness of these efforts, and how contextual and wider policy features shape these relationships. The book is divided into three parts, the first of which elaborates on strategic drivers and rationales for CSR. In turn, the second part introduces readers to design approaches for CSR programs and envisaged impacts, while part three focuses on implementation, certification, reporting, and possible outcomes. Each part offers a mixture of theoretical perspectives, synthesis analyses and case studies. The respective chapters tackle a broad spectrum of tourism sub-sectors, e.g. the cruise industry, aviation, gastronomy, nature-based tourism, and urban destinations. COVID-19 put a temporary stop to the crisis of overtourism. Yet there is no question that travel will resume; the only question is, when it does, what will it look like? *Overtourism: Lessons for a Better Future* charts a path toward tourism that is not only sustainable but regenerative for the places we love and the people who live there. This practical book examines the causes and effects of overtourism before turning to emerging management strategies. Visitor education, traffic planning, and redirection to lesser known sites are among the measures that can protect the economic benefit of tourism without overwhelming local communities. As tourism revives around the world, these innovations will guide government agencies, parks officials, site managers, civic groups, environmental NGOs, tourism operators, and others with a stake in protecting our most iconic places. Written by award-winning CQ Researcher journalists, this collection of non-partisan reports offers an in-depth examination of today's most pressing global issues. With

This book addresses innovation management and product development in the cruise tourism industry. It explains how experience management has evolved from a strictly company-level, product- or service-focused tactical task to an industry-wide strategic challenge, and analyses the role of intangible reputational aspects of cruise experiences, as well as peripheral components and stakeholders, as increasingly important factors for customer acquisition and retention. Safety and risk issues are a central theme, as well as the cruise sector's environmental and socio-economic impacts. Lastly, the book considers the increasing size of cruise vessels and the accompanying standardisation of facilities and itineraries, in conjunction with the hybridisation of cruise passengers in connection with expanding the competitive boundaries and intensity of competition in the cruise sector. The book approaches these issues as more than a mere public relations campaign, recognising the fact that they have since become the very essence of strategic cruise business development.

The growth and increased popularity of cruises is accompanied by a number of sustainability issues concerning the environment, the port economies and societies; on board and at shore. The sustainability imperative ultimately leads to operational, economical as well as image-related challenges for

The three core themes of the book – destination management, environmental and social aspects of ethical sustainable development and business impacts – are discussed across both topic and case study chapters, alongside explanatory editorial analysis with all chapters clearly signposted and interlinked. The case studies address specific and practical examples from a global range of examples including sites in Australia, Central America, Europe Union countries, Japan, North America and South America. Used as a core textbook, the linking of theory in the topic chapters, and practice gained through case studies, alongside further reading and editorial commentary, Ethical and Responsible Tourism provides a detailed and comprehensive learning experience. Specific case studies can be used as standalone examples as part of a case teaching approach, and the editorial and discussion elements are designed to be suitable for those simply seeking a concise overview, such as tourism professionals or potential investors in sustainable tourism projects. This book will be essential reading for students, researchers and practitioners of tourism, environmental and sustainability studies.

point of view, turns out to cover different kinds of human activity. It is not surprising, then, that when approached from an academic perspective, it reveals enormous potential for interdisciplinary research, which has proven extremely attractive to many scholars from different continents, disciplines, and schools of academic inquiry. The scholars in this volume focus on the specific aspects of mobilities, namely, tourism and travel behavior, but approach them from a plethora of positions. Such a myriad of perspectives is bound to be challenging in methodological terms, but it seems there is a growing agreement as to the worthiness of this interdisciplinary research. By means of combining various approaches, researchers obtain access to a fascinating and increasingly ubiquitous phenomenon of contemporary human mobility.
