The new edition of this brief introductory text retains the hallmark features that have made its parent text unique, while offering a more manageable, student-friendly format. The book was written with three goals in mind: to make the study of psychology accessible and engaging to the beginning student in psychology, to provide students with a solid grounding in the knowledge base in psychology, and to help students succeed in the course. Nevid's comprehensive learning system-derived from research on memory, learning, and textbook pedagogy-is featured throughout. This learning model incorporates what the author calls the Four E's of Effective Learning-Engaging Student Interest, Encoding Information, Elaborating Meaning, and Evaluating Progress. **ESSENTIALS OF PSYCHOLOGY: CONCEPTS AND APPLICATIONS**, 4th Edition, provides a broad view of psychology as well as applications of the knowledge gained from contemporary research to the problems and challenges we face in today's world. Fuzzy Modeling and Genetic Algorithms for Data Mining and Exploration is a handbook for analysts, engineers, and managers involved in developing data mining models in business and government. As you'll discover, fuzzy systems are extraordinarily valuable tools for representing and manipulating all kinds of data, and genetic algorithms and evolutionary programming techniques drawn from biology provide the most effective means for designing and tuning these systems. You don't need a background in fuzzy modeling or genetic algorithms to benefit, for this book provides it, along with detailed instruction in methods that you can immediately put to work in your own projects. The author provides many diverse examples and also an extended example in which evolutionary strategies are used to create a complex scheduling system. Written to provide analysts, engineers, and managers with the background and specific instruction needed to develop and implement more effective data mining systems Helps you to understand the trade-offs implicit in various models

The Aim of "Current Concepts of General Thoracic Surgery" is to provide a brief overview of several topics in this field. It includes a collection of contributions from many outstanding Authors who provide their knowledge and experience from many countries around the world. We apologize for the chapters reviewed that have were not chosen for publication in this book; however, according to the single centres experience, the final result offers thorough and precious information on the several topics evaluated by the Authors. The wide range of subjects discussed goes from CT assessment of solitary pulmonary and metastatic nodules to prospective studies of drug delivery in thoracic surgery including surgical risk prediction, stress reaction, robotic pulmonary and cardiac procedures, vascular and thoracic reconstruction techniques, thoracic trauma and mediastinal fistula. I believe that this book represents an enhancement in the knowledge and in the involvement of individuals dedicated to these areas of study. It is my duty and pleasure to thank colleagues who helped me in the interesting and stimulating review process; Dr. Stefano Pasquino for cardiac surgery and Professor Francesco Puma for his many worthwhile suggestions.
