When you need to find anyone or anything in the library community, just turn to American Library Directory 2004-2005. You'll find detailed profiles for more than 35,000 public, academic, special, and government libraries and library-related organizations in the U.S. and Canada-including addresses, phone and fax numbers, e-mail addresses, network participation, expenditures, holdings and special collections, key personnel, special services, and more-more than 40 categories of library information in all. This indispensable resource makes it easy to: Contact colleagues, other libraries, or library organizations. Locate special collections, rare book and document holdings, and manuscript collections. Find consortium libraries or networks for interlibrary loans, information, or membership. Compare other libraries' facilities, services, and expenditures with yours. Identify libraries equipped for the disabled and other specialized facilities. Find out about seminars and in-service educational programs. Libraries are listed alphabetically by state and city, and registries of library schools and library consortia are included as well.

Provides detailed country surveys containing the analytical, statistical and directory data available for over 250 countries and territories. This work contains a comprehensive listing of some 1,900 International Organizations such as the United Nations, European Union, the International Organization for Migration and the World Trade Organization.

Every entry follows a standard pattern: after the address and telephone number of the institution there is a brief description of its history and financial support, followed by the names of the senior staff, total number of staff, the institution's structure and services, its main research programmes and a list of its publications. For this new edition a subject index has been added, allowing the reader to identify centres of research activity on individual construction topics throughout the world. The world-wide investment in construction industry research is enormous. This unique directory is a guidebook to that investment which will enable its readers to isolate sources of advice on practical problems, information on national standards and requirements and potential research collaborators.

This directory is a valuable and powerful tool for anyone who is interested in locating high value business information.

El experto realiza en la obra un completo estudio sobre unas estructuras asombrosas y espectaculares, que constan de barras que flotan en el aire, estando únicamente sujetas mediante cables a otras barras que también flotan. Estos sistemas de compresión flotante tienen múltiples aplicaciones en arquitectura, arte, ingeniería... y están presentes en obras como la escultura "Torre de Agujas" de Kenneth Snelson (formada por estas barras flotantes) o la mayor cúpula del mundo, la cúpula del Georgia Dome, estadio de los Falcons de Atlanta, teniendo sus precedentes en el Estadio Olímpico de Munich

The World Guide to Special Libraries lists about 35,000 libraries world wide categorized by more than 800 key words - including libraries of departments, institutes, hospitals, schools, companies, administrative bodies, foundations, associations and religious communities. It provides complete details of the libraries and their holdings, and alphabetical indexes of subjects and institutions.

A two-volume annotated guide to 26,670 listings of live and print sources of information designed to facilitate the start-up, development, and growth of specific small businesses, as well as 26,158 similar listings for general small business topics. An additional 11,167 entries are provided on a state-by-state basis; also included are 965 relevant U.S. federal government agencies and branch offices.

Tensegrity structures are really intriguing: bars floating in the air, without any contact to a solid support, attached only by wires to other bars... that are also floating in the air! The aim of this work is to serve as an introduction to such an atypical kind of structure. It tries to explain everything about the controversial origins and polemic fatherhood; tensegrities from various fields, other than Architecture, structural principles, characteristics, advantages and weakness; precedent and current works and patents; and finally, some new proposals, proving that it is possible to find some applications to architectural and engineering purposes. In conclusion, this work tries to be a guide and reference to a new world of structural possibilities that is blooming and finding its path.

This English translation of the successful French edition presents the conception and design of steel and steel-concrete composite bridges, from simple beam bridges to cable supported structures. The book focuses primarily on road bridges, emphasizing the basis of their conception and the fundamentals that must be considered to assure structural safety and serviceability, as well as highlighting the necessary design checks. The principles are extended in later chapters to railway bridges as well as bridges for pedestrians and cyclists. Particular attention is paid to consideration of the dynamic performance.

A bestseller since 1847, this well-respected resource is a directory, a client prospect list, a statistical handbook and an invaluable quick reference aid all rolled into one. It's the only book you need when your patrons require facts and figures about Canada or names and addresses of Canadian organizations, institutions, government departments, law firms, school boards, media and much more. Some of the enhancements you'll see in this new edition updates on this year's municipal amalgamations in Ontario and Quebec; expanded communications and information management data; approximately 4,000 web sites; reorganized and entirely updated health directory; all the details on every amalgamated education board in Ontario and Quebec; and more.

La publication de cet ouvrage est dictée par le souci de mettre à la disposition des étudiants en architecture, des architectes, des concepteurs et des constructeurs un document indépendant, consacré uniquement à la conception structurale des charpentes métalliques. Dans ce but, il reprend intégralement les chapitres 1 à 6 du volume 11 du Traité de Génie Civil, paru chez le même éditeur, où les différents critères de conception sont énoncés et les systèmes porteurs de halles et de bâtiments sont décrits sans avoir recours à des calculs. Les aspects du montage, de la sécurité incendie et de la protection contre la corrosion sont également pris en compte. Cet ouvrage devrait donc faciliter la conception d'une charpente métallique de bâtiment sans qu'il soit nécessaire d'aborder le calcul proprement dit. La conception des charpentes métalliques ne pouvant être enseignée sans une présentation graphique claire et une mise en page

attractive, un soin particulier est apporté aux dessins et l'approche pédagogique est privilégiée. Dans cette nouvelle édition, le chapitre consacré aux principes de dimensionnement a été complètement remanié sur la base des nouvelles normes suisses et européennes de structures porteuses.

Cet ouvrage constitue le deuxième volume des trois consacrés au domaine de la construction métallique. Il traite de la conception et du dimensionnement des halles et des bâtiments en charpente métallique, en utilisant les notions de base développées dans le volume X. L'ouvrage est divisé en deux parties, l'une relative à la conception des charpentes métalliques, l'autre à leur dimensionnement. La partie CONCEPTION décrit les différents critères de conception, les systèmes porteurs et le cheminement des charges et actions jusqu'aux fondations, sans avoir recours à des calculs. Les aspects du montage, de la sécurité incendie et de la protection contre la corrosion sont également abordés dans cette partie. La partie DIMENSIONNEMENT traite des éléments de structure, de leurs assemblages et des structures entières. L'importance est donnée au choix des dimensions et à leur vérification par des méthodes de calcul basées sur les principes actuels de sécurité et d'aptitude au service. Chaque chapitre de cette deuxième partie comprend des exemples numériques destinés à illustrer les concepts et méthodes exposés. Cet ouvrage s'adresse aux étudiants du deuxième cycle universitaire ainsi qu'aux concepteurs, aux architectes et aux ingénieurs de structures.
