Hemi Muscle 70 Years is the complete illustrated story of the legendary engine and the cars it powered. Author Darwin Holmstrom explores how Chrysler's Hemi engine became the number one choice for drag racers and stock car racers across the country, campaigned to great success by drivers like Richard Petty, Don Garlits, David Pearson, Sox and Martin, and more. In 1950, Chrysler debuted a potent high-performance overhead-valve V-8 engine. Originally called the FirePower, it would soon be better known by the name "Hemi." Intended to power Chrysler's luxury cars, the Hemi found a higher calling: humiliating its competitors on the street and at the race track. On top of learning how the Hemi engine came to be, you'll also see how the Hemi remained the engine to beat on the street, stuffed into some of the most desirable performance cars in automotive history: the 'Cuda, Road Runner, Charger, GTX, and Challenger, to name a few. The Hemi made such a lasting impact that Chrysler revived it as the top engine for the twenty-first century Challenger and Charger. Today, Hemi is a household name, known to enthusiasts and consumers alike, often imitated, never duplicated. Having found its way into both sports cars and luxury cars, you'll often hear: "Hey, has that thing got a Hemi in it?" This book answers "yes"...and offers the full exciting story!

From the resumption of automobile production at the close of World War II through the 1950s, the American auto industry would see the births and deaths of several manufacturers, great technological advances, and an era of dramatic styling as a prospering nation asserted its growing mobility. Cars of this period are among the most iconic vehicles ever built in the United States: the 1949 Ford, the remarkable Studebaker designs of 1950 and 1953, the 1955–1957 Chevrolets, the "Forward Look" Chrysler products, the ill-fated Edsel and many others. This comprehensive reference book details every model from each of the major manufacturers (including independents such as

Kaiser-Frazer and Crosley but excluding very low-volume marques such as Tucker) from model years 1946 through 1959. Year by year, it provides an overview of the industry and market, followed by an individual report on each company: its main news for the year (introductions or cancellations of models, new engines and transmissions, advertising themes, sales trends etc.); its production figures and market status; and its powertrain offerings, paint colors and major options. The company's models are then detailed individually with such information as body styles, prices, dimensions and weights, standard equipment and production figures. Nearly 1,000 photographs are included.

This book chronicles over 75 years of engine design, development, and production at Chrysler Corporation. Every production engine built by Chrysler is covered, with descriptions, pictures, specifications, and timelines provided for each. Each engine is defined in terms of its basic structure (including its cylinder bore spacing, number of main bearings, and valve operation). In addition to the specifications, the book also looks at the personalities behind the engines' development and the vehicles in which the engines were used.

In this hilarious collection of old car stories, Canada's very own "Old Car Detective" Bill Sherk presents 80 of his favourite stories spanning the years from 1925 to 1965. Excerpt:

American Motors Corporation (AMC) produced a series of widely-used V8 engines from the mid-1950s before being absorbed into Chrysler in 1987. Chrysler kept the AMC V8 in production until 1991 for the Jeep Grand Wagoneer. This engine family is now referred to as the "GEN-1" AMC V8, but in its time it was known as the Rambler V8. As part of a larger plan of merging Packard, Nash, Hudson, and Studebaker, AMC President George W. Mason had a verbal agreement with Packard that the two companies would supply parts for each other when practical. AMC started buying Packard V8s in 1954 for the big 1955 Nash Ambassador and Hudson Hornet. These were supplied with Packard "Ultramatic" automatic transmissions - exclusively. Packard sent AMC some parts bids, but were rejected as too expensive. George W. Romney, AMC's new head decided against further relationships with Packard. Romney ordered his engineering department to develop an in-house V8 as soon as possible. The engineering department hired David Potter, a former Kaiser Motors engineer, to come in and help develop the engine. Potter had previously worked on a V8...
