The image on the front cover depicts a carbon nanotube emerging from a glowing plasma of hydrogen and carbon, as it forms around particles of a metal catalyst. Carbon nanotubes are a recently discovered allotrope of carbon. Three other allotropes of carbon-buckyballs, graphite, and diamond-are illustrated at the left, as is the molecule methane,  $\text{CH}_4$ , from which nanotubes and buckyballs can be made. The element carbon forms an amazing number of compounds with structures that follow from simple methane, found in natural gas, to the complex macromolecules that serve as the basis of life on our planet. The study of chemistry also follows from the simple to the more complex, and the strength of this text is that it enables students with varied backgrounds to proceed together to significant levels of achievement. From acids to alloys and equations to evaporation, this guide makes complex topics easy to grasp at a glance. Perfect support for coursework, homework, and exam revision. Each topic is fully illustrated, to support the information, make the facts crystal clear, bring the science to life and make studying a breeze. A large central image explains the idea visually and each topic is summed up on a single page, helping children to quickly get up to speed and really understand how chemistry works. For key ideas, "How it Works" and "Look Closer" boxes explain the theory with the help of simple graphics. And for revision, a handy "Key Facts" box provides a simple summary you can check back on later. With clear, concise coverage of all the core topics, Super Simple Chemistry is the perfect accessible guide to chemistry for children, supporting classwork, and making studying for exams the easiest it's ever been.

Revised with the assistance of new author Christopher Hadad, Ohio State University the Study Guide and Solutions Manual offers solutions to both in-text and end-of-chapter problems with an explanation of the answers.
