During recent debt limit episodes, federal officials have contended that if the debt limit were to constrain the government's ability to meet its obligations, that would be an unprecedented blemish on the nation's credit. For example, the U.S. Treasury has asserted that "(f)ailing to increase the debt limit would have catastrophic economic consequences. It would cause the government to default on its legal obligations" or that it "would represent an irresponsible retreat from a core American value: we are a nation that honors all of its commitments. It would cause the government to default on its legal obligations." Failure to pay obligations on time is regarded as a central indicator of default, although default may be triggered by a wide range of contractual provisions. More generally, the concept of default stems from contract law, and thus may be ambiguous because contract terms may be private or contracts may be incomplete, in that the consequences of some contingencies are left unspecified. For instance, the terms under which Treasury securities are offered lack any mention of payment delays or nonpayment. The ambiguity of the term "default" leads many third parties to develop their own definitions to monitor compliance with promises to pay. The U.S. Treasury in some historical instances was unable to pay all its

obligations on time or made payments on terms that disappointed creditors. Those instances resulted from extraordinary stresses on public finances. Over time, the United States has managed its finances so that its credit history compares favorably to nearly all other advanced countries.

When the war ended on August 15, 1945, I was a naval engineering cadet at the Kure Navy Yard near Hiroshima, Japan. A week later, I was demobilized and returned to my home in Tokyo, fortunate not to find it ravaged by firebombing. At the beginning of September, a large contingent of the American occupation forces led by General Douglas MacArthur moved its base from Yokohama to Tokyo. Near my home I watched a procession of American military motor vehicles snaking along Highway 1. This truly awe-inspiring cavalcade included jeeps, two-and-a-half-ton trucks, and enormous trailers mounted with tanks and artillery. At the time, I was a 21-year-old student in the Machinery Section of Engineering at the Tokyo Imperial University. Watching that magnificent parade of military vehicles, I was more than impressed by the gap in industrial strength between Japan and the U. S. That realization led me to devote my whole life to the development of the Japanese auto industry. I wrote a small article concerning this incident in *Nikkei Sangyo Shimbun* (one of the leading business newspapers in Japan) on May 2, 1983. The English translation of this story

was carried in the July 3, 1983 edition of the Topeka Capital-Journal and the September 13, 1983 issue of the Asian Wall Street Journal. The Topeka Capital-Journal headline read, "MacArthur's Jeeps Were the Toyota Catalyst.
