Excerpt: Industrial and organizational psychology (also known as I-O psychology or work psychology) is the scientific study of employees, workplaces, and organizations. Industrial and organizational psychologists contribute to an organization's success by improving the workplace and the performance, satisfaction and well-being of its people. An I-O psychologist conducts research on employee behaviors and attitudes, and how these can be improved through hiring practices, training programs, feedback, and management systems. I-O psychologists also help organizations transition among periods of change and development. Industrial and organizational psychology is related to organizational behavior and human capital. An applied science, I-O psychology is represented by Division 14 of the American Psychological Association, known formally as the Society for Industrial and Organizational Psychology (SIOP). In classic overviews of the field, Guion (1965) defines I-O psychology as "the scientific study of the relationship between man and the world of work: ... in the process of making a living" (p. 817). Blum & Naylor (1968) define it as "simply the application or extension of psychological facts and principles to the problems concerning human beings operating within the context of business and industry" (p. 4). In this book, the authors provide a cogent review of statistical and interpretive procedures that, in combination, can be used to reduce the likelihood that tests contain items that favor members of one gender, age, racial, or ethnic group over equally able members of another group, for reasons that are unrelated to the objectives and purposes of measurement. Such test items are said to be biased against the equally able members of the group that is not favored. The methods described and illustrated in this book have the potential to reducing the incidence of tests that are, in their construction, biased against members of one or more groups. These methods have the potential of controlling an important source of invalidity when test results are interpreted.
