The Blackwell Handbook of Early Childhood Development John Wiley & Sons

Confirming his moniker as “America’s philosopher of democracy,” John Dewey engaged in a series of public debates over the course of his lifetime, vividly demonstrating how his thought translates into action. These debates made Dewey a household name and a renowned public intellectual during the early to mid-twentieth century, a time when the United States fought two World Wars, struggled through an economic depression, experienced explosive economic growth and spawned a grassroots movement that characterized an entire era: Progressivism. Unfortunately, much recent Dewey scholarship neglects to situate Dewey’s ideas in the broader context of his activities and engagements as a public intellectual. This project charts a path through two of Dewey’s actual debates with his contemporaries, Leon Trotsky and Robert Hutchins, to two reconstructed debates with contemporary intellectuals, E.D. Hirsch and Robert Talisse, both of whom criticized Dewey’s ideas long after the American philosopher’s death and, finally, to two recent debates, one on home schooling and the other on U.S. foreign policy, in which Dewey’s ideas offer a unique and compelling vision of a way forward.

"The need for a guidebook enabling all those interested in Dutch art to find out at a glance which paintings and drawings by particular artists or which works of applied art of various periods are to be found in the major American public

collections is so obvious that it comes as a surprise to discover that none as ever been written. Until now anyone wishing to know where Dutch art from past centuries or the not-so-distant past could be seen or studied had to rely on memory or hearsay, or had to consult the countless catalogues and publications of the far flung individual museums. Since a fundamental goal of American collecting has been to educate people about all cultures, Dutch art, like the art of so many other nations, is found in virtually every city and town across the country. . . Now we have a guide that tells us where to find the art that we seek and that gives us a lively but professional analysis of the historical significance of these treasures."--Preface

In many criminal trials, forensic technical evidence is lacking and triers of fact must rely on the reliability of eyewitness statements, identifications, and testimony; however, such reports can be riddled with deceptive statements or erroneous recollections. Based on such considerations, the question arises as to how one should weigh such eyewitness accounts given the theoretical and empirical knowledge in this field. *Finding the Truth in the Courtroom* focuses on how legal professionals, legal/forensic psychologists, and memory researchers can decide when statements or identifications are based on truthful or fabricated experiences and whether one can distinguish between lies, deception, and false memories. The contributors, key experts in the field, assemble recent experimental work and case studies in which deception or false memory plays a dominant role. Topics discussed relate to the susceptibility to suggestive pressure (e.g., "Under which

circumstances are children or adults the most vulnerable to suggestion?", the fabrication of symptoms (e.g., "How to detect whether PTSD symptoms are malingered?"), and the detection of deceit (e.g., "Which paradigms are promising in deception detection?"), among others. By using this approach, this volume unites diverse streams of research (i.e., deception, malingering, false memory) that are involved in the reliability of eyewitness statements.
