The U.S. population is more than 80 percent urban. Recognizing that many metropolitan areas in the United States have been experimenting with various approaches to sustainability, and that despite the differences among regions, there are likely some core similarities and transferable knowledge, Roundtable members selected the metropolitan Atlanta, Georgia region as a case study. The Atlanta region provided a compelling example for exploring urban sustainability issues because of the region's rapid growth rate, well-documented challenges with water, land use, and transportation; and its level of engagement with federal government agencies on matters related to sustainability. Pathways to Urban Sustainability: Lessons from the Atlanta Metropolitan Region: Summary of a Workshop explores the Atlanta region's approach to urban sustainability, with an emphasis on building evidence based foundation upon which policies and programs might be developed. The two day workshop held on September 30 and October 1, 2010 examined how the interaction of various systems (natural and human systems; energy, water and transportations systems) affect the region's social, economic, and environmental conditions. The intent of this workshop summary is to analyze a metropolitan region so that researchers and practitioners can

improve their understanding of the spatial and temporal aspects of urban sustainability.

Higher education in the United States is a complex, diverse, and important enterprise. The latest book in the *Core Concepts in Higher Education* series brings to life issues of governance, organization, teaching and learning, student life, faculty, finances, college sports, public policy, fundraising, and innovations in higher education today. Written by renowned author John R. Thelin, each chapter bridges research, theory, and practice and discusses a range of institutions – including the often overlooked for-profits, community colleges, and minority serving institutions. A blend of stories and analysis, this exciting new book challenges present and future higher education practitioners to be informed and active participants, capable of improving their institutions.

Public debates about the terms of membership and inclusion have intensified as developed economies increasingly rely on temporary migrant labour. While most agree that temporary migrant workers are entitled to the general protection of employment laws, temporary migrants have, by definition, restricted rights to residence, full social protections and often to occupational and geographic mobility. This book raises important ethical questions about the differential treatment of temporary and unauthorised migrant workers, and permanent residents, and where the line should be drawn between exploitation and legitimate employment. Taking the regulatory reforms of Australia as a key case study, Laurie Berg explores how the influence of immigration law extends beyond its functions in regulating admission to and exclusion from a country. Berg examines the ways in which immigration law and enforcement reconfigure the relationships between migrant workers and employers, producing uncertain and coercive working conditions. In presenting an analytical approach to issues of temporary labour migration, the book develops a unique theoretical framework, contending that the concept of precariousness is a more fruitful way than equality or vulnerability to evaluate and address issues of temporary migrant labour. The book will be of great interest to scholars and practitioners of immigration law and employment

law and policy.

Sustainable development, as defined by the World Commission on Environment and Development, is

"development that meets the needs of the present without compromising the ability of future generations to meet their own needs." More specifically, sustainable development is a process of change that seeks to improve the collective quality of life by focusing on economically, socially, and environmentally sound projects that are viable in the long-term. Sustainable development requires structural economic change and the foundation of that change is investment. In developing nations with low levels of domestic savings, investment predictably comes from abroad in the form of foreign direct investment. A large and ever expanding number of international investment agreements are in place to govern these transactions. While these accords seek to foster development while mitigating the risk involved in these types investments, many questions remain unresolved. This highly insightful book reflects the contributions of a variety of world renowned experts each of which is designed to provide the reader with valuable perspective on recent developments in investment law negotiations and jurisprudence from a sustainable development law perspective. It offers answers to pertinent questions concerning advancements in investment law, including the negotiation of numerous regional and bilateral agreements as well as the increasing number of disputes resolved in the World Bank's International Centre for the Settlement of Investment Disputes (ICSID), from different developed and developing country perspectives. It lays out future directions for new treaty negotiations and dispute settlement proceedings, as well as ongoing investment promotion efforts, against a background of rapidly evolving international relationships between economic, environment and development law. It focuses on key issues in investment laws which have emerged as priorities in the negotiation of bilateral and regional investment agreements, and have been clarified through recent decisions of the ICSID and other

arbitral panel awards.

Reflecting the expertise and perspective of five leading mammalogists, the fourth edition of *Mammalogy: Adaptation, Diversity, Ecology* significantly updates taxonomy, includes a new chapter on mammalian molecular phylogenetics, and highlights several recently described species. There are close to 5,500 species in the class Mammalia, including the blue whale—the largest animal that has ever lived—and the pygmy shrew, which weighs little more than a penny. The functional diversity of mammals has allowed them to play critical roles in

every ecosystem, whether marine, freshwater, alpine, tundra, forest, or desert. Many mammal species are critically endangered and present complex conservation and management challenges. This book touches on those challenges, which are often precipitated by overharvesting and habitat loss, as well as emerging threats, such as the impact of wind turbines and white nose syndrome on bats and chronic wasting disease on deer. Among the updates and additions to the fourth edition of *Mammalogy* are numerous new photos, figures, and cladograms, over 4,200 references, as well as

- A completely new chapter on mammalian phylogeny and genomics
- Current taxonomy—including major changes to orders, suborders, and superfamilies of bats and rodents
- An explanation of the recent inclusion of whales with terrestrial even-toed ungulates
- Updates on mammalian structural, functional adaptations, and fossil history
- recent advances in our understanding of phylogeny, biogeography, social behavior, and ecology
- A discussion of two new orders and thirteen newly recognized extant families
- Reflections on the implications of climate change for mammals
- Thorough examinations of several recently described species, including Durrell's vantsira (*Salanoia durrelli*) and the Laotian rock rat (*Laonastes aenigmamus*)
- An explanation of mammalian biomechanics, such as that seen in lunge feeding of baleen whales
- Breakout boxes on unique aspects of mammals, including the syntax of bat songs, singing mice, and why there are no green mammals (unless we count algae-covered sloths)

Maintaining the accessible, readable style for which Feldhamer and his coauthors are well known, this new edition of *Mammalogy* is the authoritative textbook on this amazingly diverse class of vertebrates.

With the growing concern over the environment, new

industries and research areas have been developed to identify, monitor, regulate, and legislate environmental interactions as well as to determine and repair existing environmental damage. For both the expert and the newcomer, a quick, convenient, and comprehensive source is needed to answer questions on the rapidly increasing amount of environmental information. The Encyclopedia of Environmental Analysis and Remediation (EEAR) responds to this need by providing the reader with an in-depth examination of the environmental analysis and remediation fields in a single eight-volume reference source.

Lindsey R. Swindall examines the historical and political

context of acclaimed African American actor Paul Robeson's three portrayals of Shakespeare's Othello in the United Kingdom and the United States. These performances took place in London in 1930, on Broadway in 1943, and in Stratford-upon-Avon in 1959. All three of the productions, when considered together, provide an intriguing glimpse into Robeson's artistry as well as his political activism. The Politics of Paul Robeson's Othello maintains that Robeson's development into a politically minded artist explicates the broader issue of the role of the African American artist in times of crisis. Robeson (1898-1976) fervently believed that political engagement was an inherent component of the role of the artist in society, and his performances demonstrate this conviction. In the 1930 production, audiences and critics alike confronted the question: Should a black actor play Othello in an otherwise all-white cast? In the 1943 production on Broadway, Robeson consciously used the role as a form for questioning theater segregation both onstage and in the seats. In 1959, after he had become well known for his leftist views and sympathies with Communism, his performance in a major Stratford-upon-Avon production called into question whether audiences could accept onstage an African American who held radical-and increasingly unpopular-political views. Swindall thoughtfully uses Robeson's Othello performances as a collective lens to analyze the actor and activist's political and intellectual development.
