Kenya, Uganda and Tanzania have minorities from the Indian sub-continent amongst their population. The East African Indians mostly reside in the main cities, particularly Nairobi, Dar es Salaam, Zanzibar, Mombasa, Kampala; they can also be found in smaller urban centres and in the remotest of rural townships. They play a leading social and economic role as they work in business, manufacturing and the service industry, and make up a large proportion of the liberal professions. They are divided into multiple socio-religious communities, but united in a mutual feeling of meta-cultural identity. This book aims at painting a broad picture of the communities of Indian origin in East Africa, striving to include changes that have occurred since the end of the 1980s. The different contributions explore questions of race and citizenship, national loyalties and cosmopolitan identities, local attachment and transnational networks. Drawing upon anthropology, history, sociology and demography, Indian Africa depicts a multifaceted population and analyses how the past and the present shape their sense of belonging, their relations with others, their professional and political engagement.

Standardized tests have been selected as a key assessment factor in expanding the academic achievement of the national student population. However, these tests position immigrant students at the risk of academic failure, leading education experts to search for new strategies and teaching models. The Handbook of Research on Assessment Practices and Pedagogical Models for Immigrant Students is a critical research publication that focuses on research-based pedagogical practices for teaching immigrant students. Edited by a prominent IGI Global editor, this book examines the latest professional development models and assessment practices of English learners (ELs). Covering essential topics such as second language acquisition (SLA), classroom management, teacher education, refugee resettlement programs, and more, this publication is a valuable resource for academicians, professionals, researchers, administrators, faculty, and classroom teachers as the social and academic needs of English language learners continue to present a challenge for many schools and teachers.

An exceptional resource, this 1988 book provides a comprehensive anthology in English of the major texts of German literary and aesthetic theory between Lessing and Hegel. The texts are crucial to an understanding not only of the Romantic period itself, but also of the foundational arguments of literary theory.

Few scientific debates have been more protracted and intense than whether we are born with our cognitive ability, whether our environment moulds it or whether these two things interact to produce it. The Origins of Human Potential offers a new insight into the arguments by showing that many of the assumptions on both sides, are false. Ken Richardson re-examines evidence about the nature of genes in

development, the environment and the development of cognitive ability and the nature of cognitive ability itself. Can it really be measured in an IQ test, like height or weight? Ken Richardson's human-centred view describes the evolutionary context of our dynamic, changeable environments and the creative individual at the heart of the debate. It will be of great relevance to psychologists and education policy makers and should be read by all those with an interest in our children's future.

The book covers Hume's biographical development; his self appraisal as a 'man of letters'; his philosophical writings with emphasis on their direct and indirect economic content; his self-aware criticism of his approach to the Treatise and the development of his rhetorical understanding of the needs/interests of his readers/potential readers; his rhetorical turn and Ciceronian adjustments to his writing within the genre of the essay, including his two Enquiries; his political essays and his nine essays conventionally classified as economic. The work aims to show how the Treatise and its vicissitudes gave rise to his economics. The work takes a broad approach to Hume and his writings on economic topics from the Treatise, through the Enquires and on to his political and economic essay. The work also explores Hume's textual method and charts the move from abstruse philosophy to a Ciceronian engagement with social conditions and problems as developed in the Political Discourses. In addition, Hume's extensive use of analogies is also brought into clearer focus than is found in other texts. Overall, the book will be of great use to both postgraduates and undergraduates alike.

The Reader's Guide to the History of Science looks at the literature of science in some 550 entries on individuals (Einstein), institutions and disciplines (Mathematics), general themes (Romantic Science) and central concepts (Paradigm and Fact).
