Jerry Herron argues that the vision of culture as an end in itself has been all too thoroughly fulfilled in the present state of humanities education, but only because the humanities have lost their social function. In this book, he attempts to provide a constructive alternative to the nostalgia and pessimism currently prevailing. In Herron's view, the humanities are not really irrelevant; it is that the intellectual and political conversation that they represent is only latent, rather than publicly manifest. The humanities can only be justified in a world of work and power by proving useful in that world. The academic humanities harbor a general intellectual conversation that could potentially be interesting and even useful to society at large. Arguing that the prevailing analyses are wide of the mark, Herron recommends that universities undertake to promote a new cultural literacy. Based on a collaborative enterprise open to all, its focus is the effective sharing of information and experience.

Binary systems for the treatment of cancer potentially are among the most attractive of the new therapeutic modalities that currently are under investigation. The basic concept is to selectively destroy malignant cells while concomitantly sparing normal tissue. Neutron capture therapy (NCT) is the binary system that has been the subject of the Fifth International Symposium on Neutron Capture Therapy, which was held September 13-17, 1992, in Columbus, Ohio, under the auspices of the International Society for Neutron Capture Therapy. Its objective was to bring together researchers from throughout the world and to provide a forum at which they could present the latest advances in the development of Neutron capture therapy. Neutron capture therapy has largely, but not exclusively, focused on the use of boron-10 as the target nuclide. Boron neutron capture therapy (BNCT) is based on the nuclear reaction that occurs when the stable isotope, boron-10, absorbs low-energy non ionizing thermal neutrons to yield alpha particles and recoiling lithium-7 nuclei. The size and energy of these high linear energy transfer (LET) particles result in their being confined largely to the cells in which the capture reaction occurs. For BNCT to be successful, a sufficient number of  $^{10}\text{B}$ -atoms must be localized within neoplastic cells, and enough thermal neutrons must be delivered and absorbed by the  $^{10}\text{B}$  to produce a lethal  $^{10}\text{B}(n,\alpha)^7\text{Li}$  reaction. Two major problems must be surmounted.

"Drawing on the research that won 'Reading Don't Fix No Chevys' the NCTE David H. Russell Award, Smith and Wilhelm take Chevys out of the showroom onto the road, presenting classroom-tested units, lessons, and activities that get boys reading and writing and keep them involved in literacy learning. Going with the Flow fully illustrates their approach to designing and sequencing instruction, taking you from developing activities that prepare students for success before they are even given assignments to fostering meaningful classroom discussions. Even if you haven't read 'Reading Don't Fix No Chevys,' Smith and Wilhelm provide a succinct summation of their research to get you started, then give you classroom transcripts, lesson-planning tips, and strategies for interacting with students to help you implement their ideas--Amazon.com. At last, a right up-to-the-minute volume on a topic of huge national and international importance. As governments around the world battle voter apathy, the need for new and modernized methods of involvement in the polity is becoming acute. This work provides information on advanced research and case studies that survey the field of digital government. Successful applications in a variety of government settings are delineated, while the authors also analyse the implications for current and future policy-making. Each chapter has been prepared and carefully edited within a structured format by a known expert on the individual topic.
