Much has been made of the image of writers in Paris—romanticized and idealized in fiction and on screen, these émigré artists in sidewalk cafés spark our imagination with unusual force. But rarely do the real-life figures speak to us directly to comment on their work, their lives, and their reasons for choosing to live and work in Paris. In these striking interviews, E. M. Cioran, Julio Cortázar, Brion Gysin, Eugène Ionesco, Carlos Fuentes, Jean-Claude Carrière, Milan Kundera, Nathalie Sarraute, and Edmund Jabès do just this as they speak out on the risks they've taken, on their struggles and discoveries, on tradition, challenge, and their near-unanimous status as émigrés. A consummate interviewer, Jason Weiss spoke in depth with these pathbreaking artists regarding their lives, their craft, and their very special relationship to Paris. Their writings were naturally the main focus of investigation, but Weiss' concern was always to build on previous interviews, to deepen certain lines of inquiry and open new ones, to contribute fresh material to the ongoing record. The result is a series of invigorating, detailed portraits that go beyond personality, habits, and pleasures to examine some of the causes and effects in the unique relationship of place and temperament. Writing at Risk suggests that there is more than we suspect binding writers of such disparate

cultures and genres...perhaps their attitudes toward writing, perhaps their common attraction to risk. Readers will relish the immediacy of these interviews and will want to (re)discover the work of these exceptional artists.

This book brings together a variety of voices – students and teachers, journal editors and authors, writers from the global north and south – to interrogate the notion of risk as it applies to the production of academic writing. Risk-taking is viewed as a productive force in teaching, learning and writing, and one that can be used to challenge the silences and erasures inherent in academic tradition and convention. Widening participation and the internationalisation of higher education make questions of language, register, agency and identity in postgraduate writing all the more pressing, and this book offers a powerful argument against the further reinforcement of a

It is inspirational to hear words that rhyme, uplifting our being when a line and a stanza impart a meaning using the song-like attributes of articulated statements. The command of a poem makes one remember, making him/her absorb and learn more. University students were able to recall difficult formulas in higher mathematics in the past by reciting them in a song-like fashion. It is real and it does work. The author used the method a lot during his college years singing, reciting them, and using them successfully to pass his most difficult exams. Rufran have always wanted to write about risk management principles in a poetic form. The uncanny characteristic and power of a poem to send the intended message with amazing clarity catches our senses. Amazingly, we suddenly become more receptive. We tune in, listen more and even unconsciously let down our guard. Our biases disappear and embraces the message to fully consider the substance. Today, we are proud and happy to publish an original 18-stanza rhyme poem of (8-6-8-6 metric) in a fully illustrated 8.5" x 8.5" children book for future and present risk managers. Rufran, who is a passionate project management professional, is a also an avid freelance artist for many years, did all the illustrations himself. The pleasing element of a rhyming poem brings joy and knowledge to many, especially those with heightened senses and sensibilities. "Have you ever stopped

doing what you were doing, sat down, and asked yourself, "What is the purpose of life? What is it that people do every day? What is it that matters most to a person regardless of demographic?" Yes, there are various perspectives but it all come down to one central element, and that is to manage risk. Yes, the purpose of life is managing risk. Even in our sleep, and in our dreams, we administer risks. In our beliefs, in our religion, in our pursuit to be a good person, we manage risks. People have to manage daily the risk of sin, e.g. of temptation, of jealousy, gluttony, revenge, and greed. One needs to control his vice, his expenses, his career, and many others. It is in front of all of us and in the very fabric of our daily lives. Risk management is the only thing we do for a living. This intriguing concept drives the reason why we go to work every day. We all have one main, central purpose yet we all go about it almost unconsciously. We are still employed by companies we worked in to manage risk. "If there is no risk to manage, we become useless." In view of the aforementioned, you can refer to this as the risk management poem. Better still, everyone's poem. After all, all of us in reality are managing risks. We are all risk managers in this world! Risk-based management is a serious approach and a philosophy that takes risk as major consideration while managing any endeavor throughout its life cycle. Managing risks increase the probability of success in achieving organizational and individual objectives. Understanding risk and its governing concepts is therefore of utmost importance to all. It simply means that risk should be the main contemplation by anyone while keeping an

eye to achieving personal and business objectives. Risk is not only as a factor or featured element of management but a primary concern in pursuit of a goal. It is the main character at play. The Risk Manager's Poem highlights the importance of correlating risks and objectives in every turn. Failing to recognize the links between them means a greater potential to missing final objectives. This volume focuses on how writing is produced both during the moment-to-moment process of inscribing a text and during real time broadly conceived as the context for studying the writing process as writers plan, draft, revise, and confer with others. The chapters break open these generic categories by studying special populations of writers not studied before, by specifying the writing environment, by developing more detailed models of the writing process, and by offering critical analyses of current research methods and paradigms. In a renewed climate of educational need such as we are now experiencing, research on writing processes can contribute an important piece to the puzzle of effective

instruction. Theories of instruction ought to be integrated with theories of learning and both must incorporate knowledge about writers' processes. The chapters in this volume move toward such a view of research on writing.

Alpine mountaineering and African exploration. The consolations offered by this geography of risk are precariously predicated on the stability of dominant Victorian definitions of people and places. Women, men, the labouring and middle classes, the English and the Irish, Africa and Africans: all have assigned identities which allow risk to be located and contained. When identities shift and boundaries fail, danger and safety begin to appear in all the wrong places. The texts that this study focuses on reveal the ways in which risk moralizes and naturalizes the economic and political institutions of industrial, imperial culture during a period of unprecedented expansion and change.

A risk conundrum can be viewed as a risk that poses major issues in assessment, and whose management is not easily engaged. Such perplexing problems can either paralyze or badly delay risk analysis and directions for progression. Rather than simply focusing on the progress in risk analysis that has already been made, it is crucial to consider what has been learnt about these seemingly unmanageable problems and how best to move forward. Risk Conundrums seeks to answer this question by bringing together a range of key thinkers in the field to explore key issues such as risk communication, uncertainty, social trust, indicators and metrics, and risk management, drawing upon case study examples including natural disasters, terrorism, and energy transitions. The initial chapters address risk conundrums, their properties, and the

challenges they pose. The book then turns to a greater emphasis on systemic and regional risk conundrums. Finally, it considers how risk management can be changed to address these unsolvable conundrums. Alternative pathways are defined and scrutinized and predictions for future developments set out. This book will be of great interest to students and scholars of risk governance, environmental policy, and sustainable development.

Some university EFL students cannot write even a simple coherent English sentence after four years of study at the university level and some of them prefer to be silent in class and they don't share their opinions because they are afraid of public humiliation. These two factors will reduce among students if teachers teach them to take risk and request learners to assess their own writing, risk-taking as a personality factor is an important characteristic of successful second language learning and self-assessment help learners self-confidence. This book aims to investigate risk-takers and non-risk takers social and academic life, how these two groups assess their own work, and the most important point is that try to teach learners 'take risk in their academic and social life in a logical way, if they win they will be happy, if they lose they will be wise'.

This text focuses on insurance as an industry and speculates what would happen if the insurance industry were to be deregulated. The basics of insurance are incorporated throughout, which allows for a greater understanding of the possible implications of deregulation and trends in competition. . . . What could have been dry and tedious has

instead been made pleasant by Banks McDowell, who writes with an easy-to-read and informative style. Examples of small case studies are woven into the text to further illustrate the issues. The material is clear, concise, and thought-provoking and is presented entirely without prejudice. Business Information ALERT The rapid rise in insurance premium costs coupled with the problem of obtaining insurance at any cost for some applicants has precipitated a crisis in the insurance industry. Many scholars and industry analysts have suggested deregulation as a solution, arguing that the actions of a free market are the only efficient means of controlling costs and affordability. McDowell offers an in-depth examination of the arguments in favor of and against deregulation and analyzes what the probable effects of such deregulation would be. Basing his study on the results of past experiments, scholarly recommendations, economic analysis, and his own work in the field, McDowell fully explores the various types of deregulation that could be implemented and assesses the degree to which they would fulfill the goals of maintaining the financial solvency of insurance companies, keeping premiums from being excessive, preventing discrimination among policyholders, and making insurance available and affordable to all who want it. McDowell begins with a discussion of what deregulation means. Subsequent chapters trace the history of insurance regulation, examine the complex goals of governmental insurance regulation, and explore the nature of insurance in contemporary society. Turning to a discussion of competition, McDowell illustrates the various levels at which

insurers can compete and examines both the problems of regulation in each area and the likely effects of introducing such competition. The issue of whether regulation of the industry should be at the federal or state level receives thorough treatment, as does the question of using insurance company mergers to increase efficiency and lower costs. McDowell concludes with an enlightening discussion of the series of choices among aims and policies which must be made before the decision to deregulate or not is taken. Insurance company executives and attorneys as well as students of the insurance industry or of insurance law will find McDowell's work a cogent exposition of the complex facets of the insurance deregulation debate.

The world is becoming more hazardous as natural and social processes combine to create complex situations of increased vulnerability and risk. There is increasing recognition that this trend is creating exigencies that must be dealt with. The common approach is to delegate the task of preparing an emergency plan to someone. Often

that person is expected to get on with job but rarely is the means and instruction of how to write such a plan provided to them. There are a host of instances in which the letter of the law, not the spirit, is honoured by providing a token plan of little validity. David Alexander provides, in this book, the assistance needed to write an emergency plan. It is a practical how to manual and guide aimed at managers in business, civil protection officers, civil security officials, civil defence commanders, neighbourhood leaders and disaster managers who have been tasked with writing, reviewing or preparing emergency plans for all kinds of emergency, disaster or catastrophe. He takes the reader through the process of writing an emergency plan, step by step, starting with the rationale and context, before moving on through the stages of writing and activating a basic, generic emergency plan and concludes with information on specific kinds of plan, for example, for hospitals and cultural heritage sites. This practical guide also provides a core for postgraduate training in emergency management and has been written in such a way that it is not tied to the legal constraints of any particular jurisdiction.

boundaries fail, danger and safety begin to appear in all the wrong places. In over 25 years of managing risks across a range of disciplines and industries, I have in only one instance, had adequate resources to implement appropriate risk strategies. That was following a terrorist attack on the Jakarta Embassy when the government of the day, insisted that all our overseas missions would be protected to a minimum standard. At the time, I was Manager, Property and Security for the Australian Trade Commission with a remit spanning 60 nations. In a few short months, my team and I built a \$56 million budget, and for a short period, our greatest challenge was spending the money fast enough to meet the program timelines. For the rest of my career, the biggest challenge has been finding adequate funding - and I have to say, that with research, practice and dedication, I've become rather good at it. Even without having met you, I'm going to suggest that finding sufficient funds to do what you know you need to do, is probably your biggest challenge right now. This book was designed with one purpose in mind - to help you get the resources you need to support the right risk treatments. It was born when a friend of mine asked me one day, "how can I demonstrate the business case for my risk treatments?" That simple question proved much more difficult to answer than I would have thought. It did however, prompt me to change one of my master's electives to conduct a research project into the business case for investments in risk management. That in turn, lead me to create a training course the topic, and before long, the workbook from that course became this book.

In addition, he discusses risk management in the context of engineering complex, large-scale enterprise systems. Applies Various Methods to Risk Engineering and Analysis Problems This practical guide enables an understanding of which processes and analytical techniques are valid and how they are best applied to specific systems engineering environments.
