Popular Science gives our readers the information and tools to improve their technology and their world. The core belief that Popular Science and our readers share: The future is

going to be better, and science and technology are the driving forces that will help make it better.

Software engineering has advanced rapidly in recent years in parallel with the complexity and scale of software systems. New requirements in software systems yield innovative approaches that are developed either through introducing new paradigms or extending the capabilities of well-established approaches. *Modern Software Engineering Concepts and Practices: Advanced Approaches* provides emerging theoretical approaches and their practices. This book includes case studies and real-world practices and presents a range of advanced approaches to reflect various perspectives in the discipline.

Includes Part 1, Number 2: Books and Pamphlets, Including Serials and Contributions to Periodicals (July - December)

The discipline of Services Science, introduced by IBM in 2002, has emerged and matured in a true transdisciplinary atmosphere. Encompassing disciplines not only in management and engineering, it also draws from disciplines such as social and cognitive sciences, law, ethics, economics etc. to address the theoretical and practical aspects of the challenging services industry

and its economy. Services Science leverages methods, results and knowledge stemming from these disciplines towards the development of its own concepts, methods, techniques and approaches thus creating the basis for true trans-disciplinary gatherings and the production of transdisciplinary results. Services Science is building a concrete framework for transdisciplinary purposes.

IESS1.0 – the First International Conference on Exploring Services Science – was the first international conference held in Europe in this domain. The conference took place during February 17–19, 2010 in Geneva, Switzerland. The goal of the conference was to build upon the growing community to further study and understand this emerging discipline. Academics, researchers and practitioners of all disciplines were invited to contribute their results and approaches to Services Science in a trans-disciplinary setting. In order to achieve the best possible mix of disciplines and their representation, the conference call for papers was structured around transdisciplinary service research topics including service innovation, service exploration, service - sign, service engineering, and service sustainability, and around more disciplinary oriented service contexts such as: sectors and services, IT and services, foundations of services science, and governance and management.

formal diagnosis, and use assessment data to guide individualized intervention in clinical and school settings. Chapters review state-of-the-art instruments and approaches for evaluating specific areas of impairment in ASD and co-occurring emotional and behavioral disorders. Considerations in working with children of different ages are highlighted. With a primary focus on children, several chapters also address assessment of adolescents and adults. **• New to This Edition**

- *Chapter on key implications of DSM-5 diagnostic criteria, plus related updates throughout the volume.
- *Chapter on advances in early identification (ages 0-3).
- *Chapter with in-depth case examples illustrating the evaluation decision-making process and common diagnostic challenges.
- *Chapters on pseudoscience (including strategies for advising parents) and future directions in the field.
- *Current assessment data, numerous new and revised measures, and cutting-edge screening approaches.
