In many ways Tony Foster's life has never been ordinary. He was an adventurer, an entrepreneur, and a wheeler-dealer who risked much to achieve his idea of success. He flew patched-up agricultural aircraft a few feet above croplands throughout the world, sometimes in dictatorships where life was cheap and death came easy. He put together a global multi-million dollar business deal whose only pay-off was a prison term. But in other ways his life was not uncommon. He lived on too many coffees, too many cigarettes, too much stress, too much rushing to keep from falling behind. But as the tentacles of business, the legal and penal systems wrapped themselves around him and began to squeeze, his own system revolted. In his early-forties he suffered two heart attacks. BY-PASS is told with humor and a typically energetic enthusiasm about a compelling episode in a fascinating life. But more importantly it is a constructive story of hope and survival for anyone who has been touched by the modern scourge of heart disease.

In "Moths to the Flame", Rawlins took lay readers on a tour of the exciting and sometimes scary world to which computers are leading us. Written in an accessible, anecdotal form, his newest book is for those who are new to computers and want to know what is "under the hood".

As the title suggests, this book examines the psychology of interpersonal relations. In the context of this book, the term "interpersonal relations" denotes relations between a few, usually between two, people. How one person thinks and feels about another person, how he perceives him and what he does to him, what he expects him to do or think, how he reacts to the actions of the other--these are some of the phenomena that will be treated. Our concern will be with "surface" matters, the events that occur in everyday life on a conscious level, rather than with the unconscious processes studied by psychoanalysis in "depth" psychology. These intuitively understood and "obvious" human relations can, as we shall see, be just as challenging and psychologically significant as the deeper and stranger phenomena. The discussion will center on the person as the basic unit to be investigated. That is to say, the two-person group and its properties as a superindividual unit will not be the focus of attention. Of course, in dealing with the person as a member of a dyad, he cannot be described as a lone subject in an impersonal environment, but must be represented as standing in relation to and interacting with another person. The chapter topics included in this book include: Perceiving the Other Person; The Other Person as Perceiver; The Naive Analysis of Action; Desire and Pleasure; Environmental Effects; Sentiment; Ought and Value; Request and Command; Benefit and Harm; and Reaction to the Lot of the Other Person.

An updated edition that situates a landmark 1920s children's picture book in its historical and social context.

"It's a matter of death...and life!" "A compelling story full of soul from an author who never disappoints." – Paola Rizzato, Heysham, England "Honest and heartfelt. Brilliant!" – Joan Cerio, host of BlogTalkRadio's Earth Energy Forecast "Heart-wrenching and life-affirming." – Dan Stone, author of Ice on Fire Helps readers understand what narrative is, how it is constructed, and how it changes when the medium changes.

John Dalton's molecular structures. Scatter plots and geometric diagrams. Watson and Crick's double helix. The way in which scientists understand the world—and the key concepts that explain it—is undeniably bound up in not only words, but images. Moreover, from PowerPoint presentations to articles in academic journals, scientific communication routinely relies on the relationship between words and pictures. In Science from Sight to Insight, Alan G. Gross and Joseph E. Harmon present a short history of the scientific visual, and then formulate a theory about the interaction between the visual and textual. With great insight and admirable rigor, the authors argue that scientific meaning itself comes from the complex interplay between the verbal and the visual in the form of graphs, diagrams, maps, drawings, and photographs. The authors use a variety of tools to probe the nature of scientific images, from Heidegger's philosophy of science to Peirce's semiotics of visual communication. Their synthesis of these elements offers readers an examination of scientific visuals at a much deeper and more meaningful level than ever before.

It's inevitable that all runners who have been pounding the pavement for a very long time will eventually slow down. Having run every day since November 30, 1978, Scott Ludwig certainly falls into this category. Considering that he can no longer run a single mile at the pace he ran 26 of them when he set his marathon best many years ago, Ludwig finds he is ready to accept the reality of slowing down with age. Now that he has entered the ranks of the "grizzled veterans," he seeks to offer runners all the wisdom and insight he gained from his many years—and miles—on the roads and trails. A "do as I say, not as I do" runner, Ludwig has compiled his advice for runners who find they may not run quite as fast as they used to in *Running Out of Gas*, a humorous take on aging gracefully. Relating his own personal running anecdotes, Ludwig prepares runners for what's to come, while sharing a few laughs along the way. Runners of all ages and mileage will enjoy Scott Ludwig's *Running Out of Gas*.
