And every September, almost as an afterthought, something else is mentioned--something that is actually free! The latest version of Mac OS. You, of course, need to own a Mac computer (such as MacBook, Mac Mini or iMac) to get it, but Apple keeps updates absolutely free. When Mac updates it's OS, it tends to follow the formula as iOS: there are lots of changes, but a lot of them are not very obvious. The purpose of this book is twofold: one, to help you understand all the biggest features; two, to help you if you've never used a Mac before.This book is intended for people who want to get started quickly. For that reason, it's not as com-prehensive as other guides. If you want to know about some feature buried deep under the hood that you'll never use, then there are other books for you--I'm

sure they'll make good doorstops when you finish. If you just want a simple guide that tells you what you need to know, so you can use your com-puter already, then this book is for you. If you're new to Mac--perhaps switching over from Windows, then this book will help you figure out all the similar-ities and differences; because so many people come to Mac from Windows, this book is written in a way to help with that transition.I purposely have done my best to make this handbook a little more casual and fun then what you expect from most Mac OS manuals. Mac OS is an operating system, and any guide you read should be an equally fun read. Each chapter starts with bullet points on what will be covered, so if something you already know, you can skip right ahead; if you only need to know how to use new features, the book is also formatted in a way that these stand out.Are you ready to start enjoying the new Mac OS? Then let's get started!

ÊIf my present reader happens to be a Boy Scout or a scout-master who wants the scouts to build a tower for exhibition purposes, he can do so by following the directions here given, but if there is real necessity for haste in the erection of this tower, of course we cannot build one as tall as we might where we have more time. With a small tower all the joints may be quickly lashed together with strong, heavy twine, rope, or even wire; and in the wilderness it will probably be necessary to bind the joints with pliable roots, or cordage made of bark or withes; but as this is not a book on woodcraft we will suppose that the reader has secured the proper material for fastening the joints of the frame of this signal-tower and he must now shoulder his axe and go to the woods in order to secure the necessary timber. First let him cut eight straight polesÑthat is, as straight as he can find them. These poles should be about four and one half inches in diameter at their base and sixteen and one half feet long. After all the branches are trimmed off the poles, cut four more sticks each nine feet long and two and a half or three inches in diameter at the base; when these are trimmed into shape one will need twenty six or seven more stout sticks each four and one half feet long for braces and for flooring for the platform.
