This book collects selected articles addressing several currently debated issues in the field of international macroeconomics. They focus on the role of the central banks in the debate on how to come to terms with the long-term decline in productivity growth, insufficient aggregate demand, high economic uncertainty and growing inequalities following the global financial crisis. Central banks are of considerable importance in this debate since understanding the sluggishness of the recovery process as well as its implications for the natural interest rate are key to assessing output gaps and the monetary policy stance. The authors argue that a more dynamic domestic and external aggregate demand helps to raise the inflation rate, easing the constraint deriving from the zero lower bound and allowing monetary policy to depart from its current ultra-accommodative position. Beyond macroeconomic factors, the book also discusses a supportive financial environment as a precondition for the rebound of global economic activity, stressing that understanding capital flows is a prerequisite for economic-policy decisions.

The Routledge Handbook of the History of Global Economic Thought offers the first comprehensive overview of the long-run history of economic thought from a truly international perspective. Although globalization has facilitated the spread of ideas between nations, the history of economics has tended to be studied either thematically (by topic), in terms of different currents of thought, or individually (by economist). Work has been published in the past on the economic thought traditions of specific countries, but this pioneering volume is unique in offering a wide-ranging comparative account of the development of economic ideas and philosophies on the international stage. The volume brings together leading experts on the development of economic ideas from across the world in order to offer a truly international comparison of the economics within nation-states. Each author presents a long-term perspective on economics in their region, allowing global patterns in the progress of economic ideas over time to be identified. The specially commissioned chapters cover the vast sweep of the history of economics across five world regions, including Europe (England, Scotland, Ireland, Italy Greece, Spain, Portugal, Germany, Sweden, Russia and the Ukraine), the Americas (the USA, Canada, Mexico and Central America, Spanish-Speaking South America, Brazil and the Caribbean), the Middle East (Turkey, Israel, Arab-Islamic Economics, Persia/Iran, North Africa), Africa (West Africa, Southern Africa, Mozambique and Angola), and the Asia-Pacific Region (Australia and New Zealand, China, Southeast Asia, the Asian Tigers, India.) This rigorous, ambitious and highly scholarly volume will be of key interest to students, academics, policy professionals and to interested general readers across the globe.

Gregory Daco, Head of US Macroeconomics for Oxford Economics, will present a global economic outlook with a special emphasis on recent financial market developments. He will explore the underlying causes for subpar growth in emerging markets, analyze the economic slowdown in China, and review growth prospects for the Eurozone and Japan. Pedro Antunes, Deputy Chief Economist of The Conference Board of Canada, will present the Canadian and provincial outlooks. In addition, Pedro will describe trade opportunities in U.S. and fast-growth markets where Canadian organizations can boost their growth prospects. After strong growth in 2017 and early 2018, global economic activity slowed notably in the second half of last year, reflecting a confluence of factors affecting major economies. China's growth declined following a combination of needed regulatory tightening to rein in shadow banking and an increase in trade tensions with the United States. The euro area economy lost more momentum than expected as consumer and business confidence weakened and car production in Germany was disrupted by the introduction of new emission standards; investment dropped in Italy as sovereign spreads widened; and external demand, especially from emerging Asia, softened. Elsewhere, natural disasters hurt activity in Japan. Trade tensions increasingly took a toll on business confidence and, so, financial market sentiment worsened, with financial conditions tightening for vulnerable emerging markets in the spring of 2018 and then in advanced economies later in the year, weighing on global demand. Conditions have eased in 2019 as the US Federal Reserve signaled a more accommodative monetary policy stance and markets became more optimistic about a US-China trade deal, but they remain slightly more restrictive than in the fall.
