Addiction is a powerful and destructive condition impacting large portions of the population around the world. While typically associated with substances such as drugs and alcohol, technology and gaming addiction have become a concern in recent years as technology use has become ubiquitous. *Gaming and Technology Addiction: Breakthroughs in Research and Practice* explores the social and psychological implications of technology and gaming addiction in addition to ways to manage and treat this unique form of addiction. Focusing on emerging research, case studies, and future outlooks, this comprehensive publication is an essential resource for psychologists, counselors, graduate-level students, and researchers studying psychology and technology use.

This book describes the setup of digital enterprises and how to manage them, focusing primarily on the important knowledge and essential understanding of digital enterprise management required by managers and decision makers in organizations. It covers ten essential knowledge areas of this field: • Foundation of Digital Enterprise • Technology Foundation and Talent Management for Digital Enterprise • Digital Enterprise Strategy Planning and Implementation • B2C Digital Enterprise: E-tailing • B2C Digital Enterprise: E-Services • B2B Digital Enterprise and Supply Chain • Digital Platforms • Digital Marketing and Advertising • Digital Payment Systems • Mobile Enterprise Overall, this text provides the reader with the basics to understand the rapid development of digitization, facilitated by the dramatic advancements in digital technologies, extensively connected networks, and wider adoption of computing devices (especially mobile devices), as more and more organizations are realizing the strategic importance of digitization (e.g., sustainable growth of the organization, competitive advantage development and enhancement) and are embarking on digital enterprise.

Changing business environments and information technology advancements fundamentally reshaped the traditional information landscape in our contemporary society, urging companies to seek innovative ways to diffuse and manage assets on a global scale. It is crucial for society to understand the new methodologies and common practices that organizations can utilize to leverage their knowledge into practice. *Global Information Diffusion and Management in Contemporary Society* is an essential reference source featuring research on the development and implementation of contemporary global information management initiatives in organizations. Including coverage on a multitude of topics such as data security, global manufacturing, and information governance, this book explores the importance of information management in a global context. This book is ideally designed for managers, information systems specialists, professionals, researchers, and administrators seeking current research on the theories and applications of global information management.

This book draws new attention to domain-specific conceptual modeling by presenting the work of thought leaders who have designed and deployed specific modeling methods. It provides hands-on guidance on how to build models in a particular domain, such as requirements engineering, business process modeling or enterprise architecture. In addition to these results, it also puts

forward ideas for future developments. All this is enriched with exercises, case studies, detailed references and further related information. All domain-specific methods described in this volume also have a tool implementation within the OMiLAB Collaborative Environment – a dedicated research and experimentation space for modeling method engineering at the University of Vienna, Austria – making these advances accessible to a wider community of further developers and users. The collection of works presented here will benefit experts and practitioners from academia and industry alike, including members of the conceptual modeling community as well as lecturers and students.

This book constitutes the refereed conference proceedings of the 14th IFIP WG 6.11 Conference on e-Business, e-Services and e-Society, I3E 2015, held in Delft, The Netherlands, in October 2015. The 40 revised full papers presented together with 1 keynote panel were carefully reviewed and selected from 65 submissions. They are organized in the following topical sections: adoption; big and open data; e-business, e-services, and e-society; and witness workshop.

This book presents scientific interactions between the three interwoven and challenging areas of research and development of future ICT-enabled applications: software, complex systems and intelligent systems. Software intensive systems heavily interact with other systems, sensors, actuators, and devices, as well as other software systems and users. More and more domains involve software intensive systems, e.g. automotive, telecommunication systems, embedded systems in general, industrial automation systems and business applications. Moreover, web services offer a new platform for enabling software intensive systems. Complex systems research focuses on understanding overall systems rather than their components. Such systems are characterized by the changing environments in which they act, and they evolve and adapt through internal and external dynamic interactions. The development of intelligent systems and agents features the use of ontologies, and their logical foundations provide a fruitful impulse for both software intensive systems and complex systems. Research in the field of intelligent systems, robotics, neuroscience, artificial intelligence, and cognitive sciences is a vital factor in the future development and innovation of software intensive and complex systems.

The integration of recent technological advances into modern business processes has allowed for greater efficiency and productivity. However, while such improvements are immensely beneficial, the modeling and coordination of these activities offers a unique set of challenges that must be addressed. *Automated Enterprise Systems for Maximizing Business Performance* is a pivotal reference source for the latest scholarly research on the modeling and application of automated business systems. Featuring extensive coverage on a variety of topics relating to the design, implementation, and current developments of such systems, this book is an essential reference source for information system practitioners, business managers, and advanced-level students seeking the latest research on achievements in this field. This publication features timely, research-based chapters within the context of business systems including, but not limited to, enterprise security, mobile technology, and techniques for the development of system models.

This book constitutes the refereed proceedings of the 5th International Workshop on Learning Technology for Education in Cloud,

LTEC 2016, held in Hagen, Germany, in July 2016. The 25 revised full papers presented were carefully reviewed and selected from 51 submissions. The papers are organized in topical sections on learning technologies; learning tools and environment; MOOC for learning; problem solving and knowledge transfer; case study.

In an environment where some countries are coming out of the recession at different speeds and others remain in a gloomy economic environment, education plays a vital role in reducing the negative impact of the global economic problems. In this sense, new technologies help to generate human resources with a better quality of education.

Augmented Reality for Enhanced Learning Environments provides emerging research on using new technologies to encourage education and improve learning quality through augmented reality. While highlighting issues such as global economic problems impacting schools and insufficient aid, this publication explores new technologies in emerging economies and effective means of knowledge and learning transfer. This book is a vital resource for teachers, students, and aid workers seeking current research on creating a new horizon in science and technology to strengthen the current system of learning.

With advancing information technology, businesses must adapt to more efficient structures that utilize the latest in robotics and machine learning capabilities in order to create optimal human-robot cooperation. However, there are vital rising concerns regarding the possible consequences of deploying artificial intelligence, sophisticated robotic technologies, automated vehicles, self-managing supply modes, and blockchain economies on business performance and culture, including how to sustain a supportive business culture and to what extent a strategic fit between human-robot collaboration in a business ecosystem can be created. The Handbook of Research on Strategic Fit and Design in Business Ecosystems is a collection of innovative research that builds a futuristic view of evolving business ecosystems and a deeper understanding of business transformation processes in the new digital business era. Featuring research on topics such as cultural hybridization, Industry 4.0, and cybersecurity, this book is ideally designed for entrepreneurs, executives, managers, corporate strategists, economists, IT specialists, IT consultants, engineers, students, researchers, and academicians seeking to improve their understanding of future competitive business practices with the adoption of robotic and information technologies.

Public Administration Evolving: From Foundations to the Future demonstrates how the theory and practice of public administration has evolved since the early decades of the twentieth century. Each chapter approaches the field from a unique perspective and describes the seminal events that have been influential in shaping its evolution. This book presents major trends in theory and practice in the field, provides an overview of its intellectual development, and demonstrates how it has professionalized. The range from modernism to metamodernism is reflected from the

perspective of accomplished scholars in the field, each of whom captures the history, environment, and development of a particular dimension of public administration. Taken together, the chapters leave us with an understanding of where we are today and a grounding for forecasting the future.

Drawing from the latest developments and practices from the field, MANAGEMENT INFORMATION SYSTEMS, 7e provides a clear emphasis on the business and management elements of information technology. The book offers the most current coverage available, including expanded discussions of social networking, IT security, mobile computing, and much more. From overviews of the information age to online business and business intelligence, readers gain a sound balance of the technical and business elements of information technology. In addition, numerous business cases integrated throughout enable readers to apply what they learn to real-world practice--equipping them with skills they can immediately put into action in the business world. This book discusses the impact of information and communication technologies (ICTs) on organizations and on society as a whole. Specifically, it examines how such technologies improve our life and work, making them more inclusive through smart enterprises. The book focuses on how actors understand Industry 4.0 as well as the potential of ICTs to support organizational and societal activities, and how they adopt and adapt these technologies to achieve their goals. Gathering papers from various areas of organizational strategy, such as new business models, competitive strategies

and knowledge management, the book covers a number of topics, including how innovative technologies improve the life of the individuals, organizations, and societies; how social media can drive fundamental business changes, as their innovative nature allows for interactive communication between customers and businesses; and how developing countries can use these technologies in an innovative way. It also explores the impact of organizations on society through sustainable development and social responsibility, and how ICTs use social media networks in the process of value co-creation, addressing these issues from both private and public sector perspectives and on national and international levels, mainly in the context of technology innovations.

This proceedings volume brings together the results of a corporate discussion on research, academic teaching and education in the field of business and economics in the context of globalization. The contributions examine leadership and sustainability, quality and governance and the internationalization of higher education. With a particular focus on business education and business schools, the book discusses the labor market and modernization as well as contemporary trends and challenges. By including both academic papers and contributions from industry, it forges research links between academia, business and industry.

This book analyzes the effects of the latest technological advances in blockchain and artificial intelligence (AI) on business operations and strategies. Adopting an interdisciplinary approach, the contributions examine new developments that change the rules of traditional management. The chapters focus mainly on blockchain technologies and digital business in the "Industry 4.0" context, covering such topics as accounting, digitalization and use of AI in business operations and cybercrime. Intended for academics, blockchain experts, students and practitioners, the book helps business strategists design a path for future opportunities.

Big data, analytics, and artificial intelligence are revolutionizing work, management, and lifestyles and are becoming disruptive technologies for healthcare, e-commerce, and web services. However, many fundamental, technological, and managerial issues for developing and applying intelligent big data analytics in these fields have yet to be addressed. *Managerial Perspectives on Intelligent Big Data Analytics* is a collection of innovative research that discusses the integration and application of artificial intelligence, business intelligence, digital transformation, and intelligent big data analytics from a perspective of computing, service, and management. While highlighting topics including e-commerce, machine learning, and fuzzy logic, this book is ideally designed for students, government officials, data scientists, managers, consultants, analysts, IT specialists, academicians, researchers, and industry professionals in fields that include big data, artificial intelligence, computing, and commerce.

This book discusses digitalization trends and their concrete applications in business and societal contexts. It summarizes new findings from research, teaching and management activities comprising digital transformation, e-business, the representation of

knowledge, human–computer interaction and business optimization. The trends discussed include artificial intelligence, virtual reality, robotics, blockchain, and many more. Professors and researchers who conduct research and teach at the interface between academia and business present the latest advances in their field. The book adopts the philosophy of applied sciences and combines both rigorous research and practical applications. As such, it addresses the needs of both professors and researchers, who are constantly seeking inspiration, and of managers seeking to tap the potential of the latest trends to take their business to the next level. Readers will find answers to pressing questions that arise in their daily work.

This book examines the various ways in which co-production can contribute to the creation, design, and delivery of public services, namely by engaging the expertise of users and their networks, by promoting public services that are better targeted and more responsive to users, by cutting costs against the background of austerity in public finance, by creating a synergy between government and civil society that will impact positively on social capital, and by addressing the challenges resulting from growing democratic and citizenship deficits. Particular attention is paid to local government and the health and social care sector. After definition of the concept of co-production, the critical issues which arise when public services are co-produced are discussed. Various experiences of co-production are presented and analyzed with a view to highlighting why, how, and with what effect public service co-production may be implemented. Individual chapters focus on the impact of co-production in making cities smarter and the use of ICT in supporting co-production of public services. The book will be of relevance to a wide readership, from students to academics and professionals interested or engaged in public service management.

Heavily dominated by the sector of information and communication technologies, economic organizations pursue digital transformation as a differentiating factor and source of competitive advantage. Understanding the challenges of digital transformation is critical to managers to ensure business sustainability. However, there are some problems, such as architecture, security, and reliability, among others, that bring with them the need for studies and investments in this area to avoid significant financial losses. Digital transformation encompasses and challenges many areas, such as business models, organizational structures, human privacy, management, and more, creating a need to investigate the challenges associated with it to create a roadmap for this new digital transformation era. *Digital Transformation and Challenges to Data Security and Privacy* presents the main challenges of digital transformation and the threats it poses to information security and privacy, as well as models that can contribute to solving these challenges in economic organizations. While highlighting topics such as information systems, digital trends, and information governance, this book is ideally intended for managers, data analysts, cybersecurity professionals, IT specialists, practitioners, researchers, academicians, and students working in fields that include digital transformation, information management, information security, information system reliability, business continuity, and data protection.

This book is a product of the need of understanding the new debates from the perspective of business studies. First part includes the topics that define some of the contemporary issues in accounting, as well as demonstrate how accounting practices change to adapt necessities of time. Part II deals with contemporary marketing topics indicating the importance of consumer in today's

business and the necessity of understanding consumers. Finally, the last part of the book, includes writing related to new methods and approaches in operation management and production that gain importance parallel to development in industry.

A thoroughly updated introduction to the current issues and challenges facing managers and administrators in the investor and publicly owned utility industry, this engaging volume addresses management concerns in five sectors of the utility industry: electric power, natural gas, water, wastewater systems and public transit.

For introductory courses in Information Systems or Management Information Systems. Connect essential MIS concepts to everyday life Essentials of MIS is an in-depth look at how today's businesses use information technologies and systems to achieve their corporate objectives. Current real-world business cases illustrate how companies have identified, and ultimately solved, key business challenges using information systems and technologies. Through the use of Essentials of MIS, you will be able to participate in, and even lead, management discussions of information systems for a firm. The 13th Edition consists of 12 chapters with hands-on projects that cover the most essential topics in MIS. In addition to the core text, this edition includes a Video Case Package consisting of 28 video case studies and 10 instructional videos to illustrate business uses of information systems, explain new technologies, and explore concepts. The knowledge and information in this book will be most valuable throughout your business career. Also available with MyLab MIS MyLab(tm) is the teaching and learning platform that empowers you to reach every student. By combining trusted author content with digital tools and a flexible platform, MyLab personalizes the learning experience and improves results for each student. And, with Decision-Making Mini Simulations and Auto-Graded Excel and Access Projects, students learn how MIS concepts will help them succeed in their future careers. This book focuses on the emerging areas of information networking and its applications, presenting the latest innovative research and development techniques from both theoretical and practical perspectives. Today's networks and information systems are evolving rapidly, and there are new trends and applications in information networking, such as wireless sensor networks, ad hoc networks, peer-to-peer systems, vehicular networks, opportunistic networks, grid and cloud computing, pervasive and ubiquitous computing, multimedia systems, security, multi-agent systems, high-speed networks, and web-based systems. However, since these networks need to be capable of managing the increasing number of users, provide support for different services, guarantee the QoS, and optimize the network resources, a number of research issues and challenges have to be considered in order to provide solutions.

These proceedings represent the work of researchers participating in the 11th International Conference on Intellectual Capital,

Knowledge Management & Organisational Learning - ICICKM 2014, which this year is being held at The University of Sydney Business School, The University of Sydney, Australia. The Conference Co-Chairs are Dr John Dumay from Macquarie University, Sydney, Australia and Dr Gary Oliver from the University of Sydney, Australia. The conference will be opened with a keynote by Goran Roos, Advanced Manufacturing Council, Adelaide, Australia who will address the topic of "Intellectual capital in Australia: Economic development in a high cost economy." The second day will be opened with a from James Guthrie, University of Sydney, Australia on the topic of "Intellectual Capital and the Public Sector Research: Past, Present, and Future."

Clients have been identified as critical for building delivery but have been under-researched with only a few studies about them. This book seeks to address this gap. A deeper look into the nature of construction clients and their relation to building users exposes more fundamental questions related to the activity of building and the activity in the building. These fundamental questions include 'How do clients get what they want?', 'How do clients cope with the building process?', and 'How are clients being shaped by building(s)?'. This book on clients and users is structured around three main themes: Agency is concerned with the classical agency/structure dichotomy on actions, roles and responsibilities or, put differently, whether actors can act freely or are bound by structural constraints. Governance is related to the interplay between clients and the supply system: clients govern the supply system but are at the same time governed by the supply system through different processes and mechanisms. Innovation deals with construction innovation and what part clients and users play in this struggle between change and stability. The book includes theoretical and conceptual frameworks on what constitutes clients and users as well as case studies on R&D themes of relevance to practice.

This book constitutes the refereed proceedings of the 13th Joint International Symposium on Artificial Intelligence and Natural Language Processing, iSAI-NLP2017, held in Prachuap Khiri Khan, Thailand, in August 2017, and the 10th International Conference on Knowledge, Information and Creativity Support Systems, KICSS2015, held in Phuket, Thailand, in November 2015. It presents 22 carefully reviewed full papers on the following topics: artificial intelligence; machine learning; decision support systems; data mining; data analysis; natural language processing; multilingual processing; language and ontology unification; text classification; knowledge-based information systems; tracking systems; virtual reality; pattern recognition and image processing; signal classification; object detection and recognition; real-time sensor network; cloud-based services; and information security. One of the most challenging obstacles for many businesses in successfully reaching a global market stems from cultural and language barriers and the lack of a clear understanding of this issue. It is critical for businesses to understand these cultural and language barriers and how to face them through effective communications and cultural sensitivity. The companies that will thrive and see the most success are the ones whose employees communicate and collaborate effectively with customers, suppliers, and partners all over the world. *Breaking Down Language and Cultural Barriers Through Contemporary Global Marketing Strategies* provides both empirical and theoretical research focused on ways that business professionals and organizations are breaking down cultural and language barriers, integrating cultural sensitivity, and implementing cross-cultural management practices into

their daily business practices. Featuring research on topics such as origin effects, consumption culture, and cross-cultural management, managers, consultants, academic researchers, practitioners, business educators, and advanced students in various disciplines will find the content within this publication to be beneficial.

The authors know information systems knowledge is essential for creating competitive firms, managing global corporations & providing useful products & services to customers. One of the central new themes in the revision focuses on helping managers make better decisions about technology to achieve maximum value.

Driven by such tools as big data, cognitive computing, new business models, and the internet of things, the overall demand for innovation is becoming more critical for competitiveness and emerging technologies. These technologies have become real alternatives for the market and offer new perspectives for modern project management applications. The Handbook of Research on Emerging Technologies for Effective Project Management is an essential research publication that proposes innovations for firms and markets through the exploration of project management principles and methods and the effective integration of knowledge and innovation. It encompasses academic and scientific propositions, reviews for conceptual bases, applications of theories in new market solutions, and cases of successful insertion of disruptive technologies and business models in new competitive market offers. Featuring a range of topics such as innovation management, business administration, and marketing, this book is ideal for project managers, IT specialists, software developers, executives, practitioners, managers, marketers, researchers, and industry professionals.

This volume highlights current research and developments on organizations and (their) performance against the background of ubiquitous complexity. It investigates some of the challenges and trends dominating the complex world of nowadays and the ways organizations are dealing with them in their continuous search for performance. The papers in the volume cover a series of hot and/or emerging topics (i.e. sustainable development, corporate social responsibility, green marketing, digital revolution, social media, global trade, intangible assets, economic intelligence and innovation). Built on an interdisciplinary perspective and a multi-level approach?global (trade, power, sustainable development), regional (EU, BRICS), national (country-based systems, cultures, policies, practices), industry (airlines, pharma, luxury, retailing, banking, tourism), local (communities, destinations), and organization (entrepreneurship, MNEs, public organizations: national and local)?the volume uniquely addresses issues of high interest for researchers, practitioners and policymakers.

With the gradual resumption of economic activity, most businesses are facing a range of challenges associated with implementing measures to protect the health and safety of their employees. Some employers had to put certain business activities on hold and even start new ones in order to keep their organizations operating efficiently. The global COVID-19 pandemic plus digital transformation and the pressure of Industry 4.0 have challenged companies to manage their organizations in newfound ways. In the short term, they are facing enormous changes to their business plans; in the long term, they must adapt and continue to progress on their original goals. Reviving Businesses With New Organizational Change Management Strategies is a crucial

reference book that analyzes the sensitivity of organizations to change management based on methodologies and tools to control impacts, to understand how employees will be impacted in their environment, and to learn how technology will help both the industry and professionals. This book also explores types of frameworks that are built for communication and business continuity, the importance of collaborative and interactive relationships for change management, and emotional factors and issues for change management. Covering topics including change management models, cybersecurity, Health 4.0, privacy and security, and information systems management, this text is essential for managers, executives, human resources managers, academicians, students, and researchers looking for successful business strategies that are leading to increased efficiency, performance, and growth.

Directed primarily toward undergraduate CIS/MIS college/university majors, this text also provides practical content to current and aspiring industry professionals.
