This guide examines the production and reception of poetry by a range of women writers--predominantly although not exclusively writing in English--from Sappho through Anne Bradstreet and Emily Bronte to Sylvia Plath, Eavan Boland and Susan Howe. Women's Poetry offers a thoroughgoing thematic study of key texts, poets and issues, analysing commonalities and differences across diverse writers, periods, and forms. The book is alert, throughout, to the diversity of women's poetry. Close readings of selected texts are combined with a discussion of key theories and critical practices, and students are encouraged to think about women's poetry in the light of debates about race, class, ethnicity, sexuality, and regional and national identity. The book opens with a chronology followed by a comprehensive Introduction which outlines various approaches to reading women's poetry. Seven chapters follow, and a Conclusion and section of useful resources close the book.

Several New Age magazines have devoted stories to a burgeoning "Cult of the Goddess." But this cult isn't a result of the women's movement or the product of environmental consciousness - nor is it really new. In fact, the Catholic Church has been making use of a similar cult for two thousand years. In this book, Gerald A. Larue examines the scriptural underpinnings of occult and supernaturalistic notions that survive in contemporary society. The Supernatural, the Occult, and the Bible is based on the author's thorough knowledge of the history of ancient Near-Eastern cultures and their mythology. Larue argues that biblical supernaturalism and modern occultism are two sides of the same coin, and illustrates in fascinating detail how they engender and support each other. He suggests that contemporary religions cannot shirk responsibility for some of the more foolish excesses of occult practice. Larue points out that present-day churchgoers are not as a matter of course made aware of archaeological findings that shed light on scriptural teachings - research into biblical and related languages, literary analyses of biblical texts, and studies of the relationship between concepts found in the Bible and aspects of contemporary occult beliefs and practices - and explains why this is so. The breadth of Larue's research and depth of insight, and his common sense approach, make this book both engrossing and important.

This book is about the role played by microbes in their community mode in sustaining ecosystems. The descriptions given in its chapters indicate clearly that microbial communities are more effective in delivering multifaceted benefits to the soil-plant system than those offered by microbial monocultures in planktonic modes. The role these communities play in a multitude of microbe-microbe and plant-microbe interactions have not yet been fully exploited to gain benefits in this field as well as to achieve sustainability in agriculture practices. Amply discussed are the beneficial characteristics and metabolic capacities of specific microbial groups and the use of microbial traits for the benefit of plant growth. The book suggests the need to develop new microbial technologies to utilize plant-associated microbes for increased crop productivity and agroecosystem balance in order to ensure sustainability. This also provides an effective guidance to scientists, academics, researchers, students and policy makers of the sphere to achieve the above outcomes.

The MGB, the epitome of the British sports car, has attracted a huge following because of its blend of good looks, practicality and decent road manner. During its 18-year production life, from 1962 to 1980, it underwent a bewildering number of changes to specification and equipment. An owner or restorer of an MGB wants to know where their car came in the cycle of production and thus what it should look like and what parts should be fitted, from tail lamps to door handles. Answers to all these questions can only be found in this book, with detailed color photography of the complete range of the cars.

The appearance in 1992 of 'In Search of Ancient Israel' generated a still raging controversy about the historical reality of what biblical scholars call 'Ancient Israel'. But its argument not only takes in the problematic relationship between Iron Age Palestinian archaeology and the biblical 'Israel' but also outlines the processes that created the literature of the Hebrew bible-the ideological matrix, the scribal milieu, and the cultural adoption of a national literary archive as religious scripture as part of the process of creating 'Judaisms'. While challenging the whole spectrum of scholarly consensus about the origins of 'Israel' and its scriptures, it is written more in the style of a textbook for students than a monograph for scholars because, its author believes, it offers an agenda for the next generation of biblical scholars. 'In this reader-friendly polemic, Davies brilliantly addresses an essential issue and at numerous points represents a vanguard in biblical studies' (Robert B. Coote, Interpretation). 'A rich mine of provocative quotations, will provoke considerable opposition and debate, and deserves to be read and reflected on by all biblical scholars' (Keith Whitlam, SOTS Book List).

The light-duty vehicle fleet is expected to undergo substantial technological changes over the next several decades. New powertrain designs, alternative fuels, advanced materials and significant changes to the vehicle body are being driven by increasingly stringent fuel economy and greenhouse gas emission standards. By the end of the next decade, cars and light-duty trucks will be more fuel efficient, weigh less, emit less air pollutants, have more safety features, and will be more expensive to purchase relative to current vehicles. Though the gasoline-powered spark ignition engine will continue to be the dominant powertrain configuration even through 2030, such vehicles will be equipped with advanced technologies, materials, electronics and controls, and aerodynamics. And by 2030, the deployment of alternative methods to propel and fuel vehicles and alternative modes of transportation, including autonomous vehicles, will be well underway. What are these new technologies - how will they work, and will

some technologies be more effective than others? Written to inform The United States Department of Transportation's National Highway Traffic Safety Administration (NHTSA) and Environmental Protection Agency (EPA) Corporate Average Fuel Economy (CAFE) and greenhouse gas (GHG) emission standards, this new report from the National Research Council is a technical evaluation of costs, benefits, and implementation issues of fuel reduction technologies for next-generation light-duty vehicles. Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles estimates the cost, potential efficiency improvements, and barriers to commercial deployment of technologies that might be employed from 2020 to 2030. This report describes these promising technologies and makes recommendations for their inclusion on the list of technologies applicable for the 2017-2025 CAFE standards.
