Truly global in scope and with contributions from leading researchers around the world, The Handbook of Cannabis is the definitive resource on this fascinating drug.

Combining scientific perspectives and clinical applications, it covers a vast array of topics, from why over the centuries cannabis has been used as a medicine, through the regulations facing those wishing to self-administer cannabis or provide cannabis-based medicines, to the chemical structure of its many constituents and the rapidly growing group of synthetic cannabinoids that are currently being used for 'legal highs'. With each chapter written by a group of one or more internationally recognised subject experts, it provides academics and researchers with authoritative scientific material on the main pharmacological actions and their effects, as well as their pharmacokinetics, metabolism, and forensic detection. In addition it also examines the complex morphology, cultivation, harvesting, and processing of cannabis and the ways in which the plant's chemical composition can be controlled. As well as offering a raft of scientific information there is extensive coverage of cannabinoid-based medicines. Helping

readers to identify and evaluate their benefits, chapters explore pharmacological actions and the effects that seem to underlie approved therapeutic uses, how they are currently used to treat certain disorders, and the ever-growing number of wide-ranging potential clinical applications. There is also coverage of both the legal and illegal sources of cannabis, including 'coffee shops' and 'cannabis dispensaries'. The complex issue of 'recreational cannabis' is also tackled. The sought-after and adverse psychological and non-psychological effects are described and discussions are included on how some adverse effects can be lessened by at least one constituent of cannabis, and that it might be possible to reduce the harm that cannabis does to some by changing current regulatory policies. The Handbook of Cannabis is a one-stop reference; essential reading for all clinicians, pharmacologists, psychologists, and psychiatrists interested in this drug, as well as those working in the field of public health.

Were humans created, or did they evolve? This debate continues to rage between science and religion. In *Creation or Evolution?*, author Michael Ebifegah examines these two worldviews within the framework of science.. He examines the constraints of science as an explanatory framework for the origin of species and compares the contemporary world to a hypothetical world under the influence of evolutionary processes and agency. Additionally, he considers the irrelevance of the earths age to the creationist/evolutionist controversy. He stresses that knowledge of the intersection between the origin of life and the origin of species is required to establish the latter.. Ebifegah augments the natural selection discussion in light of Fodor and Piattelli-Palmarinis work and addresses sciences limitations in deploying similarity/dissimilarity arguments in the debate about creationism versus evolutionism. Finally, he focuses on the lack of historical evidence to justify an evolutionary worldview. *Creation or Evolution?* discusses how the M-theory and Charles Darwins paradigm of evolution by natural selection are outside the limits of science. Ebifegah shows that we must

look beyond the inadequacy of such theories and address the validity of science as the sole avenue of inquiry.

The search for a distinct "terrorist profile" has been going on for many years, and while it is generally agreed that nobody is born a terrorist, there is plenty of disagreement about why a person might become one. Whereas personal and situational push and pull factors can be combined to determine how and why young people become involved in terrorism, preventing an individual from following a path that ends in violence without moral restraint poses an enormous challenge, especially in an open society. This book presents papers from the NATO Advanced Research Workshop titled "A Review of the Utility of Existing Terrorism Risk Assessment Instruments and Policies: Is there the Need for Possible New Approaches?", held

in Berlin, Germany, on 29-30 November 2019. Researchers were asked to present papers for discussion sessions with invited participants and practitioners from a number of NATO member and partner countries. Various assessment instruments for identifying problematic individuals at an early stage were presented by experts. It was generally agreed that, due to cultural, religious and other differences, there is no simple way to identify the relatively few high-risk individuals among the larger population of politically radicalized but not necessarily violent individuals who pose no threat. Framed by an Introduction and Conclusion, the 16 chapters in the book are divided into three parts: Theory and Risk/Threat Assessment Instrument Policy Themes; Implementation of Politically Motivated Terrorism Protocols; and Personality Traits/Disorders, Anti-State Terrorism Profiles and the DSM-5 Personality Trait Instrument. This practice-oriented book will be of interest to all those tasked with protecting society from some of its most dangerous members.

The purpose of WNIS 2009, the 2009 International Conference on Wireless Networks and Information Systems, is to bring together researchers, engineers and practitioners interested on information systems and applications in the context of wireless networks and mobile technologies. Information systems and information technology are pervasive in the whole communications field, which is quite vast, encompassing a large number of research topics and applications: from practical issues to the more abstract theoretical aspects of communication; from low level protocols to high-level networking and applications; from wireless networking technologies to mobile information systems; many other topics are included in the scope of WNIS 2009. The WNIS 2009 will be held in Shanghai, China, in December 2009. We cordially invite you to attend the 2009 International Conference on Wireless Networks and Information Systems.

and Information Systems. We are soliciting papers that present recent results, as well as more speculative presentations that discuss research challenges, define new applications, and propose methodologies for evaluating and the road map for achieving the vision of wireless networks and mobile technologies. The WNIS 2009 is co-sponsored by the Institute of Electrical and Electronics Engineers, the IEEE Shanghai Section, the Intelligent Information Technology Application Research Association, Hong Kong and Wuhan Institute of Technology, China. The purpose of the WNIS 2009 is to bring together researchers and practitioners from academia, industry, and government to exchange their research ideas and results and to discuss the state of the art in the areas of the symposium.

In the abstract, training is seen as valuable by most people in business and industry. However, in the rush of providing training programs "on time" and "within budget," evaluation of training is frequently left behind as a "nice to have" addition, if practical. In addition, the training function itself is left with the dilemma of proving its worth to management without a substantive history of evaluation. This book is designed to provide managers, educators, and trainers alike the opportunity to explore the issues and benefits of evaluating business and industry training. The purpose is to motivate more effective decisions for training investments based on information about the value of training in attaining business goals. Without evaluation, the value of specific training efforts cannot be adequately measured, the value of training investments overall cannot be fully

assessed, and the contributions of the training function to the corporation's goals cannot be duly recognized. Articles are grouped into three sections, although many themes appear across sections. The first section establishes the context of training evaluation in a business organization. The second section emphasizes evaluation of training products and services; and the third section discusses costs and benefits of evaluation, and communication and use of evaluation results in decision making. In Section I, the context of training evaluation is established from a variety of perspectives. First, training and training evaluation are discussed in the context of corporate strategic goals.
