

Neurology Journal Authors Instructions

Provides essential information on some 500 journals, with notes on audience, publication frequency, manuscript acceptance rate, and requirements for submissions, as well as mail, phone, and electronic contact information. Journals listed cover the spectrum of topics in nursing and allied health, from advanced nursing and legislation to medical technology and trauma care. Useful for researchers, authors, students, and librarians. Annotation copyrighted by Book News, Inc., Portland, OR

Endoscopic third ventriculostomy is the most widely performed neuroendoscopic procedure around the world. Several scientific papers appear in the scientific literature every month, with an increasing number, given the great interest neuroendoscopy has aroused as well as controversies about certain aspects of endoscopic third ventriculostomy. With this reasoning, the goal of this book is to be a reference in the revision of classic concepts and scientifically proven aspects about the indications and techniques of endoscopic third ventriculostomy, as well as new neuroendoscopic tendencies. The book is structured in 2 parts and into 7 chapters. Part I – Classic Concepts – comprises the first 2 chapters, covering general aspects of neuroendoscopy such as historical notes, endoscopic anatomy and ventricular system physiology. Part II – State-of-the-Art – comprises chapters 3 to 7. From chapters 3 to 6 the book will discuss general principles of endoscopic ventricular technique and the applications of endoscopic third ventriculostomy in different age groups, and its association to choroid plexus coagulation. Chapter 7 deals with alternative ways of communicating the ventricular system with the cisterns of the subarachnoid space. All chapters are richly illustrated with high

Get Free Neurology Journal Authors Instructions

resolution images; there are links to online access to demonstrative surgical videos. Designed for neurosurgeons at every level, the book will be unique in the market, as there is no similar book in the current scientific literature that specifically discusses endoscopic third ventriculostomy in its broadest sense.

Proud of being a Neurologist? Then grab this Journal! This journal/notebook is a Perfect Neurologist Gifts - Personal Booklet for Your Neurologist - Great Gift to convey gratitude for your Neurologist- Perfect For a Neurologist Book Specifics: This Awesome Personal Journal/Notebook is 110-page Blank Lined Writing Journal for Neurologists. It Makes an Excellent Gift for them. (6 x 9 Inches / Glossy Finish) Advantages of Writing Journals: Studies have shown that writing journals can boost your creativity and enhance your memory and do your intelligence a world of good. It lets your creative juices flowing and you can brainstorm innumerable ideas in no time not only improve your discipline but can also improve your productivity. Many successful players journal daily. Next time you fall short of this journal will help you reminding them at the tip of your fingers. You can use this journal as: Personal Lecture and class notes journal Medical Examination preparation journal List of standard operating procedure journal Practice journal observation journal Logbook diary and many more Other Uses of Writing Journals: Other uses of this cute notebook come journal can be simply writing down positive thoughts and affirmations, or your listing down in the night before going to bed, the things to be done the next day. You can then read out these instructions after getting up and your day is all set to goal-driven mode. Hit the BUY NOW Button and start your Magical Journey today! All the Best! *** Please Check out other Journals by clicking the Author This Personal Journal Gift for writing, for daughter, for mom, for girl, for women, for author

learn, for books read, for men... is perfect for anyone who is writing somethings or loves someone who is. This way to make someone feel special, will help them see how much you care. Document Properties: dimension: 6" x 9". size: 110 page notebook. Type: Paperback. This notebook is the perfect place to write your dreams, your bucket list, your hopes, your successes, Collect Memories, the things you laugh about, and a great place to write about your Feelings & Thoughts. It can also be used to keep track of Creating To-Do Lists, Creative Writing or Keeping Track Of Your Schedul and aslo for Education,

This book is for the clinician who wants to write. It is for the physician, physician assistant, or nurse practitioner who sees patients and who wants to contribute to the medical literature. You may be an assistant professor aspiring to promotion or a clinician in private practice who seeks the personal enrichment that writing can bring. If you are new to medical writing or even if you have been the author of some articles or book chapters and seek to improve your abilities, this book can help you. Who am I that I can make this assertion and write this book, both fairly presumptuous? Here's my reasoning. As a practicing physician, writing has been my avocation; unlike the authors of many other writing books, I am not a journal editor. Over 14 years in private practice and 26 years in academic medicine, I have written all the major models described in this book: review articles, case reports, editorials, letters to the editor, book reviews, book chapters, edited books, authored books, and reports of clinical research studies. Most have been

Get Free Neurology Journal Authors Instructions

published. Not all. Perhaps my most significant qualification is not that I have managed to produce a lengthy curriculum vitae. In my opinion, what is more important for you, the reader, is that I have made all the errors. That's right, the mistakes.

Discover how to use the Internet to locate primary sources for medical information. This focused guide zeros in on the most valuable sites and techniques for staying up-to-date on medical issues, grasping new technologies, and enhancing medical practice. Companion CD software Data.zip (1MB) Demos.zip (2.1MB) Resource.zip (1.4MB)

Affecting 4 percent of children and 1-2 percent of the general population, epilepsy is one of the most common neurological disorders. The 1st edition of this guide proved to be the only one of its kind, covering many important aspects of diagnosis and treatment. Due to the continued advances being made in the subject, and building on the sell-out success of the 1st edition this thorough revision reflects the latest report of the ILAE classification core group and the significant progress made in the diagnosis, classification and treatment of the epilepsies.

Manuscript instructions for 246 English-language biomedical journals.

Miscellaneous appendixes, including uniform requirements set up by a committee

of editors in 1978.

Let the Author's Handbook of Styles for Life Science Journals save you time and trouble by providing a one-stop resource for all your manuscript writing requirements. No more plowing through your journal collection or wandering the library stacks to get those elusive journal pages containing instructions to authors. This unique book contains all the information you need to know: whether the journal will consider your manuscript; the journal's submission address; how to construct the abstract, illustrations, tables, and references; and specific information on copyright, multiple authorship, statistical analyses, and page charges. The Author's Handbook of Styles for Life Science Journals gives all this information for 440 of the most important English-language, life science journals. Titles were selected from the "Journal Rankings by Times Cited" list in the Science Citation Index Journal Citation Report. Because this report is heavily weighted toward the medical sciences, other life science journals are incorporated into the book based on general level of prestige and reputation. In addition, some new titles that promise to be important to their fields, like Nature Medicine and Emerging Infectious Diseases are also included. Organized by journal title, the handbook's entries are uniformly arranged to allow direct comparison between journals. Information is presented in an easy-to-use, easy-to-read format with clear and explicitly stated instructions. The Author's Handbook of Styles for Life Science Journals gives authors in the life sciences all the information necessary for the correct and complete compilation of a manuscript for submission to their journal of choice.

With the second edition of The Whiplash Encyclopedia, Robert Ferrari revisits the notion that whiplash is an example of illness induced by society, in general, and by physicians in

Get Free Neurology Journal Authors Instructions

particular. The second edition takes the work out of understanding all the different dimensions of whiplash, be it why some people get chronic neck pain and others do not, what causes jaw pain, what therapies work and which do not, how we can understand the effect that psychosocial factors have on recovery, what effect litigation and insurance systems have on recovery, and many other topics. The Whiplash Encyclopedia leaves no topic on whiplash uncovered, and can be used in any medicolegal practice. The next time you have a question about whiplash, the answer is likely to be found in The Whiplash Encyclopedia. The Whiplash Encyclopedia, Second Edition explores new theories being heralded to explain chronic whiplash; discusses Central Sensitization; and includes a new chapter in whiplash mythology. In addition, it expands on the knowledge of what causes (and what does not cause) the many neurological and cognitive symptoms reported by whiplash patients. The second edition also investigates the Whiplash Cultures and countries where chronic whiplash is epidemic and examines those cultures by laying them next to countries that, despite having motor vehicle collisions as frequently as elsewhere in the world, and frequently having physicians diagnose acute whiplash, rarely or uncommonly has anyone taking the stage as chronic whiplash characters.

The first edition of this book (titled “The Clinician’s Guide to Medical Writing”) has become a standard in its field and remains an indispensable reference for any clinician, academic physician, or health professional who wishes to hone their writing skills. However, since its publication in 2004, significant changes have taken place in the way medical professionals communicate with each other and the world. Medical Writing: A Guide for Clinicians and Academicians, 2e retains all of the fundamental writing advice of the first edition and has been

neurotology, manifested by the clinical experiences and research-publication work of otolaryngologists, neurologists, neuro-ophtalmologists, audiologists and physiotherapists. As a result, this will be a completely state-of-the-art work that includes all up-to-date neurophysiological data related to the vestibular system. It has been estimated that 10% of patients that present at an emergency clinic have vestibular disorders, including vertigo, and these disorders are frequently a cause of falls in elderly patients. On the other hand, many physicians treat their patients with vertigo with vestibular blockers, which treat the symptoms but do not cure the disorders. We feel that it is important to supply a source of information on the vestibular system and balance disorders, and this title will do that in a comprehensive manner. This title will be an ideal reference for the diagnosis and treatment of vestibular disorders for otolaryngologists, neurologists, neuro-ophtalmologists, audiologists and physical therapists.

Manuscript instructions for over 420 worldwide biomedical journals. Arranged alphabetically by journal titles. Broad subject indexes of journals of the United States and Canada and of foreign countries.

Handbook of Clinical Neurology: Volume 95 is the first of over 90 volumes of the handbook to be entirely devoted to the history of neurology. The book is a collection of historical materials from different neurology professionals. The book is divided into 6 sections and composed of 55 chapters organized around different aspects of the history

of neurology. The first section presents the beginnings of neurology: ancient trepanation, its birth in Mesopotamia, ancient Egypt; the emergence of neurology in the biblical text and the Talmud; neurology in the Greco-Roman world and the period following Galen; neurological conditions in the European Middle Ages; and the development of neurology in the 17th and 18th centuries. The second section narrates the birth of localization theory; the beginning of neurology and histological applications, neuroanatomy, neurophysiology, surgical neurology and other anatomo-clinical methods. The third section covers further development of the discipline, including methods of neurological illustration and hospitals in neurology and neurosurgery. This section also narrates the history of child neurology, neurodisability and neuroendocrinology. It also features the application of molecular biology on clinical neurology. The fourth section describes the dysfunctions of the nervous system and their history. The fifth and last section covers the regional landmarks of neurology and the different treatments and recovery. The text is informative and useful for neuroscience or neurology professional, researchers, clinical practitioners, mental health experts, psychiatrists, and academic students and scholars in neurology. * A comprehensive accounting of historical developments and modern day advancements in the field of neurology * State-of-the-art information on topics including brain damage and dysfunctions of the nervous system * New treatments and recovery methods from redundancy to vicariation and neural transplantation, amongst others

A classic text since it was first published in 1974, the Lippincott Manual for Nursing Practice (LMNP) has provided essential nursing knowledge and up-to-date information on patient care for nearly 40 years. Now in its 10th edition, this full-color text continues to serve as the most comprehensive reference for practicing nurses and nursing students worldwide. Often referred as the 'Lippincott Manual' or simply the 'Lippincott', the LMNP is widely used as a procedure manual for many healthcare institutions (contains 157 Nursing Procedure Guidelines). It is also widely regarded as the Gold Standard for nursing practice in the classroom. Organized into five major parts, LMNP presents a comprehensive reference for all types of core nursing care. Part 1: Nursing Process & Practice; Part 2: Medical-Surgical Nursing; Part 3: Maternity & Neonatal Nursing; Part 4: Pediatric Nursing; Part 5: Psychiatric Nursing. Content is evidence-based with supporting articles highlighted in actual entries and procedure guidelines. Official Guidelines that shape practice are incorporated in to the content and include those from the National Institutes of Health, American Diabetes Association, American Heart Association, American Nurses Association, Joint Commission, AWHONN, and others. A companion Website includes full text, an image bank, and drug-related NCLEX®-style questions, FDA updates, and new clinical studies.

“You are about to start on a great adventure. You are going to transition from reading

Get Free Neurology Journal Authors Instructions

about science to becoming a scientist.” -From the Preface Using engaging, disarming prose, author Mary Harrington shows neuroscience students how to go about selecting a topic, designing an experiment, analyzing the results, and publishing a paper. This text effectively illustrates basic research methods and design principles by uniquely using relevant examples from neuroscience such as the principles of design of fMRI studies, the use of transgenic mice, and conditional gene knockouts. The author also addresses basic professional ethics, fundamental statistics and data analysis tools, the range of possible experimental designs (from simple descriptive studies to multifactorial designs), and ways to control unwanted variables and avoid common pitfalls. This text is intended as either a core or supplemental text for both undergraduates and graduate students studying research methods in Neuroscience, Neuroanatomy, Neurophysiology, Neurochemistry, or Biological Psychology.
