This book covers game-theoretic approaches to analyzing policies for environmental regulation in the power sector. The scope includes operational and investment decisions in imperfectly competitive electricity markets as well as transmission planning and policy design. Given this context, this book synthesizes equilibrium and bi-level modeling to address challenging research questions such as:

- How are power-plant operations affected by carbon policy, such as cap-and-trade (C&T) systems?
- How does market power in electricity generation affect market outcomes and CO2 emissions?
- How does a strategic firm with first-mover advantage manipulate both electricity and C&T permit prices?
- How does a strategic firm with first-mover advantage invest in new generation capacity under a C&T system?
- How does sustainable transmission planning adapt to an imperfectly competitive power sector?
- How should a renewable portfolio standard (RPS) target be revised in an imperfectly competitive power sector?

This book includes plenty of illustrative examples to facilitate the concepts' comprehension. It is intended to make equilibrium and bi-level models adapted for policy assessment accessible to graduate students, academic researchers, industry practitioners, and policy analysts.

Aquatic ecosystems are rich in biodiversity and home to a diverse array of species and habitats, providing a wide variety of benefits to human beings. Many of these valuable ecosystems are at risk of being irreversibly damaged by human activities and pressures, including pollution, contamination, invasive species, overfishing and climate change. Such pressures threaten the sustainability of these ecosystems, their provision of ecosystem services and ultimately human well-being. Ecosystem-based management (EBM) is now widely considered the most promising paradigm for balancing sustainable development and biodiversity protection, and various international strategies and conventions have championed the EBM cause and the inclusion of

Função social do notariado ? eficiência, confiança e imparcialidade, de Celso Fernandes Campilongo revela aspectos intrínsecos à atividade notarial que não costumam ser objeto de estudo. O texto traz uma consistente abordagem histórica, social e econômica e as razões determinadas pela Constituição Federal de 1988 que justificam e legitimam a existência do notário; além disso, ressalta a importância da atividade notarial numa economia moderna e dinâmica. O fato de ser um ofício bastante antigo faz com que alguns observadores ignorem o potencial, a relevância e a atualidade da função.
