Beloved Companions, Kindred Spirits Karlene Stange's spiritual journey began as she drove her pickup loaded with medical supplies to attend to animals throughout southwestern Colorado, where the Animas River carves the landscape. As an ambulatory veterinarian, she has experienced the challenges, sorrows, and joys of working with creatures great and small and feels a powerful kinship with these beautiful beings, a bond that goes beyond flesh and fur and feathers. The Spiritual Nature of Animals chronicles her amazing exploration through the teachings of various religious and cultural traditions, as well as her encounters with the magnificent Rocky Mountain terrain and the quirky characters — both animal and human — who inhabit it.

Animals are everywhere in our lives. We follow them into the wild, we invite them into our homes, they inhabit our dreams, mythologies, folklores, and popular cultures. What is this powerful bond? Why are we so fascinated with animals of every kind? And why has our relationship with them always been riddled with such complexity and contradiction? A Walk in the Animal Kingdom explores the world of animals with the inquisitiveness, depth, and gentle humor that readers across the globe have come to expect from the acclaimed author-artist team of Jerry Dennis and Glenn Wolff. The book is an inquiry into animals of the world, their astonishing diversity and abundance; their mating habits, defensive strategies, and other behaviors; their extraordinary senses of sight, hearing, and smell. It is also an exploration of our profound connection with them, from the joys they inspire and the fears they arouse, to their prominence in our lives as pets, team mascots, and embodiments of wild nature—and the paradox that allows us to battle to protect certain species while ignoring others that are disappearing at a rate perhaps unequaled in the history of our planet. Like the previous collaborations of Dennis and Wolff, A Walk in the Animal Kingdom is certain to become a classic among books about nature—its wonders, its complexities, and our place in it.

We not only share nearly 99% of our genes with chimps, we also have some 35% in common with daffodils. Throughout much of the animal and even plant kingdoms, almost the same ancient genes code for almost the same proteins. And further, to everyone's astonishment, the genes involved in making the complex eyes of fruitflies are close matches to those involved in making the very different eyes of octopuses and people. So what leads to the nature's 'endless forms most beautiful'? The key to this mystery is being unravelled by 'Evo Devo' or the new science of evolutionary development biology. By looking at how a single-celled egg gives rise to a complex, multi-billion celled animal, Evo Devo is illuminating exactly how new species - butterflies and zebras, trilobites and dinosaurs, apes and humans - are made and evolved. The key, it turns out, is all about location and timing... For anyone who has ever pondered 'where did I come from', Endless Forms Most Beautiful explores our history, both the journey we have all made from egg to adult, and the long trek from the origin of life to the very recent origin of our species.

Should we attempt to understand (macro-)evolutionary biology, in the twenty-first century, as secular or sacred? This book will attempt to answer this question by exploring the secular evolutionary worldview, the author's view of kenotic-causation, Whitehead's views on chance, Derrida's views on non-human animals, a statement upon the God of chance and purpose, Augustine's various theologies of creation, a decidedly non-dualistic (macro-)evolution, a provocative thesis regarding evolutionary Christology, the connection between kenosis and emergence, and an explication of both Anders Nygren and Thomas Jay Oord's views of love in the contemporary environ. It also develops the author's personal view regarding necessary, kenotically-donated, and self-giving love, and argues that kenosis and emergence can add to the discussion of understanding the theology-science-love symbiosis. It advocates and explicates herein a monistic process-based view of the overlapping relationship between theology and science.
