The basis for a major documentary, two leading experts sound an urgent call for the radical reimagining of American education so we can equip students for the realities of the twenty-first-century economy. We prize academic achievement, pressuring our children to get into the "right" colleges, have the highest GPAs, and pursue advanced degrees. But while students may graduate with credentials, by and large they lack the competencies needed to be thoughtful, engaged citizens and to get good jobs in our rapidly evolving economy. Alarming, our methods of schooling crush the creativity and initiative young people really need to thrive in the twenty-first century. Now bestselling author and education expert Tony Wagner and venture capitalist Ted Dintersmith call for a complete overhaul of American schools, sharing insights and stories from the front lines. Their powerful, urgent message identifies the growing gap between credentials and competence--and offers a framework for change. *Most Likely to Succeed* presents a new vision of American education, one that puts wonder, creativity, and initiative at the very heart of the learning process and prepares students for today's economy. Covers the important concepts, methodologies, technologies, applications, social issues, and emerging trends in this field. Provides researchers, managers, and other professionals with the knowledge and tools they need to properly understand the role of end-user computing in the modern organization.

The strategies reflect the assessment Standards benchmarks established by the NCTM. In addition, an entire chapter is devoted to help teachers use these assessments to arrive at their students' grades.

The childhood obesity epidemic and related health consequences are urgent public health problems. Approximately one-third of America's young people are overweight or obese. Health problems once seen overwhelmingly in adults, such as type 2 diabetes, cardiovascular disease, and hypertension, are increasingly appearing in youth. Though the health of Americans has improved in many broad areas for decades, increases in obesity could erode these and future improvements. The IOM report *Accelerating Progress in Obesity Prevention: Solving the Weight of the Nation* recognized the importance of the school environment in addressing the epidemic and recommended making schools a focal point for obesity prevention. The development and implementation of K-12 nutrition benchmarks, guides, or standards (for a discussion of these terms, see the next section of this chapter) would constitute a critical step in achieving this recommendation. National nutrition education curriculum standards could have a variety of benefits, including the following: Improving the consistency and effectiveness of nutrition education in schools; Preparing and training teachers and other education staff to help them provide effective nutrition education; Assisting colleges and universities in the development of courses in nutrition as part of teacher certification and in updating methods courses on how to integrate nutrition education in subject-matter areas in the classroom and in materials; and Establishing a framework for future collaborative efforts and partnerships to improve nutrition education. *Nutrition Education in the K-12 Curriculum: The Role of National Standards* is a summary of the workshop's presentations and discussions prepared from the workshop transcript and slides. This summary presents recommendations made by individual speakers.
