Family doctors, pediatricians and other professionals who deal with children are regularly consulted because of febrile children. During the past few years remarkable advances on this subject of fever have been made. Among others, this book covers: - Different types of fever with possible complications, - Hyperthermia and their management, - Management of fever with guidelines on antipyretics and their side effects, - Complimentary medicine and fever, - Differential diagnosis of fever, with problem-setting and solving as a case presentation. This reader-friendly reference on the disorders of body temperature in children covers the entire spectrum of subjects related to fever. It gives an overview of the best treatment options in order to achieve the best results.

At a time when Europeans across the continent are focused on the EU's future direction, this book provides an important contribution to the current debate. Created for reasons quite unconnected with the environment, the EU has been given a compelling new justification by the success of its environmental policy. A number of factors – including a number of threats that came to prominence in the 1980s, and the new concept of 'sustainable development' – are responsible for pushing environmental policy to the forefront of its agenda. Nigel Haigh, a leading authority on the development and implementation of EU environmental policy, traces its evolution from obscurity to centrality. Drawing on a range of articles and lectures, he demonstrates how the EU has not only adapted itself to take on entirely new subject matter, but also has contributed to solving problems which individual Member States could not have dealt with on their own. The book goes on to contextualise the issues throughout its history and offers insight into the future role of the EU in environmental matters. This book is a valuable resource for academics and scholars as well as professionals and policy makers in the areas of environment and sustainability, politics, international relations and European affairs.

This book is about the basis of mathematical reasoning both in pure mathematics itself (particularly algebra and topology) and in computer science (how and what it means to prove correctness of programs). It contains original material and original developments of standard material, so it is also for professional researchers, but as it deliberately transcends disciplinary boundaries and challenges many established attitudes to the foundations of mathematics, the reader is expected to be open minded about these things. "MASK is the first detailed account of MI5's penetration of the CPGB and the Burgess, Maclean, Philby, Blunt and Cairncross network. It also reveals the role of a hitherto unknown spymaster, Bob Stewart, who controlled the Cambridge Five."--BOOK JACKET.

Denise Barnes was seven years old when she first realised she had a gift for selling. After a stellar career building her own business from the ground up Denise finally decided the time was ripe to enjoy her success and made plans to hand on her prospering company. But instead of settling her comfortably into an early retirement the decision to sell up plunged her into a nightmare spanning three years. Enter two charming gentlemen who sweet-talked Denise into signing everything over before miring her in legal battles ignoring financial obligations and causing her tens of thousands of pounds of unforeseen costs. Seller Beware tells with unsparing honesty Denise's horrifying yet often humorous story illustrating the myriad pitfalls involved in selling a business. With the gift of hindsight Denise reflects on how she would have handled things differently had she known the risks - and offers advice to others worried about being taken for a ride in commercial transactions. This illuminating and accessible book is not only a layman's guide on how not to sell your business but also a truly gripping tale of one woman's road to ruin.

New Scientist magazine was launched in 1956 "for all those men and women who are interested in scientific discovery, and in its industrial, commercial and social consequences". The brand's mission is no different today - for its consumers, New Scientist reports, explores and interprets the results of human endeavour set in the context of society and culture.

Climate change is affecting the Arctic environment and ecosystems at an accelerating speed, twice the rate of the global average. This is opening the Arctic to transportation and resource development and creating serious challenges for local communities and indigenous peoples. Climate Governance in the Arctic considers two aspects of climate change from an institutional perspective. It focuses on how relevant regimes, institutions and governance systems support mitigation of climate change. It also examines the extent to which the varying governance arrangements in the Arctic support adaptation and the development of adaptation processes for the region. The book's focus on Arctic governance offers unique insights within climate change mitigation and adaptation research.

Strategic Management for Tourism, Hospitality and Events is the must-have text for students approaching this subject for the first time. It introduces students to fundamental strategic management principles in a Tourism, Hospitality and Events context and brings theory to life by integrating a host of industry-based case studies and examples throughout.
