A concise study and reference guide for SL & HL IB Physics. The guide helps to explain all the tricky formulae and when to use them, provides easily understandable definitions for every word and law in the syllabus and gives step-by-step instructions for useful derivations. Use it for quizzing yourself and others, as an aid while doing tests and exams, or simply as a 'here-to-help' formulae book. This guide covers the entire SL & HL syllabi and has been revised in line with suggestions and improvements from IB students taught by Tim. Tim scored 44 points in the IB in 2005, and after completing an MEng at Oxford University, now runs Elite IB (www.eliteib.co.uk), a tutoring agency catering for IB students around the world providing all forms of tuition and university entrance assistance.

An authorised reissue of the long out of print classic textbook, Advanced Calculus by the late Dr Lynn Loomis and Dr Shlomo Sternberg both of Harvard University has been a revered but hard to find textbook for the advanced calculus course for decades. This book is based on an honors course in advanced calculus that the authors gave in the 1960's. The foundational material, presented in the unstarred sections of Chapters 1 through 11, was normally covered, but different applications of this basic material were stressed from year to year, and the book therefore contains more material than was covered in any one year. It can accordingly be used (with omissions) as a text for a year's course in advanced calculus, or as a text for a three-semester introduction to analysis. The prerequisites are a good grounding in the calculus of one variable from a mathematically rigorous point of view, together with some acquaintance with linear algebra. The reader should be familiar with limit and continuity type arguments and have a certain amount of mathematical sophistication. As possible introductory texts, we mention Differential and Integral Calculus by R Courant, Calculus by T Apostol, Calculus by M Spivak, and Pure Mathematics by G Hardy. The reader should also have some experience with partial derivatives. In overall plan the book divides roughly into a first half which develops the calculus (principally the differential calculus) in the setting of normed vector spaces, and a second half which deals with the calculus of differentiable manifolds.

This concise guide provides the content needed for the Chemistry IB diploma at both Standard and Higher Level. It follows the structure of the IB Programme exactly and includes all the options. Each topic is presented on its own page for clarity, Higher Level material is clearly indicated, and there are plenty of practice questions. The text is written with an awareness that English might not be the reader's first language

Robin Law represents the best of the generation that emerged during one of the most eventful and exciting periods in African history and historiography. This book offers an assessment of his scholarship, most notably as an historian of Africa his work in pre-colonial West African history, his methodological approaches to African history; his scholarship on transatlantic slavery in particular; and his work on diasporic topics and the study of changing identities produced by Atlantic slavery. The book supplies an ongoing dialogue with the *¿waves¿* of scholarship stimulated by the work of Robin Law, by a remarkable cast of scholars who occupy the leading role in their areas of specialization.
