Inhaltsangabe:Abstract: More and more companies apply electronic information systems in all their business areas. In the past, many of these systems pertained to one specific user group. However, due to high efforts and investments for maintaining these information flows, companies tend to increase the amount of attracted user groups. Thereby, the users must deal with more and more information every day. In addition, they must select the relevant information, which serves as a basis for their decisions, on their own. This procedure and the included irrelevant information generate high efforts due to re-work requirements. Therefore, users reject more and more information. All these conditions combined with a two-user group-oriented customer information system require output adjustments to the user-specific needs. Consequently, it is necessary to identify the users, their needs, and the potential effectiveness of specific information provided by a specific system. This thesis refers to theoretical analysis models for generating an optimal concept. Thereby, it considers methods analyzing the original information system aim, user groups, their needs and the way the provided information flow can meet all these requests. These considerations represent actual conditions of Varta Gerätebatterie GmbH. Afterwards, this research compares the optimal with the actual situation in order to deduct appropriate improvement steps. Finally, this thesis suggests possible integrations and constitutes the related advantages and disadvantages based on cost accounting and information management theory. The information flow analysis demonstrates the importance of finding appropriate methods and the key role of defining all users. Moreover, it emphasizes the significance of adjusting this flow to user needs in regular intervals due to the rapidly changing environment. The analysis of the information preparation and output indicates that communication plays a key role in exchanging information. The analysis of the optimal and the actual information system display several gaps, which VARTA should close. The actual situation analysis includes company conditions. Therefore, it is valid for practical implementation. These gaps pertain to the improvement procedure as well as to completely new integration issues. Global production and purchasing operations create a platform for entry into new markets. However, it takes considerable effort to plan and implement a sustainable globalization strategy; this book will help in that task. The wealth of experience and analysis featured in this book is the result of an extensive survey among leading manufacturing companies as well as countless discussions with executives who have personally wrestled with the issues of "going global." The book treats the whole range of management challenges. In breadth and depth, the insights it offers surpass what a manager or most individual companies could acquire on their own.

This book contains revised papers from the 17th International Conference on Enterprise Information Systems, ICEIS 2015, held in Barcelona, Spain, in April 2015. The 31 papers presented in this volume were carefully reviewed and selected from a total of 327 submissions. The book also contains one full-paper invited talk. The selected papers reflect state-of-the-art research that is oriented toward real-world applications and highlight the benefits of information systems and technology for industry and services. They are organized in topical sections on databases and information systems integration, artificial intelligence and decision support

These proceedings highlight research on the latest trends and methods in experimental and behavioral economics. Featuring contributions presented at the 2017 Computational Methods in Experimental Economics (CMEE) conference, which was held in Lublin, Poland, it merges findings from various domains to present deep insights into topics such as game theory, decision theory, cognitive neuroscience and artificial intelligence. The fields of experimental economics and behavioral economics are rapidly evolving. Modern applications of experimental economics require the integration of know-how from disciplines including economics, computer science, psychology and neuroscience. The use of computer technology enhances researchers' ability to generate and analyze large amounts of data, allowing them to use non-standard methods of data logging for experiments such as cognitive neuronal methods. Experiments are currently being conducted with software that, on the one hand, provides interaction with the people involved in experiments, and on the other helps to accurately record their responses. The goal of the CMEE conference and the papers presented here is to provide the scientific community with essential research on and applications of computer methods in experimental economics. Combining theories, methods and regional case studies, the book offers a valuable resource for all researchers, scholars and policymakers in the areas of experimental and behavioral economics.
