How groups of people, from various educational settings worldwide, conduct research together is the subject of this book. Rather than wait for top- down policy changes in education, many practitioners are conducting research in order to implement reform from the bottom-up, the aim of this research being to progress action necessary for

educational reform. The authors look at different aspects and the impact of action research on educational reform around the world, including: how do geography and philosophy affect differences on this work worldwide?; what is the political nature of groups currently taking action to improve education?; and what are the tensions between personal and instructional changes that come from participating in action research? The text also considers the effects of action research on changes in the professions including education, social work, nursing and management.

"Ford Motor Company would not have survived the competition had it not been for an emphasis on results. We must view education the same way," the U.S. Secretary of Education declared in 2003. But is he right? In this provocative new book, Larry Cuban takes aim at the alluring cliché that schools should be more businesslike, and shows that in its long history in business-minded America, no one has shown that a business model can be successfully applied to education. In this straight-talking book, one of the most distinguished scholars in education charts the Gilded Age beginnings of the influential view that American schools should be organized to meet the needs of American businesses, and run according to principles of cost-efficiency, bottom-line thinking, and customer satisfaction. Not only are schools by their nature not businesslike, Cuban argues, but the attempt to run them

along business lines leads to dangerous over-standardization--of tests, and of goals for our children. Why should we think that there is such a thing as one best school? Is "college for all" achievable--or even desirable? Even if it were possible, do we really want schools to operate as bootcamps for a workforce? Cuban suggests that the best business-inspired improvement for American education would be more consistent and sustained on-the-job worker training, tailored for the job to be done, and business leaders' encouragement--and adoption--of an ethic of civic engagement and public service.

Both educators and their students are involved in the process of assessment – all parties are expected to meet and exceed expectations in the face of competing conditions. New practices are being developed to enhance students' participation, especially in their own assessment, be it through peer-review, reflective assessment, the introduction of new technologies, or other novel solutions. Though widely researched, few have measured these innovations' effectiveness in terms of satisfaction, perceived learning, or performance improvements. Innovative Practices for Higher Education Assessment and Measurement bridges the gap between political discourse, theoretical approach, and teaching practices in terms of assessment in higher education. Bringing new insights and presenting novel strategies, this publication brings forth a new perception of the importance of assessment and offers a set of successful, innovative practices. This book is ideal for educators, administrators, policy makers, and students of education.

The first guide of its kind written specifically for trainee and newly qualified teachers, this standards-based text explores the needs of dyslexic learners in mainstream secondary schools. In light of the current dyslexia-friendly schools initiative, it looks at organisational-level support for dyslexic children, together with pragmatic strategies which teachers can use to support children's cross-curricular learning. Further, it includes case studies and practical tasks to build readers' confidence in supporting Specific Learning Difficulties, as well as a range of coping strategies and practical advice, based upon the authors' experience of working with dyslexic learners in different contexts over many years.

This textbook on assessment and outcome measurement is written for both occupational therapy and physiotherapy students and qualified therapists. It begins by defining what is meant by assessment, outcome, evaluation and measurement and discussing the complexity of therapy assessment and measurement, including the challenge of measuring human behaviour and the impact of factors such as task demand and context, including the environment.

Methods of data collection (e.g. observation, interview, standardised testing) and sources (e.g. self-report, proxy) for collecting information about clients are then reviewed, and the main purposes of assessment (e.g. descriptive, evaluative, predictive, discriminative) presented. The book then addresses the topics of standardisation, levels of measurement, reliability, validity and clinical utility. There is a chapter describing and applying models for categorizing levels of function to aid assessment and measurement. The concept of clinical reasoning and reflective practice is then explored. Application of principles is supported through detailed case studies and worksheets and the criteria for test critique and guidelines for choosing a particular assessment approach are discussed.

The papers from the first two International Study Association on Teachers and Teaching conferences are presented in this title as book chapters. Each paper has historical value, marking as they do, both a change in topic focus and a revolution in research practice. They also have a practical value in that they provide a large reference source for, and a wide range of examples of, both topics and methods of research. Value for the future can be found in the texts that note lacunae in research and unresolved issues. Further, since the chapters derive from research conducted in a variety of national contexts, revealing some evidence of common constraints and opportunities impinging on education at the time, questions are stimulated about what has changed and what has stayed the same in the interim. This volume is a unique contribution to the study of language policy and education for English Learners because it focuses on the decade long implementation of “English Only” in Arizona. How this policy influences teacher preparation and classroom practice is the central topic of this volume. Scholars and researchers present their latest findings and

concerns regarding the impact that a restrictive language policy has on critical areas for English Learners and diverse students. If a student's language is sanctioned, do they feel welcome in the classroom? If teachers are only taught about subtractive language policy, will they be able to be tolerant of linguistic diversity in their classrooms? The implications of the chapters suggest that Arizona's version of Structured English Immersion may actually limit English Learners' access to English.

Sponsored by Division 15 of APA, the second edition of this groundbreaking book has been expanded to 41 chapters that provide unparalleled coverage of this far-ranging field. Internationally recognized scholars contribute up-to-date reviews and critical syntheses of the following areas: foundations and the future of educational psychology, learners' development, individual differences, cognition, motivation, content area teaching, socio-cultural perspectives on teaching and learning, teachers and teaching, instructional design, teacher assessment, and modern perspectives on research methodologies, data, and data analysis. New chapters cover topics such as adult development, self-regulation, changes in knowledge and beliefs, and writing. Expanded treatment has been given to cognition, motivation, and new methodologies for gathering and analyzing data. The Handbook of Educational Psychology, Second Edition provides an indispensable reference volume for scholars, teacher educators, in-service practitioners, policy makers and the academic libraries serving these audiences. It is also appropriate for graduate level courses devoted to the study of educational psychology.
