Dialogue editing is a crucial yet invisible part of filmmaking. Do it right, and no one notices. Do it wrong, and your film or video sounds messy, distracting, and unrealistic. This is a book for people who need to edit production sound for film, TV, or video but were never taught how to do it. It goes step by step through the process and covers all the workflows you are likely to encounter. Efficient working practices are emphasized throughout, so you learn to save time and avoid needless repetition. Many dialogue editors are hobbled by a lack of understanding of the non-sound aspects of filmmaking. Unlike editors who cut effects, backgrounds or Foley, a dialogue editor's work is directly affected by what has gone on before. How a film was shot, recorded and edited will dramatically influence the dialogue editing process. Much of this book, then, deals with things which at first glance don't appear to be dialogue. You will find overviews of film picture and sound postproduction--film, tape, NTSC, PAL, 24p, and HD. There are summaries of film picture editing, OMF manipulation, and ADR management.

Early in its history, anthropology was a visual as well as verbal discipline. But as time passed, visually oriented professionals became a minority among their colleagues, and most anthropologists used written words rather than audiovisual modes as their professional means of communication. Today, however, contemporary electronic and interactive media once more place visual anthropologists and anthropologically oriented artists within the mainstream. Digital media, small-sized and easy-to-use equipment, and the Internet, with its interactive and public forum websites, democratize roles once relegated to highly trained professionals alone. However, having access to a good set of tools does not guarantee accurate and reliable work. Visual anthropology involves much more than media alone. This book presents visual anthropology as a work-in-progress, open to the myriad innovations that the new audiovisual communications technologies bring to the field. It is intended to aid in contextualizing, explaining, and humanizing the storehouse of visual knowledge that university students and general readers now encounter, and to help inform them about how these new media tools can be used for intellectually and socially beneficial purposes. Concentrating on documentary photography and ethnographic film, as well as lesser-known areas of study and

presentation including dance, painting, architecture, archaeology, and primate research, the book's fifteen contributors feature populations living on all of the world's continents as well as within the United States. The final chapter gives readers practical advice about how to use the most current digital and interactive technologies to present research findings.
