An entrepreneur is one of the important segments of economic growth as well as social growth. Basically, an entrepreneur is a person who is responsible for setting up a business or an enterprise in a society for social growth. Infact, he is one who has the initiative, skill for innovation and who looks for high achievements. He is a catalytic agent of change and works for the good of the society. According to Peter F. Ducker "Effective entrepreneurship is not making speeches or being liked; entrepreneurship is defined by results, not attributes." That means he puts up new Greenfield projects that actually creates wealth, opens up employment opportunities and fosters other sectors. An entrepreneur is one of the most important inputs in the economic development of a country or regions within the country. Entrepreneurship development is getting a position of great importance for tackling ever-growing problem of unemployment due to rapid population growth.

Secondary Education : School admissions, fourth report of session 2003-04, Vol. 2: Oral and written Evidence

This forward-looking book combines theory and practice to present a broad introduction to the opportunities and challenges of teaching English in secondary school classrooms. Each chapter explains the background to current debates about teaching the subject and provides tasks, teaching ideas, and further reading to explore issues and ideas in relation to school experience. With reference to new legislation, the chapters suggest a range of approaches to the teaching of reading, writing, speaking and listening, drama, media study, information technology, language study, grammar, poetry, Shakespeare, GNVQ and A Level English Language and Literature. Learning to Teach English in the Secondary School offers principles and practical examples of teaching and learning in the context of the end of the twentieth century when new notions of literacy compete with the demands of national assessment. Taking as its starting point the changing ideologies of English as a subject, the text addresses questions about the nature of teacher education. It raises issues concerning competence-based courses, working with a mentor in school and monitoring the development of a student teacher. Learning to Teach Subjects in the Secondary School series, edited by Sue Capel, Tony Turner and Marilyn Leask.

Now in an updated third edition, English Teaching in the Secondary School is a comprehensive guide to the theory and practice of teaching English. Presenting an informed view of current educational policy, the authors provide advice to help students creatively and independently interpret government initiatives and incorporate them in their teaching practice. With practical ideas for use in the classroom, extensive discussion of theory and opportunities for reflection and critical thought, the authors guide students through the whole process of English teaching in the secondary school. Fully updated to include: a chapter on research and writing for M Level students references to the Every Child Matters agenda updates to the KS3 and 14-19 curriculum revised GCSE specifications an emphasis on creativity, flexibility and learner engagement the impact of globalisation and technology on literacy. Written in an accessible style, with a wealth of advice and ideas, this book forms essential reading for practising teachers, lecturers, PGCE students and those undertaking initial teacher training, and is suitable for those engaging in M Level study.

Assessment for Learning is based on a two-year project involving thirty-six teachers in schools in Medway and Oxfordshire. After a brief review of the research background and of the project itself, successive chapters describe the specific practices which teachers found fruitful and the underlying ideas about learning that these developments illustrate. Later chapters discuss the problems that teachers encountered when implementing the new practices in their classroom and give guidance for school management and LEAs about promoting and supporting the changes. --from publisher description

This book is aimed at those who encounter secondary school students with dyslexia on a daily basis. It takes a practical approach by breaking down the whole process of assessing the issues involved and then suggesting ways for teaching staff and students to implement a suitable program of study skills. It is well structured, clear, useful and written with the needs of busy teachers and students very much in mind. Included are assessment approaches, checklists, photocopiable activities, and suggestions for useful resources. Results from qualitative research are included to provide an additional practical insight into study skills and dyslexia in the secondary school. Theoretical knowledge has been used to underpin and inform practice. Teachers of students with dyslexia who are not specialists should find this a useful guide. It will also be of great use to SENCOs and Teaching Assistants.

A 'one-stop shop' for assessment for student teachers covering all major assessment types carefully balancing theory with practical case studies and classroom activities.

Mick Waters has consistently been a down-to-earth voice in the increasingly complex world of education for many years. He has regularly endeared himself to school communities in the UK and overseas by talking the sort of sense they needed to hear - practical, challenging, inspiring, insightful, engaging. A Financial Times best book of 2020, an “utterly compelling” (The Sunday Times, London) argument from leading political analyst David Goodhart about the severely imbalanced distribution of status and work in western societies. The coronavirus pandemic revealed what we ought to have already known: that nurses, caregivers, supermarket workers, delivery drivers, cleaners, and so many others are essential. Until recently, this work was largely regarded as menial by the same society that now lauds them as heroes. How did we get here? “With great clarity and unfailing sympathy for the human condition,” (Matthew Crawford, New York Times bestselling author of Shop Class as Soulcraft) this follow-up to the bestselling *The Road to Somewhere* divides society into people who work with their Heads (cognitive work), with their Hands (manual work), or with their Hearts (caring work), and considers each group’s changing status and influence. Today the “best and the brightest” trump the “decent and hardworking.” Qualities like character, compassion, craft, and physical labor command far less respect in our workforce. This imbalance has led to the disaffection and alienation of millions of people. David Goodhart reveals the untold history behind this disparity and outlines the challenges we face as a result. Cognitive ability has become the gold standard of human esteem, and those in the cognitive class now shape society largely in their own interest. To put it bluntly: smart people have become too powerful. A healthy, democratic society respects and rewards a broad range of achievements, and provides meaning and value for people who cannot—or do not want to—achieve in the classroom and professional career market. We must shift our thinking to see all workers as essential, and not just during crises like the coronavirus pandemic. “Insightful and provocative,” (Michael Lind, author of *The New Class War*) this is a “deeply felt and persuasive call for rethinking the social order” (Publishers Weekly).

Now available for Kindle. Click here. "We shape our tools and then they shape us." With these words, Kenneth Boulding captured one of the great truths of the modern world. In *Fertilizers, Pills, and Magnetic Strips*, Gene V Glass analyzes how a few key technological inventions changed culture in America and how public education has changed as a result. Driving these changes are material self-interest and the desire for comfort and security, both of which have transformed American culture into a hyper-consuming, xenophobic society that is systematically degrading public education. Glass shows how the central education policy debates at the start of the 21st century (vouchers, charter schools, tax credits, high-stakes testing, bilingual education) are actually about two underlying issues: how can the costs of public education be cut, and how can the education of the White middle-class be "quasi-privatized" at public expense? Working from the demographic realities of the past thirty years, he projects a challenging and disturbing future for public education in America.

Recent advances in neuroimaging and genetics technologies have enhanced our understanding of neurodevelopmental disorders in adults. The authors in this volume not only discuss such advances as they apply to adults with learning disorders, but also address their translation into clinical practice. One cluster of chapters addresses developmental concerns as children and adolescents with learning disorders approach young adulthood. Experts discuss dyslexia, language-based and writing disorders, perhaps the most widely studied group of learning disorders, from the point of view of neuroimaging and genetic underpinnings. Chapters on the neuroscience of nonverbal, math and executive function disorders are also included. Clinically-oriented chapters with case studies, recommendations for accommodation, and considerations for evaluation follow. Study of specialized populations - such as late high school students, college, medical and law students - further demonstrate how our expanded knowledge base may be applicable to clinical practice. The heterogeneity of adults with learning disorders, the complexity of their clinical presentation and co-existing disorders are addressed from both a scientific and clinical point of view demonstrating how empirical research and clinical practice inform each other. This volume will enhance the practice of clinicians and educators working with adults with neurodevelopmental disorders, as well as providing essential current information for researchers of adults with learning disorders.

This book gathers selected papers from the Hong Kong Association for Educational Communications and Technology 2019 International Conference on the theme of "Shaping the Future of Education, Communication and Technology." It contributes to a scholarly discussion that looks beyond what future media and technology can offer for education, and reflects on best practices and lessons learned from applying new media and technology in a wide range of fields.

Scholars from educational technology, communication, and higher education share their research work in various formats such as empirical research, best-practice case studies, literature reviews, etc. The topics of the papers are divided into four main areas, including curriculum, pedagogy and instructional design; teaching and learning experiences with technology; online learning and open education resources; and communication and media. The book's unique quality is its combination of perspectives and research work on communication, education and technology. Thus, it will encourage an interdisciplinary discourse and exchange concerning communication, new media, and educational practices.
