You can checkmate your opponent in the English Opening, Reti Opening, Birds Opening, or Dutch Defence. These 200 puzzles help you find checkmates to win quickly. This book focuses on Flank Opening games with lines other than the 1.e4 lines, or 1.d4 d5 or 1.d4 Nf6 lines. You have 50 mates in one and 50 mates in two with each color. Sharpen your skills. Look for checks. When it is your move in chess, you must first look for checks. If you find a check that forces checkmate, then you don't need to look any further. Play the mate. Game over. You win. Good job. How are the puzzles easy? Because every move is a check. Even the mates in two begin with a check. How are they puzzles? Because there is more than one possible check. The author's goal is for you to be faster each time you solve these common early checkmates. There are three levels of skill. First, you learn what checkmates can occur in the opening. Second, you learn to solve them correctly. Third, you learn them so well that you cannot miss them. Puzzles 1 to 100 are all White to move. White starts at the bottom of those diagrams. Puzzles 101 to 200 are all Black to move. Black starts at the bottom of those diagrams. Repeated practice makes you a winner. Go forth and win!

Do you want to know how to beat your opponent from ANY position on the board? Do you want to learn how to anticipate his every single move? Would you like to know EXACTLY what you need to do to SKYROCKET your rating in half the time? If your answer is yes, then read on! Hi, my name is Bobby Silman, and I have been helping people improve their chess skills for the past 11 years. I remember when I first started playing chess, there were times when I played like crap. I would lose several games in a row and see my score drop quickly. Have you ever had something like that happen to you? If yes, then you know exactly how it feels! When you lose, it's as if your opponent has some sort of mental superiority over you, which causes you frustration, almost to the point of not letting you sleep at night! At this point, you may be asking yourself, how do I improve my skills? This is exactly what I was wondering as well. So, I used the feeling of hatred that I had experienced when I was defeated to gain more knowledge of the game and increase my skills. I spent thousands of hours perfecting my game, but today things have changed dramatically! After years of teaching, I can tell you with certainty that the best and fastest way to increase your skills is to follow a well-structured curriculum step by step. That's why I decided to summarize all my experience in this guide containing the same information for which I am paid handsomely by my students. Are you curious about what this is all about? What is really important in chess is to understand the reason behind each move. I mean, you need to know what the result of the opening you are playing is and not just memorize it. This is because things may not go as you planned, and therefore you need to be able to modify your plan. Do you want to know what is the cause of your mistakes 99% of the time? So, you make mistakes when you

are in a bad position on the board, where you don't know what to do, and you play recklessly. So, you must know how to create winning positions where you can use tactics to crush your opponent. In addition, other very important topics are included, such as: the 12 skills for everyday life that science says you can develop through chess Master these 13 openings (+ variations) to establish dominance in just the first few moves (for both white and black) Dominate the middle-game with these 8 lethal tactics 10 valuable tips for a successful closing Every single move is described in detail + 118 high quality diagrams to show them Increase your focus with these 3 exercises The right way to analyze the games you've already played How to handle losing and 5 tips to learn from it How to easily understand algebraic notation What are the 2 types of cheaters and 7 strategies to detect them A 9-step teaching program for kids Did you happen to hear somewhere that to be a good chess player, you need to have above-average intelligence? Well, know that this is big nonsense! I am convinced that if you follow the right curriculum and practice enough, you can easily beat an opponent with a higher IQ than you. Do you think you are too old to start playing? Then I tell you that you might as well reach the highest levels even if you start playing at 25, 30, or even 50 years old. I want to be honest with you, you can spend days playing, but your rating can only go down without the right guidance. Let me take you by the hand and lead you through every single step! Click the BUY NOW button and start learning!

In this book, some of the world's foremost 'experts on expertise' provide scientific knowledge on expertise and expert performance.

Are you looking for a simple guide to learn chess? That's the reason why I have written this books! Chess is a fascinating game for many reasons. Many people want to play it, but only a few finally end up learning how to do it. The reason for this is not hard to guess: chess is simple to learn, but it takes patience to perfect the art of playing it. Even when you have perfected the art, you still need to improve your skills daily. Often, when some people want to learn how to play chess, they don't usually know where to seek guidance. Sometimes, the available materials are disjointed and not organized in a logical way to offer a hierarchical flow of information. That's the main reason why I have written this simple guide to teach anyone, regardless of age, gender, or prior knowledge how to play chess. Even though this guide is for beginners, it is also recommended for people who already know how to play chess but want to improve their skills or learn new moves. I have also tried as much as possible to make lesser use of texts to explain concepts and moves. Rather, I have used proper diagrams to make the explanation of concepts and moves easier for you to understand. Each chapter will lead directly to the next, with the level of difficulty only varying slightly. Ready to start learning? Click the BUY NOW button!

Librarian and educator Michael Sullivan provides the tools that librarians, school library media specialists, and educators need to overcome cultural and developmental challenges, stereotyping, and lack of role models that essentially program boys out of the library. Attracting boys to library programs in the "tween" years will maintain their interest in books and reading over a lifetime, creating good health habits from a young age. Sullivan's practical and proven programming builds on the unique developmental needs and interests of boys in this middle stage. From playing chess to swathing the walls in butcher paper to give boys a physical space to respond to books, Sullivan's practical ideas and developmentally astute insights show librarian and teacher colleagues how to make vitally needed connections with this underserved population.

Sharpen your chess skills. Win faster. Find checkmates quickly after 1.e4 in Semi-Open Games. Look for checks. When it is your move in chess, you must first look for checks. If you find a check that forces checkmate, then you don't need to look any further. Play the mate. Game over. You win. Good job. These 200 puzzles train your eyes to find possible mates in Semi-Open Games that begin 1.e4 (without the King Pawn 1.e4 e5 or Sicilian Defence 1.e4 c5). You have four sections with 50 mates in one and 50 mates in two with each color. The last half of puzzles in each section come from French Defence 1.e4 e6 games. A fourth of the games are from Caro-Kann 1.e6 c6 games. The rest are other 1.e4 openings such as Queen Fianchetto 1...b6, Scandinavian Defence 1...d5, Alekhine Defence 1...Nf6, Modern Defence 1...g6, and Pirc Defence 1...d6. Tim Sawyer gives you a wide variety of common mates that go way beyond the simplest mates. How are the puzzles easy? Because every move is a check. Even the mates in two begin with a check. How are they puzzles? Because there is more than one possible check. The author's goal is for you to solve these puzzles faster and faster each times you go through them. There are three levels of skill. First, you learn what checkmates can occur in the opening. Second, you learn to solve them correctly. Third, you learn them so well that you cannot miss them. Puzzles 1 to 100 are all White to move. White starts at the bottom of those diagrams. Puzzles 101 to 200 are all Black to move. Black starts at the bottom of those diagrams. Repeated practice makes you a winner. Go forth and win!
