The American health care system is a unique mix of public and private programs that critics argue has produced a two-tier system - one for the rich and the other for the poor - that delivers dramatically unequal care and leaves millions of Americans seriously underinsured or with no coverage at all. This book examines the root causes of the inequalities of the American health care system and discusses various policy alternatives. It systematically documents the demands on and the performance of our health care system for different population groups as defined on the basis of gender (women), age (children), race and ethnicity (African Americans, Hispanics, Native Americans), and residence in high poverty areas (rural and inner city locales). For each population, the book documents: historical and demographic profile, data on health status, aspects of inequality including access; quality of care; and endemic, cultural, and lifestyle issues affecting health; policies, laws, and programs relevant to health care; and, indicators of improvement or negative trends.

Chronic conditions such as arthritis, heart disease, and Parkinson disease are the principal cause of all sickness and death in the United States and represent the vast majority of health care expenditures. Although we now live in a world dominated by chronic conditions, health care is still organized around a commitment to treating acute illnesses. *Meeting the Challenge of Chronic Illness* examines current deficiencies in chronic illness care and explores ways to improve it. Addressing the challenges of shifting from the primacy of acute illnesses to the predominance of chronic conditions, the authors identify the components necessary to reorganize and reform health care: properly prepared health care workers; involved patients and families; appropriate use of new technologies, especially information systems; an appropriate role for prevention; and the creation of funding approaches that will provide necessary incentives. This book calls on policy makers, health care providers, and educators to address one of the greatest challenges facing the health care system.

Focusing on the specific needs of people with a certain disease, condition, or stage of life, this book discusses the special fitness and nutritional needs of various populations. Not only are overall health, fitness, and exercise recommendations discussed, but anatomy and physiology is covered to promote understanding of changes that occur among body systems as diseases or conditions develop. This text focuses on building appropriate exercise programs, physiological changes associated with various conditions, important precautions during exercise, outcome expectations, and basic nutritional considerations for various populations who frequently seek the services of a health and fitness professional. This book will serve as a comprehensive course text for students enrolled in personal training programs and students pursuing health/fitness professional degrees.

An Introduction to Social Policy explores essential welfare topics, themes and issues for students studying social policy or related disciplines such as sociology, social work, or nursing and social care. - Part One examines key concepts including welfare, social justice, diversity and health and well-being. - Part Two explores policy issues in relation to key stages of the lifecourse. - Part Three takes a comparative perspective, discussing the international issues and supranational bodies that impact on British and European social policy today. The concise chapters define the key terms and outline the central debates, giving students a fundamental foundation for their degree. Chapter overviews and summaries guide readers through the book, and questions for reflection conclude each chapter to test readers' knowledge. This book is essential reading for all students of social policy and the social sciences, as well as those taking joint

honours programmes in social work, sociology, criminology, politics and social care. Peter Dwyer is Professor of Social Policy at the University of Salford. Sandra Shaw is Senior Lecturer in Social Policy at the University of Salford. A report that considers the broad issue of why science and engineering are important and why they should be at the heart of Government policy. It also considers three more specific issues: the debate on strategic priorities; the principles that inform science funding decisions; and, the scrutiny of science and engineering across Government.

Although the last two decades have seen the healthcare systems of most developed countries face pressure for major reform, the impact of this reform on the relationship between empowerment, consumerism and citizen's rights has received limited research attention. Globalisation, Markets and Healthcare Policy sets out to redress this imbalance. This book explores the extent to which globalisation and commercialisation relate to current and emerging health policies. It also looks at the implications for citizens, patients and social rights, as well as how policy making interacts with the interests of global and European trade and economic policies. Topics discussed include: How the impact of globalisation on health systems is apparent in the influence of international actors and European policies. How the impact of globalisation is mediated by national priorities and policies and is therefore reflected in diverse influences. How commercialisation of health is presented as benefiting citizens and patients but has the potential to undermine the aims and values inherent in health systems. How the role of citizens' interests, social rights, patient's rights and priorities of patient and public involvement need to be separated from commercialisation, choice and consumerism in health care. Essential reading for policy makers and students of public policy, politics, law and health services, Globalisation, Markets and Healthcare Policy will also appeal to those interested in patient involvement international healthcare, international relations, trans-national organisations and the EU.

Dr. Casper Rollins knows how to have fun. The love of his life, Kage Myers, lived every moment to the fullest before he died. Now, Casper goes skydiving, mountain-climbing or on other adrenaline-soaked adventures when he wants to feel closer to his lost love. Medical director Eric Holtz is married to his work -- so much so his husband left him. But when his niece shows up, pregnant and in need of an ally, Eric suddenly has family again. Unfortunately, her obstetrician, Casper Rollins, is sexy enough to turn Eric into a blushing adolescent. What begins as a game to break Eric of his workaholic tendencies escalates into scorching sex and feelings that can't be ignored. Casper never planned to give his heart to anyone other than Kage, and Eric won't accept anything less. If these two want a future, they'll have to embrace the lesson Kage taught Casper long ago: You only live once.

The Congressional Record is the official record of the proceedings and debates of the United States Congress. It is published daily when Congress is in session. The Congressional Record began publication in 1873. Debates for sessions prior to 1873 are recorded in The Debates and Proceedings in the Congress of the United States (1789-1824), the Register of Debates in Congress (1824-1837), and the Congressional Globe (1833-1873)

"10,000 Babies" is a compilation of true events in the life of an obstetrician and his patients, presented as short stories. Some may bring a smile others a tear. Anyone who has a child, whether a mother or a father, will not remain indifferent. These stories range from those of the very early pregnancy, to the birth of triplets, from the anguish of not knowing if the baby will be born prematurely, to the unusual case where a mother thought that she was pregnant, when in reality she was not. Those that have not yet become parents or are already parents, will find in "10,000 Babies" a world they did not know existed. Sometime in the future, they may even relive many of those stories. Also included are chapters about the history of how we got where we are in the care of pregnant women, how different cultures influence childbirth, why myths surrounding pregnancy are still with us, and why those that care for pregnant women are a special breed of people.
