

The Consuming Instinct What Juicy Burgers Ferraris Pornography And Gift Giving Reveal About Human Nature Gad Saad

Simplified Chinese edition of Midnight Sun

??

Prominent atheists claim the Bible is a racist text. Yet Dr. Martin Luther King Jr. read it daily. Then again, so did many ardent segregationists. Some atheists claim religion serves to oppress the masses. Yet the classic text of the French Revolution, What is the Third Estate?, was written by a priest. On the other hand, the revolutionaries ended up banning religion. What do we make of religion's confusing role in history? And what of religion's relationship to science? Some scientists claim that we have no free will. Others argue that advances in neurobiology and physics disprove determinism. As for whispering to the universe, an absurd habit say the skeptics. Yet prayer is a transformative practice for millions. This book explores the most common atheist critiques of the Bible and religion, incorporating Jewish, Christian, and Muslim voices. The result is a fresh, modern re-evaluation of religion and of atheism. Scott A. Shay is a Co-Founder and Chairman of Signature Bank and a longstanding Jewish community activist. Shay started a Hebrew school, an adult educational program, and chaired several Jewish educational programs. He is the author of Getting our Groove Back: How to Energize American Jewry and has been thinking about religion, reason, and modernity since wondering why his parents sent him to Hebrew school.

Simplified Chinese edition of The World Beyond Your Head: On Becoming an Individual in an Age of Distraction

All over Canada, from coast to coast, there is new life in the Christian church. In spite of declining numbers, every Christian tradition has stories to tell of new ministries, fledgling Christian communities, and fresh expressions of church springing up, sometimes in unlikely places. Here, seventeen authors with experience in areas such as church revitalization, innovative ministry, evangelism, and church planting, reflect on what they are seeing and how the lessons they have learned can guide us into ways of health and vitality. They tell us about immigrant churches and indigenous ministries, about youth research and environmental concerns, about churches in the city and churches in the country, about leadership and spirituality. Scattered throughout the book are ten exciting stories of new ministries and new churches, from different traditions and different parts of the country, all seeking to engage their communities with the Gospel. Does the church in Canada have a future? The answer these authors give is a resounding yes--green shoots can grow out of dry ground--if we are prepared to rise to the challenge and follow where the Spirit of God leads. This book is timely, comprehensive, challenging, and deeply encouraging.

The science of evolutionary psychology, which aims to answer such questions as "Why is the mind designed the way it is?" and "How does input from the environment interact with the mind to produce behavior?" has emerged as a vibrant new discipline with groundbreaking discoveries. In this handbook leading scholars in the field discuss the foundations of the field and recent discoveries. The seminal handbook of its kind in the field, The Handbook of Evolutionary Psychology is an indispensable reference tool for every psychologist and student interested in keeping abreast of new ideas in the field.

concepts and theories (in short, IS-EP research). The book is organized in three main parts: Part I focuses on EP concepts and theories that can be used as a basis for IS-EP research; Part II provides several exemplars of IS-EP research in practice; and Part III summarizes emerging issues and debate that can inform IS-EP research, including debate regarding philosophical foundations and credibility of related findings. IS-EP research is generally concerned with the use of concepts and theories from EP in the study of IS, particularly regarding the impact of modern information and communication technologies on the behavior of individuals, groups, and organizations. From a practitioners' perspective, the most immediate consumers of IS-EP research are those who develop and use IS, of which a large contingent are in businesses that employ IS to support marketing, order-taking, production, and delivery of goods and services. In this context, IS-EP findings may be particularly useful due to the present need to design web-based interfaces that will be used by individuals from different cultures, and often different countries, and whose common denominator is their human nature.

Our drive to consume -- our desire for food, clothing, smart phones, and megahomes -- evolved from our ancestors' drive to survive. But the psychological and neural processes that originally evolved to guide mammals toward resources that are necessary but scarce may mislead us in modern conditions of material abundance. Such phenomena as obesity, financial bubbles, hoarding, and shopping sprees suggest a mismatch between our instinct to consume and our current environment. This volume brings together research from psychology, neuroscience, economics, marketing, animal behavior, and evolution to explore the causes and consequences of consumption. Contributors consider such topics as how animal food-storing informs human consumption; the downside of evolved "fast and frugal" rules for eating; how future discounting and the draw toward immediate rewards influence food consumption, addiction, and our ability to save; overconsumption as social display; and the policy implications of consumption science. Taken together, the chapters make the case for an emerging interdisciplinary science of consumption that reflects commonalities across species, domains, and fields of inquiry. By carefully comparing mechanisms that underlie seemingly disparate outcomes, we can achieve a unified understanding of consumption that could benefit both science and society.

A comprehensive survey of the evolutionary science of human sexual behavior, *Evolution and Human Sexual Behavior* invites us to imagine human sex from the vantage point of our primate cousins, in order to underscore the role of evolution in shaping all that happens, biologically and behaviorally, when romantic passions are aroused.

In this highly informative and entertaining book, the founder of the vibrant new field of evolutionary consumption illuminates the relevance of our biological heritage to our daily lives as consumers. While culture is important, the author shows that innate evolutionary forces deeply influence the foods we eat, the gifts we offer, the cosmetics and clothing styles we choose to make ourselves more attractive to potential

mates, and even the cultural products that stimulate our imaginations (such as art, music, and religion). The book demonstrates that most acts of consumption can be mapped onto four key Darwinian drives—namely, survival (we prefer foods high in calories); reproduction (we use products as sexual signals); kin selection (we naturally exchange gifts with family members); and reciprocal altruism (we enjoy offering gifts to close friends). The author further highlights the analogous behaviors that exist between human consumers and a wide range of animals. For anyone interested in the biological basis of human behavior or simply in what makes consumers tick—marketing professionals, advertisers, psychology mavens, and consumers themselves—this is a fascinating read.

Ways of Sensing is a stimulating exploration of the cultural, historical and political dimensions of the world of the senses. The book spans a wide range of settings and makes comparisons between different cultures and epochs, revealing the power and diversity of sensory expressions across time and space. The chapters reflect on topics such as the tactile appeal of medieval art, the healing power of Navajo sand paintings, the aesthetic blight of the modern hospital, the role of the senses in the courtroom, and the branding of sensations in the marketplace. Howes and Classen consider how political issues such as nationalism, gender equality and the treatment of minority groups are shaped by sensory practices and metaphors. They also reveal how the phenomenon of synaesthesia, or mingling of the senses, can be seen as not simply a neurological condition but a vital cultural mode of creating social and cosmic interconnections. Written by leading scholars in the field, Ways of Sensing provides readers with a valuable and engaging introduction to the life of the senses in society.

Do you want to learn a healthy and effective technique for losing weight and having more energy? Have you ever imagined yourself as attractive, thin and free from any pain caused by excessive weight? If you said yes to any of the above questions, then look no further because all of the details you need to know about losing weight effectively can be found in this book. This book is written to help you approach weight loss in a very effective way. Instead of fighting against your desires and habits, you can quickly use hypnosis to forget your cravings, master portion control and build many other fat-melting habits. The topics you will find in this book include the following: · What Hypnosis is · Importance of Hypnosis For Women · Hypnosis and Weight Loss Meditation To Burn Fat · Weight Management · Gastric Band Hypnosis · Hypnosis Techniques · Mindful Eating: Foods To Avoid · Power of Affirmations and The Law of Attraction · How to Increase Your Metabolism With Hypnosis · Methods of Self-Suggestion Hypnosis it's a powerful technique that can heal your body image issues, make you stop overeating and fix your mind. Hypnosis weight loss programs have now been proven over the past few decades to be an effective way to lose weight and relax. Losing weight through the use of hypnosis is the only way to get in touch with the inner part of you that is invariably struggling with weight issues. Accepting your body and changing it for your own benefit will help you boost your self-confidence and self-esteem. Take a step now! Grab your copy today!

Ritual has long been a central concept in anthropological theories of religious transmission. Ritual, Performance and the Senses offers a new understanding of how ritual enables religious representations – ideas, beliefs, values – to be shared among participants. Focusing on the body and the experiential nature of ritual, the book brings together insights from three distinct areas of study: cognitive/neuroanthropology, performance studies and the anthropology of the senses. Eight chapters by scholars from each of these sub-disciplines investigate different aspects of embodied religious practice, ranging from philosophical discussions of belief to explorations of the biological processes taking place in the brain itself. Case studies range from miracles and visionary activity in Catholic Malta to meditative practices in theatrical performance and include three pilgrimage sites: the Church of the Holy Sepulchre in Jerusalem, the festival of Ramlila in Ramnagar, India
