The Filmmaker's Guide to Visual Effects offers a practical, detailed guide to visual effects for non-VFX specialists working in film and television. In contemporary filmmaking and television production, visual effects are used extensively in a wide variety of genres and formats to contribute to visual storytelling, help deal with production limitations, and reduce budget costs. Yet for many directors, producers, editors, and cinematographers, visual effects remain an often misunderstood aspect of media production. In this book, award-winning VFX supervisor and instructor Eran Dinur introduces readers to visual effects from the filmmaker's perspective, providing a comprehensive guide to conceiving, designing, budgeting, planning, shooting, and reviewing VFX, from pre-production through post-production. The book will help readers: Learn what it takes for editors, cinematographers, directors, producers, gaffers, and other filmmakers to work more effectively with the visual effects team during pre-production, on the set and in post, use visual effects as a narrative aid, reduce production costs, and solve problems on location; Achieve a deeper understanding of 3D, 2D, and 2.5D workflows; the various VFX crafts from matchmove to compositing; essential concepts like photorealism, parallax, roto, and extraction; become familiar with the most common types of VFX, their role in filmmaking, and learn how to plan effectively for the cost and complexity of VFX shots; See visual effects concepts brought to life in practical, highly illustrated examples drawn from the real-world experiences of industry professionals, and discover how to better integrate visual effects into your own projects.

The struggle for postzionism is a conflict over national memory and the control of cultural and physical space. Laurence J. Silberstein analyzes the phenomenon of postzionism and provides an intervention into this debate.

This practical guide offers all important digital television, sound radio, and multimedia standards such as MPEG, DVB, DVD, DAB, ATSC, T-DMB, DMB-T, DRM and ISDB-T. It provides an in-depth look at these subjects in terms of practical experience. In addition explains the basics of essential topics like analog television, digital modulation, COFDM or mathematical transformations between time and frequency domains. The fourth edition addresses many new developments and features of digital broadcasting. Especially it includes Ultra High Definition Television (UHDTV), 4K, HEVC / H.265 (High Efficiency Video Coding), DVB-T2 measurement techniques and practice, DOCSIS 3.1, DVB - S2X, and 3DTV, as well as VHF-FM radio, HDMI, terrestrial transmitters, and stations. In the center of the treatments are always measuring techniques and of measuring practice for each case consolidating the knowledge imparted with numerous practical examples. The book is directed primarily at the specialist

working in the field, on transmitters and transmission equipment, network planning, studio technology, playout centers and multiplex center technology and in the development departments for entertainment electronics or TV test engineering. Since the entire field of electrical communications technology is traversed in a wide arc, those who are students in this field are not excluded either.

Digital Television closely examines all present-day TV transmission methods. These include MPEG, DVB, ATSC and ISDB-T. DVD is also discussed. The text covers these subjects in a practical-minded manner. Although mathematical formulations are used, they are in most cases only utilized to supplement the text. The book also contains chapters dealing with basic concepts such as digital modulation or transformations into the frequency domain. A major emphasis is placed on the measuring techniques used on these various digital TV signals. Practical examples and hints concerning measurement are provided. The book starts with analog TV base and signal, continues with MPEG-2 data stream, digital video, and digital audio, and then moves on to compression methods. After an excursion into the digital modulation methods, all the mentioned transmission methods are discussed in detail.

Learn all about Codecs--how they work, as well as design and implementation with this comprehensive, easy-to-use guide to compression. After reading this book, you will be able to prepare and distribute professional audio and video on any platform including streamed to the web, broadcast on-air, stored in PVRs, Burned onto CD-ROMs or DVDs, delivered by broadband, or viewed in Kiosk applications, PDA devices, and mobile phones. Key benefits: * Learn from an award-winning technologist for a top media company who knows how to explain codecs in terms you can understand * This entry-level guide contains clear explanations and hundreds of diagrams--no math background needed! Also includes a comprehensive glossary which serves as a useful reference to many technical terms and jargon you will encounter * Learn how to choose the right technique to get the most out of your compression system--saving both storage space and money

The Digital Satellite TV Handbook and companion CD-ROM will serve as your complete interactive course in the new digital satellite TV technologies. This textbook, which provides a comprehensive overview of all the digital satellite TV platforms currently in use world-wide, includes the essential satellite coverage maps and transmission parameters that readers will need to receive digital TV services from any location around the world. It also presents those aspects of digital video compression and high definition TV that are of the highest relevance to installers, technicians, and other satellite professionals working in the global direct-to-home (DTH) satellite TV industry. The Digital Satellite TV Handbook analyzes the hardware requirements of digital DTH receiving systems by comparing and contrasting the new digital TV technologies with earlier analog TV transmission systems, so that readers can readily grasp all of the details required

to make the transition from the analog era of yesterday to the new all-digital world of the future. The Digital Satellite TV Handbook is based on the author's extensive experience as an instructor for private corporations and trade associations around the world. To facilitate the learning experience, the author has included a series of "Quick Check" exercises and answer keys so that readers can determine for themselves whether or not they have adequately understood the various course segments provided. Mathematical formulas that are relevant to course content also are presented at the end of each chapter. Best of all, the companion CD-ROM version of the Handbook, which may be opened by any Internet browser software program, contains numerous Internet hyperlinks. Readers can click on any textbook hyperlink to immediately access hundreds of additional pages of supplementary information from the world-wide web or obtain information updates concerning the current operations of satellite system operators and digital TV programmers around the globe. The CD-ROM also gives readers access to full-color versions of all the textbooks, footprint maps, charts and other illustrations. A graphic-intensive training manual "Quick Check" exercises in each chapter Mathematical formulas relevant to each chapter's content

A guide to research, this volume includes 925 studies of Chaucer written between 1900 and 1984. Each entry is listed once, alphabetically, under an appropriate topic heading or under the title of the work it treats most directly. The annotations provide bibliographic information, identify the primary focus of the item annotated, and summarize its content. See entry PR1868. These classic circuits were chosen from Markus' Sourcebook of electronic circuits (1968), Electronics circuits manual (1971), and Guidebook of electronics circuits (1974). With circuit integration onto chips, many older circuits have become obsolete. This guide is a distillation of those circuits still in use today for which parts are still available. Get started NOW with this book and DVD set, a one-stop shop written by a guerrilla filmmaker, for guerrilla filmmakers. You will learn how to make your project better, faster, and cheaper. The pages are crammed with 500 full-color pictures, tips from the pros, resources, checklists and charts, making it easy to find what you need fast. The DVD includes: * Video and audio tutorials, useful forms, and interviews with leading documentary filmmakers like Albert Maysles (Grey Gardens), Sam Pollard (4 Little Girls), and others * 50+ Crazy Phat Bonus pages with jump start charts, online resources, releases, storyboards, checklists, equipment guides, and shooting procedures Here's just a small sampling of what's inside the book: * Putting together a crew * Choosing a camera * New HDV and 24P cameras * Shooting in rough neighborhoods * Interview skills and techniques * 10 ways to lower your budget * Common production forms

This book is a complete manual on the Sony Cyber-shot DSC-RX100 VI camera, one of the most advanced, but still pocketable, cameras available. With this book, author Alexander White provides users of the RX100 VI with a guide to all aspects of the camera's operation. Using a tutorial-like approach, the book shows beginning and intermediate photographers how to take still images and record video with the RX100 VI, and explains when and why to use the camera's many features. The book provides details about the camera's automatic and advanced shooting modes, including burst shooting at rates as fast as 24 frames per second, as well as its numerous menu options for shooting, playback, and setup. The book includes information about using Wi-Fi and Bluetooth connections for image transfer, remote control, and adding location information to images. The book has more than 500 color photographs or illustrations that help explain the camera's menus, shooting screens, and features. These images include examples of photographs taken using the RX100 VI's Scene mode, with settings optimized for subjects such as landscapes, sunsets, portraits, low-light, and action shots; and the Creative Style and Picture Effect menu options, with settings that alter the appearance of images. The book also provides introductions to topics such as street photography, astrophotography, and digiscoping, with photographic examples. The book includes a full discussion of the video features of the RX100 VI, which can shoot HD and 4K (ultra-HD) movies, and which offers manual control of exposure and focus during movie recording. The book explains the camera's numerous features that are useful for professional-level videography, including Picture Profiles that allow adjustment of settings such as gamma curve, black level, knee, and detail. The book provides detailed information about recording 4K video to an external video recorder

A professional introduction to the end-to-end process of digital filmmaking! The EDCF Guide to Digital Cinema Production sheds light on the ongoing and confusing transition from analog to digital technology in film production. In addition to a complete analysis of technical concerns, this text deals with a number of issues where European and Hollywood priorities differ. It adds fuel to the discussion on "Photo-Chemical Fundamentalism" and the future of traditional film-based cinematography. With special emphasis on new HD production techniques for the big cinema screen, this guide is the one and only resource available from a European perspective. The EDCF Guide to Digital Cinema Production provides film professionals and decision-makers in European cinema with an excellent basis for discussions on how to handle the transition from analog to digital technology. Look no further for: * Several production case studies, among them Ingmar Bergman's last film "Saraband" (2003) and Lars von Trier's "Dogville" (2003). * Surveys of HD Systems & Cameras and "The 37 MFAQ on HD Production." * Expert reports on Audio Recording for HD and the Digital Intermediate Process. * Detailed European initiatives in Digital Cinema. * An up-to-date survey of the problematic standards situation for Digital Cinema. * A comprehensive look at archiving - the "Achilles Heel" of digital production. * The pros and cons of producing feature films digitally - a unique and professional view of "the agony and ecstasy." Editor-in-Chief Lasse Svanberg is a founding member of EDCF. He was DoP on 14 feature films 1966-81, founded TM (Technology & Man) Magazine at the Swedish Film Institute in 1968 and was its Chief Editor until 1998 He was elected Fellow of BKSTS 1979, Fellow of SMPTE 1995 and granted Professor's title by the Swedish Government 2002. He is the author of six books on the history and possible future of film, video and television. The European Digital Cinema Forum (EDCF) was constituted in June 2001 as joint Swedish-British-French effort to establish a European forum for discussions, information exchange and industrial activities in the field of Digital Cinema. This project was initiated because digital production, digital distribution and digital exhibition of film is the most radical technical change facing the film industry since sound film was introduced.

This collection looks at the post-network television industry's heady experiments with new forms of interactive storytelling—or wired TV—that took place from 2005 to 2010 as the networks responded to the introduction of broadband into the majority of homes and the proliferation of popular, participatory Web 2.0 companies like Facebook, YouTube, and Twitter. Contributors address a wide range of issues, from the networks' sporadic efforts to engage fans using transmedia storytelling to the production inefficiencies that continue to dog

network television to the impact of multimedia convergence and multinational, corporate conglomeration on entrepreneurial creativity. With essays from such top scholars as Henry Jenkins, John T. Caldwell, and Jonathan Gray and from new and exciting voices emerging in this field, *Wired TV* elucidates the myriad new digital threats and the equal number of digital opportunities that have become part and parcel of today's post-network era. Readers will quickly recognize the familiar television franchises on which the contributors focus—including *Lost*, *The Office*, *Entourage*, *Battlestar Gallactica*, *The L Word*, and *Heroes*—in order to reveal their impact on an industry in transition. While it is not easy for vast bureaucracies to change course, executives from key network divisions engaged in an unprecedented period of innovation and collaboration with four important groups: members of the Hollywood creative community who wanted to expand television's storytelling worlds and marketing capabilities by incorporating social media; members of the Silicon Valley tech community who were keen to rethink television distribution for the digital era; members of the Madison Avenue advertising community who were eager to rethink ad-supported content; and fans who were enthusiastic and willing to use social media story extensions to proselytize on behalf of a favorite network series. In the aftermath of the lengthy Writers Guild of America strike of 2007/2008, the networks clamped down on such collaborations and began to reclaim control over their operations, locking themselves back into an aging system of interconnected bureaucracies, entrenched hierarchies, and traditional partners from the past. What's next for the future of the television industry? Stay tuned—or at least online. Contributors: Vincent Brook, Will Brooker, John T. Caldwell, M. J. Clarke, Jonathan Gray, Henry Jenkins, Derek Johnson, Robert V. Kozinets, Denise Mann, Katynka Z. Martínez, and Julie Levin Russo
