From basic clinical facts to new advanced guidelines, *Practical Cardiology*, by Drs. Majid Maleki, Azin Alizadehasl, and Majid Haghjoo, is your new go-to resource for new developments in cardiology knowledge, imaging modalities, management techniques, and more. This step-by-step, practical reference is packed with tips and guidance ideal for residents, fellows, and clinicians in cardiology, as well as internal medicine, cardiac surgery, interventional cardiology, and pediatric cardiology. Features a wealth of information, including practical points from recently published guidelines, ECGs, hemodynamic traces of advanced imaging modalities in real patients, and much more. Offers a comprehensive review of cardiovascular medicine, from basic to advanced.

"Although Charles Darwin predicted that his theory 'would give zest to [...] metaphysics,' even he would be astonished at the variety of paths his theory has in fact taken. This holds with regard to both gene-Darwinism, a purified Darwinian approach biologizing the social sciences, and process-Darwinism found in the disciplines of psychology, philosophy of science, and economics. Although Darwinism is often linked to highly confirmed biological theories, some of its interpretations seem to profit from tautological claims as well, where scientific reputation cloaks ideological usage. This book discusses central tenets of Darwinism historically as well as systematically, for example the history of different

Darwinian paradigms, the units-of-selection debate, and the philosophical problem of induction as basis of metaphysical Darwinism. Crucially the book addresses the Darwinian claim that evolution is governed by an immutable and unrelentingly cruel law of natural selection. Paradoxically, Darwins theory is a static, non-evolutionary theory of evolution. The current book sketches the historical background and provides suggestions that may help to replace this approach by the idea of an evolution of evolutionary mechanisms (see Escher's 'Drawing Hands' on the cover). This view even suggests a tendency to overcome the blindness of the knowledge acquisition of primordial Darwinian processes and allows for some freedom from external environments. This book first develops a radically Darwinian approach, then criticises this approach from within. Even Darwinism has a tendency to transcend itself. Although the book addresses several empirical issues, it does not challenge particular findings. Instead it builds on many insights of Darwinism and provides a proposal for interpreting known empirical evidence in a different light. It should help pave the way for further developing an understanding of nature that transcends Darwinian metaphysics"--Publisher's description.

Here, for the first time in English, is celebrated French classicist Jacques Jouanna's magisterial account of the life and work of Sophocles. Exhaustive and authoritative, this acclaimed book combines biography and detailed studies of Sophocles' plays, all set in the rich context of classical Greek tragedy and the political, social, religious, and cultural world of Athens's greatest age, the fifth

century. Sophocles was the commanding figure of his day. The author of *Oedipus Rex* and *Antigone*, he was not only the leading dramatist but also a distinguished politician, military commander, and religious figure. And yet the evidence about his life has, until now, been fragmentary. Reconstructing a lost literary world, Jouanna has finally assembled all the available information, culled from inscriptions, archaeological evidence, and later sources. He also offers a huge range of new interpretations, from his emphasis on the significance of Sophocles' political and military offices (previously often seen as honorary) to his analysis of Sophocles' plays in the mythic and literary context of fifth-century drama. Written for scholars, students, and general readers, this book will interest anyone who wants to know more about Greek drama in general and Sophocles in particular. With an extensive bibliography and useful summaries not only of Sophocles' extant plays but also, uniquely, of the fragments of plays that have been partially lost, it will be a standard reference in classical studies for years to come.

This book contains a selection of articles from The 2016 World Conference on Information Systems and Technologies (WorldCIST'16), held between the 22nd and 24th of March at Recife, Pernambuco, Brazil. WorldCIST is a global forum for researchers and practitioners to present and discuss recent results and innovations, current trends, professional experiences and challenges of modern Information Systems and Technologies research, together with their technological development and applications. The main topics covered

are: Information and Knowledge Management; Organizational Models and Information Systems; Software and Systems Modeling; Software Systems, Architectures, Applications and Tools; Multimedia Systems and Applications; Computer Networks, Mobility and Pervasive Systems; Intelligent and Decision Support Systems; Big Data Analytics and Applications; Human-Computer Interaction; Health Informatics; Information Technologies in Education; Information Technologies in Radiocommunications.

The book collects the contributions to the NATO Advanced Study Institute on "Speech Recognition and Understanding: Recent Advances, Trends and Applications", held in Cetraro, Italy, during the first two weeks of July 1990. This Institute focused on three topics that are considered of particular interest and rich of innovation by researchers in the fields of speech recognition and understanding: Advances in Hidden Markov modeling, connectionist approaches to speech and language modeling, and linguistic processing including language and dialogue modeling. The purpose of any ASI is that of encouraging scientific communications between researchers of NATO countries through advanced tutorials and presentations: excellent tutorials were offered by invited speakers that present in this book 15 papers which summarize or detail the topics covered in their lectures. The lectures were complemented by discussions, panel sections and by the presentation of related works carried on by some of the attending researchers: these presentations have been collected in 42 short contributions to the Proceedings. This volume, that the reader can find useful for an overview, although incomplete, of the state of the art in speech understanding, is divided into 6 Parts.

handle the problems and responsibilities they'll face as professional school counselors, preschool through high school. It covers a wide range of topics in-depth, including: effective interventions for racism and bullying, the continuing score gap between ethnic groups, a school counselor's leadership role in implementing school-based action research, a model for advocating on behalf of, and providing services to children with disabilities. The book is packed with real life examples and case descriptions: it provides strategies for preventing and responding to social and emotional problems, improving educational outcomes, and helping children score at optimum levels on high-stakes tests. Updated to include coverage of the latest 'DBPro' extension for database professionals this book is the only reference needed to get started with Visual Studio 2005 Team System. It will guide you through the entire breadth of VSTS. If you are a stakeholder, you have a portal that gives you instant access to project documents, status, and performance indicators. If you are a project manager, you will learn how create, manage, and assess team performance. If you are a developer, you will learn how to write higher-quality code, and ensure that the code works and performs well.

The first textbook for teaching this method to users with little mathematical background logically presents the theory and fundamentals in an easily comprehensible, self-contained way. The result is a must-have for advanced undergraduate students, as well as masters and graduate students and other users of single-crystal X-ray crystallography from many various disciplines.

requires subject knowledge, an understanding of your pupils and how they learn and the confidence to respond to dynamic classroom situations. Learning to Teach in the Secondary School 6th edition offers a comprehensive, in-depth and practical introduction to the skills needed to qualify as a teacher, and is designed to help you to develop those qualities that lead to good practice and a successful future in education. With a focus on evidence-based practice and written by expert practitioners, 35 units cover key concepts and skills, including:

- Managing behaviour to support learning
- Ways pupils learn
- Planning lessons and schemes of work
- Motivating pupils
- Assessment
- Inclusion and special educational needs
- Using ICT and digital technologies
- Pupil grouping, progression and differentiation
- Managing time, workload and stress
- Getting your first teaching post

This fully updated 6th edition includes five new units:

- Primary-secondary transition
- Developing critical thinking
- Creating a language rich classroom
- Education across the four home countries of the UK
- UK education in an international context

The book contains many examples of how to analyse practice to ensure pupil learning is maximised. Activities and tasks in each unit offer opportunities for you to analyse your own learning and performance. Masters level tasks and annotated further readings respond to the requirements for teachers to engage

Mycobacterium tuberculosis is a disease that is transmitted through aerosol. This is the reason why it is estimated that a third of humankind is already infected by Mycobacterium tuberculosis. The vast majority of the infected do not know about their status. Mycobacterium tuberculosis is a silent pathogen, causing no symptomatology at all during the infection. In addition, infected people cannot cause further infections. Unfortunately, an estimated 10 per cent of the infected population has the

probability to develop the disease, making it very difficult to eradicate. Once in this stage, the bacilli can be transmitted to other persons and the development of clinical symptoms is very progressive. Therefore the diagnosis, especially the discrimination between infection and disease, is a real challenge. In this book, we present the experience of worldwide specialists on the diagnosis, along with its lights and shadows.

Neurological injuries (such as hemispheric stroke and spinal cord injury, etc.) can result in muscle weakness and spasticity. The affected muscles often experience progressive changes in their intrinsic mechanical properties, giving rise to muscle contracture and associated alterations in muscle internal structural changes. The mechanisms behind the changes are multifactorial, including disuse, autonomic changes, peripheral neuropathy, a loss of central motor neuron trophic influences, and/or their combinations. Regardless of the origins of weakness

and other changes, it is very important to understand or quantify complex neuromuscular changes after a neurological injury.

Strategic alliances have emerged as an important element of firms' strategies. Following suit, research on alliances has blossomed, concentrating on the various forms alliances take, the reasons of their existence, and increasingly embracing questions of alliance management and governance tasks.

However, most contributions which address the alliance governance problem are yet rather vague and selective in their conception of alliance governance structures as well as the factors which influence their suitability. The aim of this book is to further advance our understanding of alliance governance and to provide recommendations on the problem of alliance governance design. Following the configurational approach, Sascha Albers develops a comprehensive model of alliance governance systems. He identifies relevant structural and instrumental design parameters and analyzes major contingency factors, including member firms' cultures and alliance experience, number of alliance partners, and trust, which impact the design parameters' suitability. He finally deducts five configurations, or ideal types, of alliance governance systems which can be regarded as blueprints for the practitioner and as platform for further research for the alliance scholar. Potential readership includes

The fourth century, the century of Constantine, witnessed the foundation and rise of a new relationship between the Roman Empire and the Arabs. The warrior Arab groups in Oriens became foederati, allies of Byzantium, the Christian Roman empire, and so they remained until the Arab conquests. In Byzantium and the Arabs in the Fourth Century, Irfan Shahîd elucidates the birth of the new federation and the rise of its institutional forms and examines the various constituents of federate cultural life: the phylarchate, the episcopate, the beginnings of an Arab Church, an Arabic liturgy, and the earliest attested composition of Arabic poetry. He discusses the participation of the Arab foederati in Byzantium's wars with her neighbors--the Persians and the Goths--during which those Arab allies, most notably the Tan?khids, contributed to the welfare of the imperium and the ecclesia. In the reign of

Valens, the foederati appeared as the defenders of Nicene Orthodoxy: their soldiers fought for it; their stern and uncompromising saint, Moses, championed it; and their heroic and romantic queen, Mavia, negotiated for it.

The research in this doctoral thesis examines the protection of personal data in two relationships: between judicial and law enforcement authorities of the EU Member States (including Europol and Eurojust) on the one hand and the US on the other hand. The book provides answers to the central question as to whether the EU complies with her own standards of data protection in these internal relations, as well as in the transatlantic cooperation in criminal matters. The new framework decision on data protection in criminal matters that entered into force in early 2009 is a significant element in this study, alongside the agreement concluded between the EU and the US on the mutual assistance in criminal matters of which the entry into force is equally planned for 2009. The book also reflects on the policy proposals of the EU on justice and home affairs for the period of 2010-2014.
