According to conventional wisdom, big business wields enormous influence over America's political agenda and is responsible for the relatively limited scale of the country's social policies. In *Stuck in Neutral*, however, Cathie Jo Martin challenges that view, arguing that big business has limited involvement in social policy and in many instances desires broader social interventions. Combining hundreds of in-depth interviews with careful quantitative analysis, Martin shows that there is strong support among managers for government-sponsored training, health, work, and family initiatives to enhance workers' skills and productivity. This support does not translate into political action, surprisingly, because big firms are not organized to intervene effectively. Every large company has its own staff to deal with government affairs, but overarching organizations for the most part lobby ineffectively for the collective interests of big business in the social realm.

By contrast, small firms, which cannot afford to lobby the government directly, rely on representative associations to speak for them. The unified voice of small business comes through much more clearly in policy circles than the diverse messages presented by individual corporations, ensuring that the small-business agenda of limited social policy prevails. A vivid portrayal of the interplay between business and politics, *Stuck in Neutral* offers a fresh take on some of the most controversial issues of our day. It is a must read for anyone interested in the past, present, and future of the American welfare state and political economy.

Marketing Science contributes significantly to the development and validation of analytical tools with a wide range of applications in business, public policy and litigation support. The Handbook of Marketing Analytics showcases the analytical methods used in marketing and their high-impact real-life applications. Fourteen chapters provide an overview of specific marketing analytic methods in some technical detail and 22 case studies present thorough examples of the use of each method in marketing management, public policy, and litigation support. All contributing authors are recognized authorities in their area of specialty.

The book deeply analyses the bilateral relations between Switzerland and the European Union and their effect on the former's sovereignty in the context of Europeanisation. This touches on philosophical debates on the complexity of sovereignty. What sovereignty is at stake when talking about Swiss-EU relations? This issue not only faces the elusiveness of sovereignty as a concept, but also the proliferation of hypocrisy on its presence within states. The book encounters the deconstructionist hypothesis stating that there is nothing to worry about but the belief there is something to worry about. Derrida's deconstruction of sovereignty allows indeed one to grasp the fictional essence of sovereignty based on the metaphysics of presence. The presence of self-positing sovereign ipseity is fictional since absent in the present, but spectrally present in the belief of its presence to come.

Although SPSS examples are used throughout the book, the conceptual material will be helpful for users of different programs. Each chapter has a glossary and comprehension questions. Nationalism remains one of the key political, societal, and socio-psychological phenomena in contemporary Europe. The international scholars assembled in this edited collection suggest that the use of three perspectives-supranationalism, boundary-making nationalism, and regional nationalism-may be promising as an explanatory framework for the analysis of nationalism in Europe. The volume distances itself from older dichotomies such as civic and ethnic nationalism and questions the one-sided normativity of nationalism, in particular regarding the concept of liberal nationalism. It argues that a promising approach to contemporary nationalism should reflect the multiplicity of nationalism.

research process that include quantitative research methods, from conceptualization to reporting. In five parts, the authors cover: • sampling techniques, measurement, and survey design; • how to describe data; • how to analyze differences; • how to analyze relationships; • how to interpret results. Each part includes references to additional resources and extensive examples from published empirical work. A quick reference table for specific tests is also included in the appendix. Long considered a pervasive value of Latino cultures both south and north of the US border, machismo—a hypermasculinity that obliterates any other possible influences on men’s attitudes and behavior—is still used to define Latino men and boys in the larger social narrative. Yet a closer look reveals young, educated Latino men who are going beyond machismo to a deeper understanding of women’s experiences and a commitment to ending gender oppression. This new Latino manhood is the subject of *Beyond Machismo*. Applying and expanding the concept of intersectionality developed by Chicana feminists, Aída Hurtado and Mrinal Sinha explain how the influences of race, class, ethnicity, sexuality, and gender shape Latinos’ views of manhood, masculinity, and gender issues in Latino communities and their acceptance or rejection of feminism. In particular, the authors show how encountering Chicana feminist writings in college, as well as witnessing the horrors of sexist oppression in the United States and Latin America, propels young Latino men to a feminist consciousness. By focusing on young,

high-achieving Latinos, *Beyond Machismo* elucidates this social group's internal diversity, thereby providing a more nuanced understanding of the processes by which Latino men can overcome structural obstacles, form coalitions across lines of difference, and contribute to movements for social justice.

"Using Multivariate Statistics" provides practical guidelines for conducting numerous types of multivariate statistical analyses. It gives syntax and output for accomplishing many analyses through the most recent releases of SAS, SPSS, and SYSTAT, some not available in software manuals. The book maintains its practical approach, still focusing on the benefits and limitations of applications of a technique to a data set - when, why, and how to do it. Overall, it provides advanced students with a timely and comprehensive introduction to today's most commonly encountered statistical and multivariate techniques, while assuming only a limited knowledge of higher-level mathematics.

to creating new services that have value for stakeholders (such as citizens) in terms of the social and political outcomes they produce. Innovation in City Governments: Structures, Networks, and Leadership establishes an analytical framework of innovation capacity based on three dimensions: Structure - national governance and traditions, the local socioeconomic context, and the municipal structure Networks – interpersonal connections inside and outside the organization Leadership – the qualities and capabilities of senior individuals within the organization. Each of these are analysed using data from a comparative EU research project in Copenhagen, Barcelona and Rotterdam. The book provides major new insights on how structures, networks and leadership in city governments shape the social innovation capacity of cities. It provides ground-breaking analyses of how governance structures and local socio-economic challenges, are related to the innovations introduced by these cities. The volume maps and analyses the social networks of the three cities and examines boundary spanning within and outside of the cities. It also examines what leadership qualities are important for innovation. Innovation in City Governments: Structures, Networks, and Leadership combines an original analytical approach with comparative empirical work, to generate a novel perspective on the social innovation capacity of cities and is critical reading for academics, students and policy makers alike in the fields of Public Management, Public Administration, Local Government, Policy, Innovation and Leadership.

Comprising step-by-step instructions and practical advice, this text unravels the complicated aspects of content analysis.

The idea that science is a blueprint for research, and imagination gives research its life and purpose inspired this comprehensive explanation of research methodology. The authors' decades of experience have revealed that research is a craft requiring judgment and creativity, not simply memorization and application of the rules of science. Whether one is conducting an intimate one-on-one interview or a large-scale examination of an entire society, human imagination and scientific principles of inquiry go hand in hand. To that end, this book emphasizes scientific method, but also acknowledges its critics. It covers a wide variety of data-collection techniques, but presents them as reinforcing rather than competing with one another, thus striking a balance between qualitative and quantitative methods. It

mass market. It is rather a heterogeneous market with substantial regional, country, and individual market differences. There are three major sub-markets: European Union (EU) countries, European Free Trade Area (EFTA) countries, and Eastern/Central European (ECE) countries (accession countries). Ten of these countries joined the EU on May 1st, 2004. These countries offer tremendous market opportunities for other European countries, as there is a strong demand in these ten countries for various products and services. Very soon, we will be witnessing the emergence of an enlarged Europe with high market and investment potential. This resource examines marketing practices and consumer behavior in several EU countries, plus one EFTA country and one Associate EU member country. With conceptual frameworks, case studies, analytical insights into European marketing issues, empirical data, and propositions for future testing, *European Perspectives in Marketing* presents clear, understandable writing on: outsourcing industrial products from Eastern and Central European suppliers cross-cultural differences in the effect of advertising repetition and size—with a case study from Germany the internationalization of small high-tech firms—with case examples from Norway the impact of the euro on Italian consumers' currency adjustment strategies—have they successfully adapted to the new currency by substituting their old internal price references (based on the high-denomination lira) with a new set of references that reflects the low-denomination currency of the euro? international antitrust strategies and the policies of Pepsi
